Probably ...can't see much of anything else happening of note ..

> - There will be a lot of upgrades and a short-term peak in licenses.
> But not long term growth.

Definately ....I don't really see a mass exodus from 2 meters to the HF phone bands ....come to think about it there isn't a heck of a lot going on about the 2 meter band here either ......

> - The HF/MF bands will not be overrun with more activity.

I hope that I am wrong but I do agree .... I think that the majority of those who want to be on HF would already be there .... one thing fer sure is that they ain't gonna be on CW ..... again wherein lies the true sadness ....

> - There will not be a "revolution" in technology used by hams brought
> by the new folks.

Wait a second Jim ....I know this will happen ...the no-code tech business was just too early and on the wrong bands .... give 'em 6 months and we will all be using those new whizz bang modes with a half watt into a 2 foot antenna on 20 meters ... I may dare say that DXCC will be available to all with in 48 hours with fantistic influx of MIT and CMU grads ..... I personally know 20 engineers who have avoided getting their ticket due to the CW requirement .... 15 of them called me last night to see when the next nocode HF test will be ....yeahhh right ....

> - The focus will shift to a debate about widening the 'phone subbands
> or even having no mode subbands at all.

I only want Lebensraum fom my people ..... just a little ...... besides the propagation on the freebands have been iffy at best of late ....

That is a for sure there Jim ...the NC tact will rear its head into the true reason of its existance ....we will be calling each other citizen as the guillotine falls on the neck of the CW subbands ..... as crickets can be heard between QSOs on both phone and CW ....

> 73 de Jim, N2EY

Back to 40 CW and listening for hints of that new whizbang mode ....

73 KI3R Belle Vernon Pa ....

As far as the FCC is concerned, they are just a regulatory
agency. If something serves no regulatory purpose, then
why have it?

The old tech who coached me into amateur radio insisted I support
ARRL...

Soon as he wasn't looking, I ditched it, that was back in the early
70's!

ARRL has never been a voice for amateurs, just a business for a
handful of old farts and their buddies and a strange religious cult
which ministered to the needs of misfits and eccentrics...

That's a given, a prime example is ED. Let see
what there track record is now. Zero on BPL, Zero on restructuring, Zero on
gaining New Members. sounds like a GREAT PLACE to be from or not associated
with at all. Can anyone say ARRL ineffective?

Actually I have nothing to do with the exterior lines of automobiles. I
work for a supplier developing underhood components.

Well every job I've had has been interesting when you really dive into it.

All the arguments on both sides have been presented a multitude of times.
Since there's really nothing new to be said, I'm pretty sure this will go
through in this form.

Dee:

This is going to sound like a joke (and heaven knows I NEVER
JOKE!--but it isn't...), I once heard the little windshield wiper
pumps, the ones which spray on the window cleaner were the by-product
of nasa technology adopted by the auto industry; you wouldn't know
about that, would you?

Funny, but that question has stuck in my mind for years. I had made a
mental note to ask, if ever given the chance... sometimes doesn't take
much to entertain me... <frown> I actually doubt it... I mean, the
cleaner would freeze in the tank in space, immediately freeze and/or
crystallize to ice when discharged, etc...

or, perhaps they meant the pumps used by nasa were actually for
another purpose and just adapted to windshields here on terafirma...

Not superior Mike, just more proficient as a radio operator, with more
communication capabilities than those without cw capabilities. Better able
to serve his/her community. Etc.

It's not amazing at all. The FCC consists mainly of Lawyers now a days.

Using a technical argument in a brief is a waste of time. Want proof?
Read the BPL garbage.

Let's hope not. A prospective ham can only follow the licensing procedure
in place at the time he/she licenses. The important issue now, as it has
always been, is the post licensing personal development.

> Quite frankly, that will make those so called elite a worse problem than

Yup. There's no point in grousing. Besides one can turn the old
requirements into an icebreaker just by telling the story in a humorous way.

> That I support Element 1 testing is of no consequence to the new people.
>

Absolutely correct. Of course, I'll attempt to foster learning the code and
code use. I'll just tell them about the rare and exotic DX that I've found
only on CW. And how most contests offer extra points for CW.

> I suggest that the Ham who wants to be thought of as superior establish

"John Smith"

This particular group of misfits with licenses do NOT represent ham radio.
Real hams can be found on 20 meters.

And that is where I am right now, BTW.

Dee:

Oh you and your feminine wiles. I do already hear your "sirens song"
and fear for the lives of those men you will sing of CW to...

Yes, I will bet that you can wreck more than one young man on the
shoals and dangerous reefs of CW.

Me, I will just tell 'em about the rare and luscious females I have
met in obscure and out-of-the-way pubs and the wonders I have beheld
there... <grin>

... maybe offer to buy 'em a beer and argue antenna theory with 'em...

Lawyers???

GAWD MAN, that is a joke!!!

They need psychiatrists to get these guys over there penis envy....

errr, strike that, I meant "CW FIXATION!"

ROFLOL!!!!

Insecure? So are the others who *know* how it is to be defined also
insecure?

> You are sounding EXACTLY like the "superior OTs" you decry in
> another message...like everyone MUST accept what YOU accept
> as a definition. Tsk.

Tsk indeed. My question is a simple one. Its a rough equivalent of the
US basing our economic policy on what a group of olde tyme Russian
communists think it should be. They didn't like us much at all. I bet
they had some "good ideas" on how we should run things though...

So what you are saying is that those who do know about REAL engineering
and "experimentation" won't do it unless only everything is to their
exact liking? Otherwise they will simply wait until everything is to
their exact liking?

> You two sound like an anvil chorus playing a Newington stage.

I have no such such hope. Having watched hams compare there tests as
the best and making them better hams for 28 years and still grousing
about every change along the way, I know the Class warfare will
continue

> "revolution")?

Seriously, who are you talkin to Len? You seem to be responding to half of what Jim wrote, and half what I wrote. We're two different people. So I'll reserve comment.

> Nearly ALL technical innovation in amateur radio has been
> brought on by INDIVIDUALS or individual corporations.

Once again.....

How can we have good conversations when it appears that you are arguing with me while in the next sentence you are essentially agreeing with the part that I wrote in my reply to Jim - yet you're still disagreeing with me. Oy...

Why do you allow other people to force you to not do something? There
are plenty enough horses patoots on the air. But there are plenty more
who are fine folk.

Steve is his own person. Why do you ask? Are all pro-coders clones of
say our own ex-member Larry Roll? and are all no-coders clones of yourself?

I suppose it's easier to think that way.....

No argument on that, Dan. It's one of the reasons that I support Morse testing. It's a skill that is just plain good to have. But being a better operator is no reason to lord it over others. (I'm not saying that you do - it's just for the discussion)

Len:

Dumb it down a bit man, you have them confused!

Now they think they are clones! They even suspect you of being a clone!!! (too much startrek when young I suppose.)

They want to be thought of as special, with each one having a "stark in contrast" and "special religious fervor" to CW for their own very PERSONAL and UNIQUE reasons...

I am afraid unless you are able to maintain that fantasy for them--there is going to be trouble....
<straight-faced-look>

Well, my mode of operation is not to get in peoples faces. If someone
does manage to get me mad, we usually have a private talk. Lets them
save face. Usually I just say something like "I resemble that remark!"

Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.policy

Back a long (pre 2000)while in Policy someone was tlaking about it being easy to modify one the lowpower CW transceiver kits for some or other digital modes

Anyone have some thoiught and info on this With Nocde HF comming I'd love to build something that, either stand alone or laptop asisted

Exactly. You want it all in an integrated box rather than bits and
pieces.
>
> Imagine a rig that has a 15 - 17 inch screen and a keyboard that
> otherwise looks like a typical HF rig. You turn it on and use it.

The 'DZ is almost there.

As I see it, the trick would be to have the RF part as a lapper docking
station. The laptop makers do the heavy lifting on the digital end.
>
>You arent going to use the Pegasus unless you plug it into a computer.

>
> I guess I'm having trouble making myself clear.

No, I see what you mean now. Rather than the computer and rig being two
separate entities connected by cables, they'd be one integrated unit.
Avoids duplication of function. Like in a transceiver where one set of
oscillators and filters does the job for both transmit and receive.

Fun fact: The earliest example of a true heterodyne transceiver I have
been able to find in the amateur radio literature was a CW rig made
from a BC-453. "True heterodyne transceiver" means:

1) The same tunable oscillator tunes both transmitter and receiver
simultaneously,

2) the receiver is a superhet

3) the whole unit is an integrated one-box unit (except for power
supply, antenna, headphones/speaker, and key or microphone).

What you're asking for is the next step - integrated rig/computer.

> We're trying! Seems some people don't like our ideas though! ;^)

Who would that be?

Seems to me the real problem is the divide between the digital and RF worlds. On one side you have the folks who build "radios" - the digital stuff is simply a way to get the job done. So you have dedicated custom microcontrollers in the rig to run the DDS, choose bands, do DSP, etc., but they don't do things like word processing, logging, PSK31 interface, etc. On the other side you have the computer folks with the neat software and generic hardware - but it's all external to the rig.

The big problem is that somebody has to make up the standards, and then
the manufacturers stand to lose because people will buy a piece here
and a piece there.

Of course. But people are living longer and working longer. Two careers
has become very common.

>

The big question is - why did she refi and take the cash out? What
happened to the money?

A refi to pay for improvements can be a good idea. Say you take out
$100K for a renovation, but that renovation makes the house
worth $100K more and you avoid needing to move. That's a win.

> We are almost
> finished with our mortgage (15 years), and she's still paying, > as every
> time she refied, she reset the mortgage. Looks like she'll be
> making

>
Why did she cash out with every refi? I did the refi thing some time
back to get a lower interest rate and to shorten the term.

> >>
> >
> > What's the alternative, Mike?
>
>
> Living within ones means.

Of course. But who defines what that is?

At one extreme, "living within your means" is saving up for everything
and never carrying any debt at all. Which means you'll be quite old
before you buy a house.

At the other extreme, "living within your means" is taking advantage of
every financial tool there is, to make debt work for you.

Somewhere in the middle is the best path.

> When we bought our place, we spent around
> 100K less than we were "approved" for. The banks thought we
> were nuts,
> the real estate people thought we were nuts (as well as making >for a
> smaller commission) Big deal - we bought a nice place, and have
> discretionary money for investment and other stuff.

But you could find such a place. In a lot of situations, finding a
house you can afford is a real challenge.

> And the dot.com
> folks thought we were nuts for not investing in them, too.....

Yep!

> > Some people resort to living a long way from their jobs in
> > order to pay

> > spend lots of time and money commuting, and are at the mercy > > of weather, traffic
and fuel prices.
>
> Sometimes it is just nice to not live in a city too.
>
Of course. Point is, it's a question of balance and situation.

Suppose A buys a house for $500K that means a short commute, good
schools, etc. B buys a similar house for $300K but then has to spend
hours and dollars each day commuting, puts the kids in private schools,
and has to hire out a lot of things s/he could
have DIT'ed except for lack of time.

Who is really ahead?

> >>>>BTW, those McMansions are becoming very, very hard to resell.

Philadelphia's Main Line. Where suburbia and commuting was invented
over 100 years ago.

>No doubt that they are more expensive.

Exactly.
>
> But 500K isn't really the high end around here.

Nor here. Check out realtor.com with my zip code. Make sure the
properties are in Radnor or Lower Merion school districts. Also make
sure they're houses where a ham could have an antenna, even if it's
just a G5RV.

> > And it will sell in a week.

> As I said, all those "benefits" of owning a house convince
> people to do
> extrordinarily stupid things...
>
For me, "stupid" is putting that kind of money into a house in a place
where the ground shakes every so often. Or the hurricanes come in and
wipe everything out.

>

And you are showing your real ignorance. I am far, far from being a Pansy-ass women's libber. I disagree with most Women's Liberation Theology, I disagree with the tenent of being a Women's Liberation victim (yes, I said victim); and I think most of the Women's Libbers I've met are about as misrepresentative of everyday life as they can possibly be.

I think women should be as capable as anyone else. I try not to see this as a male/female world, because I think that is very devisive and nonproductive. I will get into the ring of life along with anyone else, and I don't look to anyone else to live it for me. If you call that "bad," it's my opinion that you are threatened by that. I don't need any man's permission for thing, nor would I ever allow a man to think I did.

>
> Rather a spoiled female brat which wants all the perks of being female

Hardly. I can't think of a perk that I'm interested in.

>
> And, you are right, gays marrying makes a mockery out of marriage. Two
> butt buddies (or two lesbian lick masters) are ridiculous and should
> be give mental health to repair their suffering mental conditions...
>

Nope. That isn't right at all--at least not from my perspective. I was cutting into the tragic philosophy that you have. I notice you didn't say much about any of the shortcomings we have as people who aren't gay or lesbian. I believe you are quite mistaken about your beliefs. But, you are entitled to your thoughts on the matter.

>
> You wouldn't know a real female if she ran up and bit ya on yer bum.

Mmm. Your perverted thoughts of women's body parts is noted. And, what tricks are you speaking of? You just can't handle a woman who is quite capable of holding her own. Like I said, that thing your packin' is pretty

worthless.

>

I am not the slightest bit interested in anyone kissing my ass...right now
in particular: you. And, I doubt you have "too much" respect for yourself.
Your actions say otherwise. I'd pretty much come to the decision that you
are a man in peril with himself.

>

Don't know about the pumps unfortunately. However it is amazing some of the things that came out of the space program. The original ball point pen was one. In the form developed for NASA, they would write in any position and did not have to rely on gravity feed for the ink (more of a capillary action or some such and took very high quality ink). This was then commercialized in a much cheaper form for the public. These are the pens that would cease to write if you had the point higher than the body.

1840. NPRM - "Pro" Comments for Dropping Code

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-23 01:13:39 UTC
From: Joe Guthart <jguthart@comcast.net>
Message-ID: <YO2dnfRCpo1ZBHzfRVn-tw@comcast.com>
Source record: 113149

I am glad the FCC finally took charge of the situation and decided to drop the code requirements. Here's why ...

I like Amateur Radio and want it to be a life-long hobby for me ... however, I just plainly can't take time to effectively study the code at this point in my life. I think my story is pretty common for most of the new people entering Amateur Radio today. I am a 43 year old married father of three children. I have a background in Aerospace Engineering and my full time work is in the high technology sector working with many well known computing infrastructure companies. I got my Technician license about two and a half years ago because it was a neat little challenge for me to combine radio communications with some of the newer digital modes. Basically, it was fun, not really technical challenging, but a nice way to relax. I do enjoy making contacts on 6 meters. I would play around with some different radio, antenna, and computer configurations and started to develop a relationship with some fellow ham buddies. Soon I became limited with the VHF/UHF band and wanted to hop onto HF. Of course, by the current rules one would have to jump on and take on learning Morse Code. I am absolutely sure I could do this if I had enough time. Having an ongoing career and being a family man, doesn't really leave a whole lot of time to practice dits and dahs. I have actually played around with the code several times, but real life events and changing priorities always got in the way; not en excuse just reality. I really do see learning the code as similar to my older engineering brethren making me learn how to use a slide rule; it's kind of neat, but not really effective for me, or most folks, given the advance of other computing methods and devices.

Fellow hams need to sit back and take an objective look at this hobby because it is dying a rapid death! Amateur Radio needs me and people just like me to join in on the HF bands and to use our real world high tech expertise to help further Amateur Radio. Amateur Radio also needs my $$$$. Take a look at the declining number of amateur radio manufacturers and radios. How could any business justify spending a lot on research and development in a market that is collapsing?

Finally, I honor all those of you who are code proficient. I too may one day still be code proficient even if there is no formal testing. However, I do think that the right decision has been made by the FCC and will ultimately be finalized with little changes. This will not kill our hobby, but will inject more life into it.

73's to All,

Joe / KG4YJS

Actually Mike, it depends. If they have spoken in private, I speak in
private. If they choose to make a fool of themselves in public, then I'll
help them along and point out that foolishness in public. I've had
experience with people who will deliberately put you down in public based on
the concept that you are too polite to respond in public. I had a former
husband who was like that and I finally had to go ahead and speak out in
public to get him to stop. Chewing him out in private did no good.

look, what you think, what you expect, what you want--don't waste your time or mine telling me--get it or don't, I am here neither to stop you nor assist you...

... next, if you have to go though quoting each and ever line and/or paragraph you are responding to, and you cannot organize your thought and create your own text without intermingling it with mine--don't expect me to read it, I don't have the time to be wading though a bunch of text I have written myself--create a work of your own which can stand on its own two feet! I know you have seen others incapable of free thought and an attention span shorter than their thumb do it--but dependence on another to weed through that mess you create is way too much to ask for!

So, you proclaim yourself neither a libber nor to follow what was a conventional woman's behavior from before--ok, big deal, free world, you waste my time, don't tell me about it do it!!! I find such proclamation neither new, original or threatening... perhaps boring, I have been doing it since I was born!

I note you wish to argue, can you stay focused, what is it you are saying here, use your own text... don't cut and paste mine or others, if you can't write--take a class!

If you have anything real to say, I'll be here...

What, exactly, are people supposed to "measure up" to in ham radio? We are all amateur radio operators. None of us has a thing to prove to the other--at least not as far as I can see it. We each have our preferences, etc. I would no more expect anyone to "measure up" to me; than I would have them expect me to "measure up" to them.

That is a basic fault of amateur radio, I think--the "competitiveness" of it. I think the minute that limitations are introduced into an environment, it is set up for such a pitfall--because people cannot generally rise above it. By the very nature of the licensing structure, ham radio is a contentious environment.

Anyway, came into this late, and it chaps my hide to see people expecting others to "measure up" to, what: their importance, or something? I don't know...maybe I am misunderstanding this one post I've read in this thread.

Kim W5TIT
Not planning on trying to measure up to anything, but my own expectations of myself.

1851. Re: Time Lords always win in the end

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-23 01:39:06 UTC
From: kk4tl <kk4tl@aol.com>
Message-ID: <1122082746.122619.130280@f14g2000cwb.googlegroups.com>
Source record: 113210
Cross-posted to: rec.radio.amateur.policy,rec.radio.shortwave

Mr. Davies rises from the dead to advise us:
I am so glad that the code is going to be droped from the stupid ham licence reqirements. Now I can get on the liberty net and whatever else I want to and it will all be legel.

Aha ! ! ! You're alive and well. Thank you for checking in to let us know the rumors about your demise were bogus.

We can't wait till you check in to The Great Liberty Net. Maybe Kevin will be on the air for your first check-in. I'll advise Sir Sidney and Kind Jewish Indian and a few others to expect you very soon.

Maybe Tarzan and Doofus Jammer and Red Panty Man and Raincoat Charlie will help you with your first check-in, too.

Bro. Lawrence and Bro. Les and Y-Man and a few others will be ring-side with their sw radios tuned in for the big event, too. Y-Man will bring popcorn for everybody.

Nashville Joe will be delighted to hear the news - I can't wait to tell him.

Now stick around here - get your abuse from a much better class of people. Nimbusters doesn't do you justice.

>insecure?

Tsk. Don't try that ploy. THE FCC DEFINES AMATEUR RADIO
IN THE UNITED STATES. Period. They grant the licenses for
same.

Others merely INTERPRET what THEY THINK it is about.

>> You are sounding EXACTLY like the "superior OTs" you decry in

>> individuals demonstrate telegraphy skills...especially when
>> that skill goes back 161 years! :-)
>
> Lots of bright students don't want to learn anything that they don't
>think is relevant.

Har! That's one of the WEAKEST arguments mumbled by so many.

The FCC is NOT an academic institution and licensees are NOT
"students"...NOT even prospective licensees going for a test.

Actually, that "argument" is total bullshit OUT of the academic
arena. ALL the OTHER radio services (except maritime radio on
the Great Lakes) have GIVEN UP on morse code for communications.
It simply hasn't proven to be "better" than other modes, takes
longer, and no longer "gets through" better.

All you are doing with that "argument" is really enforcing a
sort of tribal myth, aka a "hazing" ritual. Note: The FCC
isn't a fraternity house either.

>>> BTW, isn't there a slight contradiction between wanting to attract
>>>large number of people, and wanting to attract the bright and intelligent?
>
>> How does a requirement of knowing 161-year-old morsemanship
>> skill attract the "bright and intelligent?" :-)
>
> non sequitur. I wasn't writing of Morse code.

Hello? See that Subject Line up on the Header? This whole thread
is about the NPRM in WT Docket 05-235...which is about DROPPING

the MORSE CODE TEST.

I really do NOT know what YOU are writing about...some of the time.

>>>> Yet all they whine about is the code test and that 3% of the
>>>>allocations that do require a code test.
>
>>>> Why?
>
>>> Those type hate Hams. Maybe that isn't gospel truth, but its close enough.
>
>> Poor babies...feeling "hated" are you both?
>
> Everyone is hated by someone. If a person allows themselves to be
>bothered by it, they are a poor baby indeed.

No, sweetums, YOU got the non-sequitur. Note what I said about
K4YZ: Anyone simply disagreeing with him is ACCUSED to be
HATING HAM RADIO! Search all you want through Google and you
will find him using that "phrase of hate." Do YOU want to be
like him?

>> Feeling "hated" because so few agree with your self-proclaimed
>> "definitions" of What It Is All About?
>
> If 50 million people believe a foolish thing is true, it remains a
>foolish thing.

"50 million people in WHAT?" Where are you dreaming today?

Hello? Concentrate on the thread subject.

>> Yes, it's all a big conspiracy. All those who disagree with you
>> two HATE YOU! Not only that, THEY HATE HAM RADIO...because you
>> two define yourself as "ham radio!" [you two have the conspiracy
>> thing all in a row, lined up...in your minds]
>
> Easy there, don't get the B.P. up!

Are you now a "nurse?" My "beep" is as close to 120 over 80 as an
adult male can get.

Tsk, Michael, your "visual hearing" is suffering from "visual
tinnitus" also. Or its your ego getting in the way of logical
objectivity. Try to understand that YOU do NOT define U.S.
amateur radio...the FCC does. Just because others don't accept
your interpretation does NOT mean they "hate ham radio."

>> Tsk. How little you two know of REAL engineering and
>> "experimentation." :-)
>
> So what you are saying is that those who do know about REAL engineering
>and "experimentation" won't do it unless only everything is to their

>exact liking? Otherwise they will simply wait until everything is to
>their exact liking?

No, I'm just saying you two don't know dink about REAL
engineering...or experimentation. :-)

You both like to posture as if you do, but neither does. :-)

>> Have fun in the ARS (Archaic Radiotelegraphy Society). [why
>> are you here instead of playing with your HF radios?]
>
> I am here *while* I'm playing with my HF radio.

BS. At a little after 1:30 on a Friday afternoon you should
be WORKING at your place of employment. You only work 4 days
a week? Tsk, NOT the Capitalist Way!

At the close of FCC business in DC on 22 Jul 05, the Comments
on WT Docket 05-235 are running about 2:1 in favor of dropping
the code test. [just a little reminder] Stay "tuned." On your
"HF radio" or your computer. [don't get them mixed up]

bit bit

Source record: 113211

Boy did you fall for a bunch of propaganda! Although we have fallen off the all time high as far as numbers go, we are in no significant decline. Rather we are in a period of stabilization. Some weeks ago, I had shown the hams as a percentage of population and it's been holding pretty stable. Unfortunately, I had a bit of a computer problem and lost the file. When I get time, I'll have to research the data again and recreate the file.

As far as the declining number of manufacturers goes, the normal progression in any business is towards fewer companies serving the market. Unless one takes steps to stop it, a free market economy goes through a cycle. New product with lots of new companies. Then continuing consolidation until there is a near monopoly by one or a handful of companies. Occasionally, a new company will break in but not too often. This has happened in EVERY industry not just radio manufacturing. At least a dozen car companies, if not more, have come and gone in the US and we are down to three. Dozens of computer companies have come and gone. Dozens of software companies and so on.

Dee D. Flint, N8UZE
"Joe Guthart" <jguthart@comcast.net> wrote in message
news:YO2dnfRCpo1ZBHzfRVn-tw@comcast.com...
I am glad the FCC finally took charge of the situation and decided to drop the code requirements. Here's why ...

I like Amateur Radio and want it to be a life-long hobby for me ... however, I just plainly can't take time to effectively study the code at this point in my life. I think my story is pretty common for most of the new people entering Amateur Radio today. I am a 43 year old married father of three children. I have a background in Aerospace Engineering and my full time work is in the high technology sector working with many well known computing infrastructure companies. I got my Technician license about two and a half years ago because it was a neat little challenge for me to combine radio communications with some of the newer digital modes. Basically, it was fun, not really technical challenging, but a nice way to relax. I do enjoy making contacts on 6 meters. I would play around with some different radio, antenna, and computer configurations and started to develop a relationship with some fellow ham buddies. Soon I became limited with the VHF/UHF band and wanted to hop onto HF. Of course, by the current rules one would have to jump on and take on learning Morse Code. I am absolutely sure I could do this if I had enough time. Having an ongoing career and being a family man, doesn't really leave a whole lot of time to practice dits and dahs. I have actually played around with the code several times, but real life events and changing priorities always got in the way; not en excuse just reality. I really do see learning the code as similar to my older engineering brethren making me learn how to use a slide rule; it's kind of neat, but not really effective for me, or most folks, given the advance of other computing methods and devices.

Fellow hams need to sit back and take an objective look at this hobby because it is dying a rapid death! Amateur Radio needs me and people just like me to join in on the HF bands and to use our real world high tech expertise to help further Amateur Radio. Amateur Radio also needs my $$$$. Take a look at the declining number of amateur radio manufacturers and

radios. How could any business justify spending a lot on research and development in a market that is collapsing?

Finally, I honor all those of you who are code proficient. I too may one day still be code proficient even if there is no formal testing. However, I do think that the right decision has been made by the FCC and will ultimately be finalized with little changes. This will not kill our hobby, but will inject more life into it.

73's to All,

Joe / KG4YJS

To me it is doing my best to provide a good example and a good Elmer. That is the standard to which I (and I believe Mike) hope to be able to measure up to.

"Joe Guthart" <jguthart@comcast.net> wrote in message
news:YO2dnfRCpo1ZBHzfRVn-tw@comcast.com...
I am glad the FCC finally took charge of the situation and decided to drop the code requirements. Here's why ...

I like Amateur Radio and want it to be a life-long hobby for me ... however, I just plainly can't take time to effectively study the code at this point in my life.

10 min a night Joe would get you there in several weeks ..... don't have to be an expert just 5 wpm .....

I think my story is pretty common for most of the new people entering Amateur Radio today. I am a 43 year old married father of three children. I have a background in Aerospace Engineering and my full time work is in the high technology sector working with many well known computing infrastructure companies. I got my Technician license about two and a half years ago because it was a neat little challenge for me to combine radio communications with some of the newer digital modes. Basically, it was fun, not really technical challenging, but a nice way to relax.

Exactly Joe it is a good way to relax ..... if it were work then I wouldn't be doing it ......

I do enjoy making contacts on 6 meters. I would play around with some different radio, antenna, and computer configurations and started to develop a relationship with some fellow ham buddies. Soon I became limited with the VHF/UHF band and wanted to hop onto HF. Of course, by the current rules one would have to jump on and take on learning Morse Code. I am absolutely sure I could do this if I had enough time. Having an ongoing career and being a family man, doesn't really leave a whole lot of time to practice dits and dahs. I have actually played around with the code

10 min a night for several weeks would get the job done quite well .... no problem for 5 wpm

Finally, I honor all those of you who are code proficient.

Joe .... honor the vets not people who have a simple skill ..... proficient ???? I don't have a good answer for that except 5 WPM is proficient for a 5 WPM op ....

I too may one day still be code proficient even if there is no formal testing.

Good Joe as you will be missing out on one "relaxing" mode ..... excuse me protocol ..... I look forward to seeing you on the lower edges .....

However, I do think that the right decision has been made by the FCC and will ultimately be finalized with little changes. This will not kill our hobby, but will inject more life into it.

Joe I wish I could agree with you but I just don't see how that will happen ..... unless testing is done away with entirely.
However if it does .....I will buy all a virtual beer on this group.

73's to All,

Joe / KG4YJS

Take care Joe ...73 Tom Popovic KI3R Belle Vernon Pa.

Perhaps I exxagerate. But the earlier digital rigs were not total successes. Perhaps they were just ahead of their time.

> Seems to me the real problem is the divide between the digital and RF

There does need to be a sort of meeting between the two. The digital parts of radios are a tad new and strange (but cool) to me. I've spent most of my life in the computer end of things. But the potential is there, and waiting....

Weeohhh, I'm starting to sound like a cheerleader again - Brian is going to have to come in and slap some sense back into me!!!!! hehe...

Which is why the first rigs of this sort are almost certainly NOT going
to come from YaeComWood. It will probably be from a much smaller
manufacturer who is either a start-up, or a visionary.

That bill thing. We also refied to lower the interest rate. There are
good reasons that you might refi of course.

I'm waiting for her to find out about the "interest-only" loans.

Whoah! I have several Credit cards that are paid off every month. So I essentially pay for most things with cash, excepting the mortgage, and the cars.

And I've found out a big secret. It is called discipline. When I was in my early 20's, and just having gotten married, we had old furniture, old cars, lived in a mobile home, and went without a few of the things that a lot of young people simply "have to have." And after we got credit cards, they were paid off every month, with the exception of the odd month when the re was a big car bill or somesuch.

After 10 years or so, I noticed that many of our friends were divorced, yet still paying off their CC card bought furniture and other stuff. I knew that because they were grousing about it. Cool huh? I'm assuming that many of the ones who still were together were doing the same.

Slowly but surely, we were buying new furniture - often with cash, taking nice vacations - with cash, and doing other things that our friends popped out the plastic for - with cash. Hard to imagine that paying for 10 year old furniture is ever a good idea.

Do you know what the interest rate is for paying with cash? 8^)

I don't think the CC companies like us all that much tho'..

> At the other extreme, "living within your means" is taking advantage of

Yeah, another person we know is into that. He spends a lot of time figuring out what to do, almost like a hobby for him. As far as I can figure out, he just about breaks even.

commander buzzoff:

You mean you bought georgies line?
The one where he is the only capable man of running this country?

Get real, cheney can do just as good a job...

The house speaker can too...

However, yes, I would have wrote down plans on what to do if attacked
by a foreign power....

... would have written down plans if a giant meteor struck the earth
in my absence too... and the first step in BOTH instances would be to
raise the guard and do damage/tactical assessment--if a clear enemy is
evident--strike back--if the attack was conventional weapons--then use
conventional weapons, if nuclear--respond with a minimum megaton-age
of 10X that used against us (well, maybe not 10X, but at least 2X
<grin>.) Frankly, I can't go into any more detail here, if I win the
presidency--it will weaken my position having everyone knowing my
plans... ROFLOL!!!!

I believe was being done as the pres finished his little chat with the
kids... assessment and raising the alert level... no clear enemy was
identified at that time (even now that is difficult)

... frankly, those kids are more important that a couple of
buildings--and, like you see here, takes awhile to get ahold of the
bad guys and string 'em up!

... well, I did, but I am kinda slow, by the time I passed the test it was too late to protest effectively! ROFLOL!!!

John

"garigue" <garigue@comcast.net> wrote in message news:wYadnZ6Vh8RKNnzfRVn-gA@comcast.com...

"Joe Guthart" <jguthart@comcast.net> wrote in message news:YO2dnfRCpo1ZBHzfRVn-tw@comcast.com...
I am glad the FCC finally took charge of the situation and decided to drop the code requirements. Here's why ...

I like Amateur Radio and want it to be a life-long hobby for me ... however, I just plainly can't take time to effectively study the code at this point in my life.

10 min a night Joe would get you there in several weeks ..... don't have to be an expert just 5 wpm .....

I think my story is pretty common for most of the new people entering Amateur Radio today. I am a 43 year old married father of three children. I have a background in Aerospace Engineering and my full time work is in the high technology sector working with many well known computing infrastructure companies. I got my Technician license about two and a half years ago because it was a neat little challenge for me to combine radio communications with some of the newer digital modes. Basically, it was fun, not really technical challenging, but a nice way to relax.

Exactly Joe it is a good way to relax ..... if it were work then I wouldn't be doing it ......

I do enjoy making contacts on 6 meters. I would play around with some different radio, antenna, and computer configurations and started to develop a relationship with some fellow ham buddies. Soon I became limited with the VHF/UHF band and wanted to hop onto HF. Of course, by the current rules one would have to jump on and take on learning Morse Code. I am absolutely sure I could do this if I had enough time. Having an ongoing career and being a family man, doesn't really leave a whole lot of time to practice dits and dahs. I have actually

played around with the code

10 min a night for several weeks would get the job done quite well .... no problem for 5 wpm

Finally, I honor all those of you who are code proficient.

Joe .... honor the vets not people who have a simple skill ..... proficient ???? I don't have a good answer for that except 5 WPM is proficient for a 5 WPM op ....

I too may one day still be code proficient even if there is no formal testing.

Good Joe as you will be missing out on one "relaxing" mode ..... excuse me protocol ..... I look forward to seeing you on the lower edges ....

However, I do think that the right decision has been made by the FCC and will ultimately be finalized with little changes. This will not kill our hobby, but will inject more life into it.

Joe I wish I could agree with you but I just don't see how that will happen .... unless testing is done away with entirely. However if it does ....I will buy all a virtual beer on this group.

73's to All,

Joe / KG4YJS

Take care Joe ...73 Tom Popovic KI3R Belle Vernon Pa.

Don't get chapped Kim! There are a lot of different people in the world, with all kinds of different ideas on how things "ought to be". My version of that is that people should have respect for each other, and be considerate of each other. I also like the concept of bettering ones self through acquisition of knowledge and skills, and that people should be an asset to, and to give back to their communities. I'm also aware that a lot of people think that my ideas are some sort of sugar coated dreck.

My sole failing is that I get a bit of enjoyment in knowing that that irritates the crap out of some people for some reason! 8^)

Well okay - its not my only failing. Mr Anderson and Mr Smith can probably fill you in on the others....

Okay, for them, but I'm not going to change my mind.

Geesh...

You guys are for real huh?
You think code and a radio makes you special guys?

Was the license really so difficult for you, you believe the rest of us with much different opinions are stupid and find it that big a challenge?

I started building tesla coils at ~10, I got my novice ticket and built my first single tube transmitter when I was 12, my first degree was in electronic engineering in '72... I ate this chit up... I was bored and didn't know what I wanted to be--until they invented the computer... I returned to college in 1978 and got my BS in CS in 1981 along with a BA in journalism, I completed my MS in CS in '83... since then I have always taught a night class at the local jr. college and continue to take classes at the local university to stay current and be with fresh young minds...

Get real... lay down the opium pipe and step out of the gutter!

And, I just consider myself an average guy (you should see my sister, she has all the brains in the family!)... of course, I do live in a nice neighborhood and have nice neighbors...

Well Tom Garigue:

Glad to meet you!

Interesting, I have never really done QRP, I am guilty of being a bit heavy on large amps and input power... but do find it a bit interesting, qrp.

I had developed a simple led swr meter in another newsgroup (original design--I think) and had been looking for a QRP'er to check it out... will have to look up the schematic and pics and have you take a look and see if it is any use at QRP levels... I was using it at 5+ watts out...

Well Tom, my bark is much worse than my bite and I don't hold a grudge long... perhaps we will find out what we agree and disagree on as we go along here...

One thing, I'll tell ya how it looks to me... <grin>

I hope you don't mind my anonymity here, but I have been burnt when people know my name, call and address. But I assure you, there is a real person behind this text, and only one...

Warmest regards,
John Smith

I got my Technician license about two and a half years ago . . because it was a neat little challenge for me to combine radio communications with some of the newer digital modes . . . Basically, it was fun, not really technical challenging, but a nice way to relax. I do enjoy making contacts on 6 meters. I would play around with some different radio, antenna, and computer configurations and started to develop a relationship with some fellow ham buddies."

- - - -

If you had the time to do all that you had the time to learn 5wpm.

- - - -

"Fellow hams need to sit back and take an objective look at this hobby because it is dying a rapid death!"

- - - -

The hobby will have to "die" by about 80% before the number of hams becomes the same as it was when I first got on the bands.
- - - -

"Take a look at the declining number of amateur radio manufacturers and radios. How could any business justify spending a lot on research and development in a market that is collapsing?"

- - - -

Within the past 2-3 years the ham equipment manufacturers have introduced or are about to introduce at least new top-of-the-line HF xcvrs, the least expensive $3,500, the most expensive, the Icom 7800 costs around $10.5k. Icom didn't thnk they'd sell more than 200 of them in this country. They sold the whole batch in six weeks. This is a "collapse"?! You've been listening to the wrong talking heads and you're simply parroting them and/or rationales are where you find 'em eh? .

- - - -

"This will not kill our hobby, but will inject more life into it."

- - - -

For maybe two years. Then what?

It shouldn't be difficult to modify a VFO-tuned CW transmitter to
transmit RTTY. You could do this with a varactor diode, in parallel
with the main tuning capacitor - drive the varactor with a two-state
variable voltage, to shift the transmit frequency the necessary number
of Hz.

If you have a VFO-tuned CW transceiver, which uses a varactor to
offset the transmit and receive frequencies by the appropriate
distance to generate a receive sidetone, then this transmit-offset
circuit could probably be modified pretty easily for dual-offset RTTY
operation.

You might need to retune your receiver bandpass filter to widen the
passband a bit... this would depend on the mode and the rig.

You might be able to do something similar to this with a
crystal-controlled QRP rig, but I suspect that pulling a crystal that
far with a varactor might be somewhat difficult.

This basic approach was, I believe, the preferred one for RTTY
transmission years ago, back before sideband rigs had good carrier and
opposite-sideband suppression. It can result in a cleaner RTTY signal
than you'd get if you use AFSK modulation into a sloppy sideband
transmitter.

Doing more-sophisticated digital modulations (e.g. PSK31) would
probably require starting with a sideband rig.

Opie:

Naaa, this is a damn newsgroup, I haven't the time for "speelcheek."

Tell you what, when you have a hard time grasping the concepts I am presenting, because of all the typos, spelling errors and errors in grammar--just let me know bud, I will tone it down for your mental powers and your limited ability to use logic and to extrapolate from the rest of the text to reconstruct the whole "picture."

Hey, that is what we are here for, to help each other... <grin>

... it ain't rocket science, just looks like that to some...

Oh no, we've been raided by the CB gang. DUH!! I didn't even put the
"John" and "Smith" together as being so annonymous it's ridiculous. And
Cmdr Buzz. Haven't ever noticed that User Name but, what's that mean? Cmdr
Buzz--mean something like that you command a bunch of dildoes, or something?

Dang, I got caught up in CB crap. LOL

Let's not generalize, "Opie." Some of the sharpest people I know are great at verbal communications and fail at written--at every level, I might add.

And, while Tiny John seems to have a knack for criticizing communication style while, at the same time, not being able to spell or wisely construct a sentence, he may very well have some demeaning quality...somewhere. OH, DOH!! I meant redeeming!!! ;)

Kim's text just happened to contain, "...mean something like that you command a bunch of dildoes, or something?"

Hey, is this another secret lesbian newsgroup? Is the above in code, or, just the rantings of a bunch of women presenting gripes about the size of their husbands/bf's equipment?

Maybe...but then I doubt he has what it takes to satisfy a partner
of EITHER gender!

Markie's Amateur Radio station is probably not the ONLY thing he
owns suggering from "too little equipment...!"

>
> Har! That's one of the WEAKEST arguments mumbled by so many.

No, it's not.

It's still as "real" today as it was when I was in grade school,
and probably when your grandfather was in grade school, Lennie.

I don't think I've ever met any student in any learning enviroment
that didn't want to "cut through the BS" and jsut "learn what I need to
know..."

> The FCC is NOT an academic institution and licensees are NOT
> "students"...NOT even prospective licensees going for a test.

(Oh jeeze...same Lennie crap, fermented and dropped on the door
step again...)

But Part 97 DOES mandate that the Amateur Radio Service serve as a
training enviroment for self-education and training.

Unless they set the goals, what are they to train for?

> Actually, that "argument" is total bull#### OUT of the academic
> arena.

You and Markie must have shareware'd that dictionary of
profanities, Lennie.

> ALL the OTHER radio services (except maritime radio on
> the Great Lakes) have GIVEN UP on morse code for communications.

A-hem.....

(reading back across header on top...
'rec.radio.AMATEUR.policy'....)

> It simply hasn't proven to be "better" than other modes, takes
> longer, and no longer "gets through" better.

"Takes longer" than what? You taking that Extra right out of the
box?

> All you are doing with that "argument" is really enforcing a
> sort of tribal myth, aka a "hazing" ritual. Note: The FCC
> isn't a fraternity house either.

And you're lying again. Sheeesh...couldn't keep it to even
marginally valid arguments, could you...?!?!

> I really do NOT know what YOU are writing about...some of the time.

Funny...

We've thought the same of you a LOT of the times...

> > Everyone is hated by someone. If a person allows themselves to be

No hate, Lennie.

I just don't tolerate liars.

You're a documented liar. You're more verbose and grammatically
correct than other liars in this forum (specifically N0IMD and KB9RQZ)
but you're a liar none-the-less.

> kill each othe roff sounds about right to me

Then you're as ignorant of Southern history as you are Amateur
Radio.

And that's pretty ignorant.

K4YZ:

Scuttle-butt has it that you are sleeping with J.K. Rowling.

Hey, if things don't work out, how about introducing me? I have
always been a sucker for tall women with british accents.

Besides, I have read all her novels, even the latest, "Harry Potter
and the Half-Blood Prince."

John

That's true in general Dee but what "declining number of manufacturers" - within the context of ham radio? It just ain't so. I suspect that if somebody put the effort into pulling together the actual facts they'd find that the total number of manufacturers in the ham radio market is higher today than it's ever been in the past.

Almost all of the "glory-days" U.S. supply siders went bust or abandoned the ham radio market and moved on to survive when the JA's landed 1975-1980. Yaesu, Icom, Kenwood, Alinco, Honda, Toyota and Datsun pulled off what Yamamoto and Nagumo failed to pull off their way a bit earlier. Within ham radio Hallicrafters, Swan, National, Hammarlund, Drake and Heath simply evaporated with barely a trace left in the ham biz, Collins is one which simply moved on. Not a consolidation in sight anywhere.

Off on another tangent consider the implications of another aspect: Collins offered only two basics routes a ham could use to get on the HF bands with their gear at any given point in time. One xcvr and one pair of separates. Period. Ditto Drake and for the most part Heath too. Those three companies overwhelmingly dominated the HF ham gear market for years. Today Icom is offering four desktop HF xcvrs with two more in the pipeline, Kenwood offers four, and Yeasu has seven in their catalog with another one coming. Ten-tec and Elecraft are doing nicely. Not counting all the HF mobile rigs and the equipment being developed in various skunk works. Yeah it's a free market economy cycle alrighty.

We've never had it better and it keeps getting better. These Junior Grade "the sky is falling" yahoos need to be written off as as just that.

an_old_pervert:

My gawd yes man, we are fascinated by female genitalia and boobs.

As a very young man, 10-12 years of age, they became a lifetime
pursuit of mine! I have been studying them and doing "experiments"
ever since, I am no where nearing the end of such endeavors!

I suspect they effect me in exactly the way men's genitalia and buttz
set you off...

Well, let's see...

Back in the '60s we had Collins, Drake, National,
Hallicrafters, Hammarlund, Gonset, Heath, Swan, Johnson...
and that's about it for major manufacturers of ham gear
that lasted more than a few years and made more than a
few products. Even in the above list there were limitations
because many of the above did not offer a complete line (EFJ
made mostly transmitters, for example).

Today we have Yaesu, Icom, Kenwood, TenTec, Alinco, Standard,
Elecraft, SGC, and maybe a few more. But see below.
>
> Almost all of the "glory-days" U.S. supply siders went bust or

> Hammarlund, Drake and Heath simply evaporated with barely a
> trace left
> in the ham biz, Collins is one which simply moved on. Not a
> consolidation in sight anywhere.

Yep. In some cases it was that the founder had died or retired, and the
company wasn't able to adjust to the new market reality.

This didn't just happen in ham gear - consumer electronics
went the same route. PCs followed.

> Off on another tangent consider the implications of another
> aspect:
> Collins offered only two basics routes a ham could use to get
> on the HF
> bands with their gear at any given point in time. One xcvr and > one pair
> of separates. Period. Ditto Drake and for the most part Heath
> too.

Drake and Heath had slightly more elaborate product lines - but not by
much. The point is still valid, though. The variety of new rigs today
is amazing.

Here's a game: Look up all the "100 watt class" HF rigs available today
(mid 2005). Compare to what was available 10, 20, 30, 40, 50 years ago.
I bet today's variety is the largest.

> Those three companies overwhelmingly dominated the HF ham
> gear market
> for years. Today Icom is offering four desktop HF xcvrs
> with two more
> in the pipeline, Kenwood offers four, and Yeasu has seven
> in their
> catalog with another one coming. Ten-tec and Elecraft are doing > nicely.

Yup - even the small outfits offer product lines that are more
diverse than the big boys offered in "the bad old days".

> Not counting all the HF mobile rigs and the equipment being
> developed in various skunk works.

And not counting the enormous variety of clean, late-model used
equipment that is still very much usable. Take TenTec - if an Orion is
too much and you don't like the Jupiter, there's the Omni 6 in various
flavors, its predecessor the Omni V, the Pegasus, the Paragon, and the
Corsair 2, among others.

> Yeah it's a free market economy cycle alrighty.

> We've never had it better and it keeps getting better.

The big change is the cost in inflation-adjusted dollars.

The other night I saw an ad for the Kenwood TS-520 in a 1975 QST. $629. That was back in the days when a new car was less than $4000 and starting salary for a degreed engineer was maybe $12,000.

That TS-520 was a nice rig in its time, and can still do a good job. But it won't do the WARC bands, has analog readout, no passband tuning, no ATU, no RS-232 port, no memories and no blanker. The external second VFO, CW filter, 12VDC supply and digital readout were extra-cost features ($179 for the digital readout alone!)

It did have three tubes inside (driver and finals) and you could turn off their heaters if you wanted. Of course you had to tune it up...

What's $629 from 1975 equate to in 2005, adjusted for inflation? Probably as much as an IC-756 costs now.

Or look at the SB-101 from the mid 1960s. $369 for the rig, almost another hundred for the power supply, CW filter and speaker. Say $450 - for a kit! What's that in today's dollars?

indeed although you over look 2 things

One female gential are also exceitng to me

two this just isn't the newsgroup for it

there is a whole seris alt.sex. anything you can imgaine and few things
you you see and still can't

Stevie you for that matter need ot learn a place ofr everything and
evrything in its place

This gential obsession of stevie came out when he, in looking for ways
to attack me went out on USEnet looking for shit to use, first to tried
to black mail me into silence by threatening to expose my interests
(not ashamed of them just know this isn't the place) on RRAP

You idgit. From the study done years ago, it was revealed we men think about sex every 3 to 5 minutes, I am sure the women realize that by now--our male secret is out.

And, since that is indeed true, sex permeates all our waking hours (sometimes I even dream about it), quite often while carrying on a QSO with an aussie gal--I think about it. I have thought about it when building antennas. Working on radios. Stringing coax. Reading ARRL literature (ever notice those guys never have a pin-up girl on their website? ARRL gone gay?)

Get real... hey, you aren't sexophobic are ya?

Anyway, don't give me the bisexual line, you are either gay or straight in my book--there is NOT a half-way point buddy! And, gays are perverts!

The Merriam-Webster Online Dictionary does indeed refer - both
spellings are correct:

Main Entry: focus
Function: verb
Inflected Form(s): foï¿½cused also foï¿½cussed

http://www.m-w.com/cgi-bin/dictionary?book=Dictionary&va=focussed

Not true. The ball-point pen was invented in 1935 - a long time
before space travel became a reality. NASA did spawn the invention of
a pressurized ball-point pen that would write in zero-gravity
conditions (where the regular pen was quite useless) - I assume that
you were referring to this more modern adaptation of a much older
design.

It does in their minds. They are the PCTA *Extras*!

>Was the license really so difficult for you, you believe the rest of
>us with much different opinions are stupid and find it that big a
>challenge?

Yes they do. :-)

PCTA extras are the Gods of Radio! [amateur radio, that is]

>I started building tesla coils at ~10, I got my novice ticket and

>and continue to take classes at the local university to stay current
>and be with fresh young minds...

Careful, John, careful. Gonad the Librarian (K4YZ) will come
in here and totally denounce "night classes" as something for
immigrants or "stupids." :-)

>Get real... lay down the opium pipe and step out of the gutter!

That be a bit strong, John. Tom/Garique is basically an OK
kind of guy. It's the OTHER PCTA extras in here who need
their hairy legs (covered by jackboots) shaved a bit (words
toned down considerably to be 'courteous' to the arrogant).

>And, I just consider myself an average guy (you should see my sister,
>she has all the brains in the family!)... of course, I do live in a
>nice neighborhood and have nice neighbors...

Oh, no...another segue into Real Estate and Mortgages! :-)

That's even worse than "ham balloons reaching the threshold
of space!" [which others have already done but one in here
wants congratulatory messages praising him for announcing
he is "going to do it!"]

There can be NO controversial commentary on the code test for radio amateurs in here. All MUST do it to show their dedication and committment to the amateur community! It has always been that way and it must always be! It is the heart and soul of U.S. amateur radio! CW uber alles!! Sieg heil!!!

Oops, got carried away with PCTA spirit words there... :-)

bit bit

Not my fault...they were confused when I first got here...:-)

>Now they think they are clones! They even suspect you of being a
>clone!!! (too much startrek when young I suppose.)

Careful there, "John," I watched the OS since the 3rd episode aired in '67 (was away on biz trip for first two aired). :-)

The neo-20s, neo-30s Re-Enactor pioneers of the airwaves with "CW" seem to think that ham radio is some kind of 25th Century subspace radio. HUGE technology gap. But, no different than the re-enactors of Civil War battles, Revolutionary War battles, etc., etc. in this modern age.

Back just after the FIRST Gulf War, some BS slinger came in here announcing he was a "colonel" (retired) and that his son "was 'behind enemy lines' (supposedly in Iraq) and that "he sent intel on CW" during that short, brief, brutal, fast-moving ground action. Pure BS, of course. In 1990 the military had grown out of the 1940 era of two-tube modulated oscillator and super-regen battery portables and used a VHF-UHF portable (PSQ-3) having a 1200 BPS "chiclet" keyboard that relayed through the military aviation band and orbiting aircraft (or satellites). The ground war lasted only about four days with Plan 73 Easting topping ANYTHING that famed Rommel panzerfausts couldn't hope to top. This BSing dingbat had overloaded on antiquated History Channel footage or other pipe-dreaming and wanted to be a "name" in here. Back in 1997 - before the announcement of the "restructuring" NPRM - some PCTA (that's Pro-Code Test Advocate if you weren't here back then) types still thought the military USED "CW" for communications. They don't, but I couldn't convince anyone (except a very few) of that. It upset their FANTASIES and the high regard they had for their "valuable skill" (which no other radio service wanted).

>They want to be thought of as special, with each one having a "stark
>in contrast" and "special religious fervor" to CW for their own very
>PERSONAL and UNIQUE reasons...

Some seem to NEED being "better than others" on SOMETHING. :-)

They have spiffy ready-built radios (designed and built by others) costing many $$$ or they have spiffy designed and built by themselves for less than $100 (using state-of-the-art vacuum tube technology of the 1990s). They use that wonder of all radio modes, On-Off Keying of a Continuous Wave carrier ("OOK CW"). Those PCTAs are probably very good at this "CW" and could get a nice job as a "radio op" of the 1930s era in "shortwave communications." Trouble is, this is the New Millennium and the year 2005. Ain't NO demand for such "radio operators." But, they are the BEST! :-)

Some common arguments are "CW is what amateur radio is all about!" or "CW is the heart and soul of amateur radio!" or that "'Anyone' can learn morse"...provided they devote a large part of their free time "to show their dedication and committment to the amateur community!" Whoopee on the last since that makes them top-notch radio ops for the 1930s... 75 years too late.

I've never seen the address of this "amateur community" or seen it on a map...nor is there information on how this "community" rates new amateurs...it must all be some kind of transcendental telepathic ability from the epiphany of passing a morse test.

Now, it's not all that absurd to label the CW fanatics as members of the ARS...the Archaic Radiotelegraphy Society. [not my original line, just picked up from another in here and used unmercilessly] If they want to be "expert" at a skill that is 75 years out of date, why "FB OM." Thanks, but I prefer this New Millennium just fine after pursuing a radio-electronics career begun over a half century ago, working REAL HF comms en masse on 24/7 "DX" circuits.

>I am afraid unless you are able to maintain that fantasy for
>them--there is going to be trouble....
><straight-faced-look>

Well, "that's how it goes..." <straight-faced look in return>

The fantasizers keep insisting They >>ARE<< ham radio and everybody (by damn) better well take that morse test in order to be "as good as They." As the old latin phrase has it, screum. :-)

From: John Smith <assemblywizard@gmail.com>
Message-ID: <YrwEe.458$AD4.5567588@news.sisna.com>
Source record: 113311

Len:

Do you think we should set up a website to help the hams to transition and be accepted by the CB'ers which will be flooding in like a lot of okies ready to pick cotton?

Maybe a dictionary of CB Terms and a list of the 10 Codes which are accepted for use by the CB Community? Yanno, "10-fer Good Buddy", and "I gotta go 10-100!", and "I just had a 10-33 in 'ma pants!", etc...

And, what about power requirements now? Do these hams here have "BEEG LEENEAIRS?", big enough to be able to compete with monsters which are coming in from CB? You know as well as I, those multi-kilowatt pileups on 160 and 80 ain't gonna be pretty!

And, just think, the new pirate chans will probably reach down into AM Broadcast Band... what about the hams down there listening to art bell and his con man guest--wayne green? They aren't going to like that interference yanno... <frown>

And, what about etiquette? Will these hams be able to adopt a quick retarded drawl to their voices and speech, and more important--can they do it and make it believable?

OMG, there is a lot to deal with Len, I am afraid we may not have time enough to get the hams prepared for the new way of life on the bands! Got any ideas to ease their transition period--poor buggers?

No, because it is painfully obvious you are mentally damaged.

Leo:

I found Dee's description close enough, I got my first "Parker" (the civilian adaptation of the nasa pen) in about 1969-70, so was familiar with it from that time on....

Yanno, the Russians just used a pencil, lighter, cheaper and I'll just venture to guess--their development costs much less...

1955. Monitoring Sample

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-23 19:07:09 UTC
From: loray <loray@monqreforg.net>
Message-ID: <dbu48r$l4i$0@pita.alt.net>
Source record: 113314

My qth is Bowling Green KY.

Been monitoring hf freqs today, since sunrise. Observed
following:

6670 khz, three guys talking about truck driving and where
they will stop next, type stuff they carrying, etc.

14178 khz, man & woman, never gave a call sign, talked
over a hour, used cb slang, set sked for tonight.

28422 khz, two guys talking about how code not needed for a
ham license anymore, never gave call signs, sounded like
freebanders. Said they were starting a net on this freq.

Above sampling would tend to indicate ham bands are being
invaded, and the 6 mhz stuff tells me there is little or no
enforcement going on.

73,

loray

Not to worry, however, you couldn't pass the written test anyways.

Loray:

Yeah, kinda like the fall of the "Berlin Wall", all at once and quite
surprising, at least to those hams caught sleeping, huh?

Good work, another complete ISP...

Hey, keep it up, someone will come along and create a database of
'em...

If ever you get tired, that info is already on the web though...

Who was he? Callsign? Can you post location of the FCC enforcement
action? Heard so much about this roll call guy that I would love to
who he was?

From a quick trip to the living room bookshelves -

"...the fountain pen was invented in 1884. Then in the 1930s
Ladislau Biro, a Hungarian artist and journalist, invented the
ball-point pen in Budapest. He fled when the Second World War
broke out, eventually reaching Argentina."
" With the help of his brother Georg, a chemist, he perfected
the pen and manufactured it in Buenos Aires during the war. In
1944 he sold his interests in the invention to one of his
backers, who produced the Biro pen for the Allied air forces
because it was not affected by changes in air pressure."

From Reader's Digest "How In The World?" 1990, published
in Pleasantville, NY, and Montreal, Canada, page 14.

In fiction, novelist Len Deighton's excellent 5th book in his
'WWOCP' espionage series, "Horse Under Water," 1963, is the
discovery of a ball-point pen in the submerged wreckage of
a German submarine, said submarine supposedly sunk prior to
1944 (it wasn't and was used in post-WW2 times to smuggle

contraband and heroin - the "horse" of the title).

A ball-point pen requires SOME air pressure INSIDE the ink reservoir in order for it to feed ink. Without that, there would be a partial pressure loss inside the ink tube that would inhibit ink flow. Yes, it works by capilliary action at the TIP, but that requires feeding from the ink reservoir INSIDE the pen. The ink is oil-based, of more viscosity than the ink in fountain pens (which are entirely operating on gravity and capilliary action). While a ball-point pen can operate at high altitudes much better than a fountain pen, both are inhibited in writing action in microgravity. The "Biro Pen" use by the RAF in 1944 may lead, erroneously, to its alleged ability to be used in microgravity.

Similarly, the Phase-Locked Loop or PLL was invented in France in 1932! The basic PLL principle was not adaptable to any consumer electronics frequency control applications until the 1960s and the availability of digital circuit packages. That principle led to the Fractional-N frequency synthesis and, quickly, to the Direct Digital Synthesis (DDS) now found in single chip products of Advanced Micro Devices. An offshoot of the original PLL was the "locked oscillator" operating at a multiple of a reference frequency. The locked oscillator principle was used in early TV receivers for sweep circuits but its fussiness in operation confined it to limited commercial applications.

While the ubiquitous ball-point pen is used for making notes in ham "logs," the precise frequencies noted down are kept accurate by the PLL or DDS in modern amateur transceivers.

NASA has a rather large PR department, adjacent to a large "technology licensing" department, all of which is intended to help support NASA operations' budgets. Their PR is on a higher level than the ARRL's PR, but both tend to generate a considerable number of MYTHS in their respective areas. :-)

For an example of cross-pollination of myths, the "space amateur radio" carried on by space station and (previous) shuttle astronauts is done almost entirely by no-code-test Technician class licensed astronauts. It is part of their overall task assignment (every astronaut must adhere to NASA PR rules) and relatively minor in relation to all that they must do. Contrary to the fantasy of some, astronauts did not become hams first, THEN astronauts. :-)

[we now return you to James Burke's "Connections" show already in progress...]

Fascinating! It is really tough to write with one of those PLLs.

How about filling us in on Gallium-Arsenide substrates, Len?

all I know is the sensitivity and enhanced s/n ratio of the
Gallium-Arsenide semiconductor can be used to great advantage in ones
front end... (don't know about girls though, their front ends are best
handle with bras I believe--or no bra even works for me! <grin>)

>Trust me, there are no "stupid people" in the class I will be
>instructing this fall... "C++", well, they are all gone by the end of
>the first quiz, at the latest...

You are a TOUGH instructor! Not letting students get a B,
making them settle for a C++..... :-)

I think you should insert at least one class on the morse code.
That's the state-of-the-art communications code first used in
1844 and again in 1896 at the first demonstrations of radio as
a communications means! "Tradition" and all that... :-)

For the geeks, there is Fortran IV. For the get-ahead-in-
business types, Cobol. For the girlie-men, Lisp. :-)

Then there's Bentley's Commercial Codes, a superencipherment
on top of morse code, several editions...one of the bringers
of the "five-letter-group" concept for a telegraphic "word."

By the time you get to DES you will have everyone primed for
NSA and CIA and DIA. But, FIRST, they ALL have to do the
morse CODE! Muy importante!

>Do you think we should set up a website to help the hams to
>transition and be accepted by the CB'ers which will be flooding in
>like a lot of okies ready to pick cotton?

No.

These olde-tyme hammes will do ALL the "help" just as they
have "helped" others in the past.

For example, in 1958 the FCC deallocated the 11m band from
hams and created Class C and D CB. Oh, the Hue and Cry they
raised in the US of A! Imagine, below-30-MHz privileges
WITHOUT TESTING FOR MORSE CODE! Imagine, NO TEST AT ALL TO
GET A FEDERALLY-AUTHORIZED LICENSE!!

All them olde-tymers quickly got into action to Demand Their
Big Band Sound BACK! They're still working on getting it
back. :-)

>Maybe a dictionary of CB Terms and a list of the 10 Codes which are
>accepted for use by the CB Community? Yanno, "10-fer Good Buddy", and
>"I gotta go 10-100!", and "I just had a 10-33 in 'ma pants!", etc...

I'd rather see a "dictionary" of ham terms and what they
REALLY mean...like "your sig is 599 here!" or "FB on that,
OM" or things like <spoken> "hi hi."

Or all them obscure Q codes that all are supposed to memorize
by heart or something...to sound very "IN" to radio.

<insert sound of stifled laughter here>

>And, what about etiquette? Will these hams be able to adopt a quick
>retarded drawl to their voices and speech, and more important--can
>they do it and make it believable?

They have and they do. Heard them do it over the years.
Not a pretty sound. But they don't really care HOW they
sound...they ain't in broadcasting nor do they get paid for
what they do. They are HAMS!

>OMG, there is a lot to deal with Len, I am afraid we may not have time
>enough to get the hams prepared for the new way of life on the bands!
>Got any ideas to ease their transition period--poor buggers?

None at all...for the money you are offering.

I haven't been able to "ease" the olde-tyme hammes out of their stuck-in-the-1930s-standards-and-practices rut for years. So few know "life" in any other radio service and their raddddios seldom tune outside of ham bands.

Not to worry, Yanno Smith. Ain't gonna be the "overrun" of the (HF) ham bands. All those elmering olde-tymers done discouraged so many for so long with their obsessive NEEDS to test for morse that most others have simply moved on...

The playground is safe for the Mighty Macho Morsemen. Long may they beep. Burp.

Say hello to your brother Yanni, Yanno.

From what I've even noticed of this nitwit, so far, Mike--you're a far more interesting person than he. And, I suspect, a person I'd find better to be in the company of.

Kim W5TIT

Yep Len:

Bit tough here. Gawd, I was shocked last semester... thought a couple
of girly-men had snuck into my class... on closer inspection I found
it was just some very assertive women--I let 'em stay...

Lisp for girly-men? I love that idea! ROFLOL!
<grin>

I suspect if we continue communicating in the way people usually do on newsgroups (by responding to previous text), then Little Johnny will get tired of reading and, well, he just doesn't have time to do it this way :o

Anyway, absolutel. I wasn't really miffed about the idea of "it takes all kinds." What gets me is when I am "expected" to live up to something in ham radio. I took my test(s) to get my license(s). That's it. That's all it takes. And, I hope that if anyone is perusing the newsgroup, they will get the idea that they don't have to live up to anything to be an amateur radio operator. They'll find someone just like them on the air...no doubt.

> dreck.
>

Yes, I like that idea as well. But, I don't begrudge anyone who'd rather not and/or who is happy with what they have or where they are. For instance, IF I ever get back into ham radio (other than just having a ticket), I am happy enough playing around on VHF, mostly 2-M, mostly voice. There's lots of us who are and who'll never be much interested in any of the rest of amateur radio. I've played with other modes and always come back home to VHF voice. It "angers" me to think of people who expect more than that. I expect nothing of anyone in, save what you said about just being a decent person.

>

>

I won't speak of Len. I think he's a great agitator and I love great
agitators (from an observing perspective, mind you--I can't stand being in
it myself...LOL). "Mr. Smith" is somewhat disturbed and that concerns me.
However, once on guard with someone and I am always pretty much on guard
with that person. I have a feeling he's a bit of a misfit and plays to the
meek minded--no offense to anyone.

Len:

Consider it done, Yanni will be greeted in your name...

Well, I suppose you know what you are talkin' about, you have been
their baby sitter all these years.

However, sometimes it is difficult to even know a CB'er is on band and
CQ DX'ing... some have accused the CB'er of "hanging a carrier" in an
attempt to block communications when this happens...

That isn't the case though and the hams should be warned... have them
just listen closely, if they hear the sound of drooling--that is the
CB'er attempting to communicate--when he un-keys, (the CB'er) on
phone, just have 'em go ahead with the QSO--although in this state the
CB'ers eyes are glazed over--I am still pretty sure he is able to
comprehend every-other-word or so...
<grin>

:
: Indeed. Like an msn proxy.

Except that only MSN customers can connect to that proxy. It is a
caching proxy, intended to speed web access. It is not there to
provide anonymity.

AOL runs caching proxies too, and both services log the IP addresses
of the users which go through their proxies. That way, the abuse
department can track down renegade users.

So, Woger, all any of your many enemies have to do is to complain by
the usual means, and you can be twacked down and dumped by your ISP.
You should be familiar with the routine by now after so many other
ISPs have dumped you.

I'm afraid I don't quite understand your post.

I've no problem with folks that don't wish to use code. But should you need to put it on paper, I can send and receive code (on paper) faster than most folks can type.

The best bet is something like psk-31 (or some other digital mode) if you need something on paper. Until you send and receive street names (or any names) with addresses (and numbers), you won't understand the disadvantage of phone (whether am, ssb, or fm).

Anyone can yell "Audiooooo". That is a no brainer.

I really think the Morse exam should be eliminated - and replaced with a *real* theory test.

Series/parallel dc resistance is far to easy for anything beyond general. Possibly to easy for anything beyond technician.

General should involve bridges.

Extra should involve the same stuff with ac - reactance and such.

Simple rules and safety for entry level, dc theory (including bridges, etc.) for general.

Heavier stuff with complex impedance for extra.

Just my thoughts.

Hello, John

Yep, and I'm gonna laugh my *ss off when they start using the FM band (oh - I forgot, they already are) and the AM band. I hope they clobber your ball game on dish network too ;)

The reality is that somehow there has to be some regulation. Ever been on a freeway and encountered some idiot (likely drunk) going the wrong way?

Heck, if it gets bad, I can handle it. It isn't the number of guns you have, it's who you shoot.

25 feet of bell wire on a spark plug to a lawn mower will kill the idiot running 25 kw screaming "audiooooo....". If he can't hear 'em, he can't work 'em.

That is just a very simple "for openers".

I've got more twists than a snake, but hope I'll not need them :)))

I mention only the obvious; I'll not reveal the really nasty stuff that is hard to track ..... pins in coax doesn't count; too simple.

Bring 'em on!!!! ROTFLMAO

Yep, Wayne Green was one of the founders of Mensa. Yet another way to separate the fools from their money LOLL.

I'm probably as far removed from a double-digit IQ as you are, yet, like not buying lottery tickets, didn't bother to try and join mensal. A waste of money.

You need folks with similar interests. There are janitors who are members of mensal due to their IQ. There also may be theoretical physicists. What might they have in common to talk about?

Enquiring minds and such ..... ;)

Jim:

I agree, regulation is a given necessity and only a fool would have a problem with it.

I just realized before everyone else (not really, people have been screaming it from the tops of towers, for decades), there is a need to give avg citizens a slice of bandwidth and communications here. If not, the freebanders are going to be everywhere, it is going to be a mess, and regulation impossible.

With sufficient bandwidth and access, they will all find it too easy to conform and be good "responsible" citizens and won't be forced into becoming "radio criminals." Besides, we have no room in our prisons for these people and certainly not the money to imprison, abuse and turn them into "real" criminals which will then endanger and kill us and our families and friends.

Like I say, sheer logic just dictates no other course of action...

Hello, John

Troll, troll, troll our boat ...

No need to know anything anymore. Heck, who cares if we import 80% of our oil? More fun to simply stir the pot and see who blame who when everything starts to unravel.

Hello, John

Yep, you bring up an important point. Go after the girly men! Social Security. Danger, danger Will Robinson! Condition red, man the photon torpedos. Weapons of mass destruction.

Ignore the fact that we import 80% of our oil. You know, I almost bought into the fact that Bush, along with the Saudis, was so involved in stock

with our weapons makers. Interesting, however, as to what he could do when the Bin Laudin (not sure of spelling) relatives wanted to leave the country two days after 911. Perhaps he realized that he was in deep doo-doo over the oil stuff. Could we have *dared* to do anything different? Didn't think so.

So, go after the "girly men". Better suggest an "protection of marriage" amendment to the constitution. Hey, we have a serious problem with Social Security. The AARP is a gay organization. Anything to avoid the question of the deficit or the dependency on foreign oil.

I must assume you are on the far religious right. Well, pray like heck. That should save you should the Muslim countries decide to shut off the spigot.

Mensa, my tail section.

Founders exits aside it was the "adjusting to the new market realities"
which knocked out the U.S. radio builders. GM is still trying to catch
up with Honda. Darwin prevails.

> > . . . Collins offered only two basics routes a ham could use to get

Well yeah, scarfing up used gear to get more bang for the buck has been
a ham tradition going back into the mists of time long before either of
us came about.

> The other night I saw an ad for the Kenwood TS-520 in a 1975 QST. $629.

Sounds low to me because most of my classmates started for $9-10k right
out of school in 1963. I started for $7,600 for the gummint which was
quite low then.

> Or look at the SB-101 from the mid 1960s. $369 for the rig, almost

Jim:

Can you remember when, here in America, we used to discuss matters, listen to points of view, examine every possibility--in the end, draw on everything, and finally reach real solutions, real fixes, and provide solutions everyone could live under?

Do you see how now the word "troll" is tossed out and cowards fly to hiding places to escape any association with it? Do any of us really know what a "troll" is?

Frankly, the only definition I will accept for "troll" is someone who only has the intent of causing anger, confusion and hate--for NO real purpose...

Do you really see where I do that? Have you even seen where most accused of being a "troll" really are?

I haven't!

I see where some wish to open up discussions, debate and argument--and some simply wish to stop all discussion because they are afraid they will be in disagree with the final conclusions of that--and somehow they view that as a danger to themselves...

Yanno, some of this is the strangest chit I have ever seen in my life...

How about your take on it?

Jim:

I fail to see your point, yes, I think the figure is right around 80% importation of oil.

Indeed, the by-products of burning that oil is killing us. Have you noticed the figure for smokers are way down, but lung cancer continues to climb? We are being fooled and lied to...

Build more nuclear plants here, have them lie and tell us that is safe. That we will be able to handle the waste safely? It that a viable answer?

Jim, we are already stealing all the Iraqi oil, if you don't think so--try to get some figures on where that oil is going. We are selling it directly to other countries, it leaves Iraq and ends up in india or china, pakistan, etc... only the money comes here. And, who gets that money? It isn't paying for the war. It isn't going to the Iraqis. It isn't going into my pocket...

Jim. We have lost control. A group of criminals are in control of our gov't. A group of gangsters more dangerous than ever encountered before in our history.

But, getting control back is probably going to cost a LOT of lives, is anyone ready for that yet?

Plus, I am at least partially convinced that the muslims are a grave enough danger that they will have to dealt with first--that danger may have been manufactured by our very gov't.

But they do that yanno? Distract you on another enemy, while the real enemy takes advantage of you, or, maybe not...

Who can know for sure?

Playing it safe, huh?

I run a full 1/10th of a gallon on HF. When I'm on 6M, then I run
1/5.88 of a gallon. Best of luck figuring all of that out.

Uh, well...

http://www.urbandictionary.com/define.php?term=loser

A word used by many idiots to make them feel better about themselves
while laughing at the misfortunes of many people who are many times
1. Depressed
2. Unable to raise their social status
3. Have gone through many hardships
4. Will probably be virgins for a LONG time
5. Have been tormented about being losers for all their life and don't
need to hear any more bull shit.

Yeah, I guess a Usenet troll qualifies on several of those points.

Welcome to Whine World, the line to bitch about the latest NPRM from
the FCC forms on the right.

And like other fools you attempt to keep the myth alive. In 40+ years of hamming I have never heard one ham (that inclueds the olde-tyme hammes) that complained about about the loss of 11 meters. The hams had 10 meters where they operated and rarely used 11, so the loss to the ham community was nothing.

Who was he? Callsign? Can you post location of the FCC enforcement action? Heard so much about this roll call guy that I would love to who he was?

He was Bob, KT4TR, had a signal to die for the times I heard him on 313 and 75m. Don't know where to find the stuff about the FCC action, it was a few years ago. I remember his trip to Spartanburg that precipitated the subsequent reading of court records that resulted in his alleged problems with the FCC.

Seems that KT4TR had it in for WB2OTK for some reason. Don't know all the particulars or reasons behind the hostility. Perhaps someone else could fill in the blanks here. Mr. Davies seemed quite involved with those goings on. While KT4TR was taking it to 'em on the airwaves, Mr. Davies was maintaining a website quite hostile to Mr. Whiten, WB2OTK.

> Geesh...
>
> You guys are for real huh?
> You think code and a radio makes you special guys?

Ah com' on John ....did you ever hear me say anything about CW being special ..... in fact the older I get the less "specialness" means to be ..... as if it really meant anything back then .....

>
> Was the license really so difficult for you, you believe the rest of
> us with much different opinions are stupid and find it that big a
> challenge?

Never studpidity ....motivation .... well based on some of the arguments I have seen here and in my ham d'jour life ....it just seems that if someone really wanted HF privlidges then suck it up ...study a bit ...pass and have the ritualistic back yard key burial ....then get on with life ..... but that apparently will not be necessary now .....no carping ...just fact ....and I will welcome anyone to the bands and if they are on CW without being tested ...no big deal. I call that a win for band useage which we need and for ham radio in general ....

> I started building tesla coils at ~10, I got my novice ticket and

Gee John ...then why are your posts so bizzare ??? I really don't like to prejudge anyone but your comments over the last several months really don't reflect the above ...I am sorry if I say this but I am a bit surprized .... I deal a lot with "old timers" in my profession .....and I find them interesting and their journey through this life more so in a positive rather then a negative ..... Also comments about people with problems, disabilities and diseases don't fit.

> Get real... lay down the opium pipe and step out of the gutter!

Huh .....???? oh well ...never tried the stuff thank God but I do like a couple of beers now and then ....

Hello, John

Well, troll is when someone starts a thread with the intent of starting a flame war.

Since the Republicans came to power and some of the stuff I've seen, I'm willing to troll now. Not much matters anymore. The cw/no cw threads - which, from what I've seen, means "I don't want any tests".

I seriously don't care that much anymore. I'm seriously thinking of moving to Florida and simply spending my days in the sunshine (and pool LOL). Let the freebanders have at it. Don't call me if there is a problem; I spent my time in 'Nam and figure the no-test folks will have all the answers anyways.

There are no discussions anymore as politics is controlled via the various programs concerning national security and the sheep follow the leader regardless. Why study the calculus when you can pick up a calculator (never mind I've caught one kid making a mistake even using a calculator - if the owner looses his butt, that's his problem, not mine)?

As to communications or electronics, it won't matter. I remember going down to a television station over 10 years ago and being told I'd have to join SMPTE (I think - Society of Motion Picture and Televison Employees .... not sure) and was shown a "difficult" test I'd have to take. Same damn test I passed as a teenager in front of the FCC to get my 1st class radiotelephone license. I was also a full member of that organization when I was designing UHF translator stations in 1971.

Unfortunately, I reset my newsgroups as they were taking up considerable space and lost the start of this thread. Unfortunately, I have not been able to engage in any reasonable discussion in quite some time myself and I've about resigned myself to avoiding the flames and simply basking in the sun.

I'm sure some enterprising individual will find a way to blame the folks that finally got tired of all the mess. Do let me know if Bush ever gets a clue or the No Test International folks ever think there might be a problem with letting everyone on any frequency they desire.

I do not believe you ever started a thread with the intent of causing grief, but I've had some question as to some of your posts in the middle of threads. Then again, I've been getting a bit testy of late myself ;)

I heard that AOL died in London. The cell phones overload. Of course, everyone could be assigned their own "frequency" (rather than a free for all "freeband" agreement). With something like 6 billion folks in the world, that would take 6 GHz of channels 1 Hz wide. I don't think one can push

much information through a channel 1 Hz wide. Also, no one could have a very useful antenna much below several hundred KHz.

Maybe the answer is let everyone drive on whatever side of the road they want?

LOL - no, John, it isn't you. I'm just getting a bit tired. Perhaps I'll go to bed. I'm seriously considering moving and trashing the computer. Retire and go fishing, perhaps. I might even invest in a beam and a good hf rig. I've never found a lid on cw and have had many interesting discussions on cw (as well as 440 MHz fm).

> still trying to catch
> up with Honda. Darwin prevails.

Darwin got some help in those areas, though. Detroit spent the '50s and
'60s building big cars and was completely surprised by the oil
embargoes. American electronics manufacturers, run
by "PROFESSIONALS IN RADIO", didn't know how to compete with

Japanese products. The rest is history.

Yup. Or converting surplus - military or otherwise. Hams were doing
that in the 1920s with surplus tubes - WW1 surplus tubes....
>

Inflation in the '60s was quite low too until the end.

> > Or look at the SB-101 from the mid 1960s. $369 for the rig,
> > almost
> > another hundred for the power supply, CW filter and
> > speaker. Say $450 -
> > for a kit! What's that in today's dollars?
>
> Beats me but the point is there.

http://www.westegg.com/inflation

says:

$629 in 1975 inflates to $2355.99 in 2005

and

$450 in 1965 inflates to $2681.16 in 2005

Either of those will buy quite a bit more rig than a TS-520S or SB-101.

John...you'll have to forgive Markie...He was a regular in this forum in the late 90's, then he blew off. Then we only had Lennie and brain as our regular miscreants, but at least they can spell and put a sentence together.

Markie has serious gender identification issues and as a consequence of those issues, any discussion that even remotely sounds like it's gender related get's him all wound up.

I am sure you've also discovered by now that Markie is an absolutely unrepentant and actually quite proud pathological liar. His previous tales of his being a drafted "Colonel" in the US Army Chemical Corps and subsequent unravelling of THAT tale was absolutely hillarious. (In as much as the draft ended in the 70's, Markie would have had to have been about 8 years old when he was "drafted"...!)

Watch him splash around in his little mudhole of lies. It's quite entertaining!

I do.

But I have fun, too.

Rubbing your nose in your silliness is recreation. Not much
recreation, though, because you make this almost too easy!

> > That's why I won't let you lie uncontested.
>
> no your obsesstion is why you keep this up

I see.

And what is the part that YOU keep up?

To the best of my knowledge, no one is there twisting your arm,
FORCING you to reply to a single word of this...

> > Then what "freuders" do you refer to?
>
> you mostly

Then since you insist that I am one, please tell us what a
"freuder" is supposed to be...

> when you carry on a multiyears feud over morse code basicaly

I'm not fueding over Morse Code.

You, Lennie and Brain may be...I'm just wating for the FCC to make
up my mind for me. I'm still proficient to about 35WPM...more in the
contests.

Nope.

The precise frequencies are "kept" by the station licensee who
ensures that his or her station is kept in good operating order.

It is additionally noted that Leonard H Anderson had nothing to do
with the creation for the aforementioned PLL or DDS that he's
attempting to brag on.

> NASA has a rather large PR department, adjacent to a large

Some of them certainly do. Witness Owen Garriot, W5LFL. The
FIRST Amateur-Astronaut to operate from the Space Shuttle.

I know that facts aren't your forte, Lennie...Sorry to bust your
rant.

Nope.

You see, Markie, if you understood the language, colloquial OR
traditional, that you're abusing, you'd know the history and the
integration of the term "do you have the stones"...?!?!

YOU think it's got to due with male anatomy, but that's only
because you're gay and it's a lifestyle issue for you.

> and do make up your mind wether i am a coward or brave

Oh, you're NOT brave...Stupid...Confused...Functioanlly
Illiterate...All of those, but "brave" is not an adjective that fits
you.

I'd be happy to be sleeping with her investment banker!

> Hey, if things don't work out, how about introducing me? I have
> always been a sucker for tall women with british accents.

Ditto.

Have you seen the movie "The Girl In The Cafe"..?!?! It's a campy May-December romance thingy...The female lead is a bit on the, uh..."common" side, but she's got this cute-as-a-bug accent. I'd be glad to let her lay next to me whispering naughty things in her cute little way!

> Besides, I have read all her novels, even the latest, "Harry Potter
> and the Half-Blood Prince."

"Half-Blood"..??

What's the other half? A Big Mac? =)

"COHEANT"...?!?!

You can't even spell words correctly when they are already right
in front of you!

"...makes you title..."

What an I D I O T ! ! ! !

It was never about CW/Morse code, just the effort required to learn it.
Requiring anything for which there is no open question/answer pool will
generate the same bellyaching, including the Smith Chart.

Nope.

That you are.

You've even admitted to BEING a liar.

So why do you recoil from it now...?!?!

> > > > What are you going to do about it?
> > >

Nope.

Why do you call your OWN admissions a "lie", Markie...?!?!

> > > you are sick and in desperate need of help
> >
> > Not according to any licensed physicians I know.
>
> you may be right there, I am sure like most sick folks you can cover it
> to some extent

Cover what?

> but you are sick and in need of help

No, I'm not.

Why do you keep making assertions of fact that are clearly
unsubstantiated, Markie?

The first time is an error.

The second time is a mistake.

The third time is a lie.

You're on 357,986,555,089.

Steve, K4YZ

Bert:

Interesting idea.

No question pools!!!

Maybe apply that same principal to colleges. Don't put any relevant material necessary to pass the course in the textbook. Then have the instructor NEVER speak of anything which will be on the test.

Now that would be a real test of what the students know!!! Teach 'em nothing and make the test DAMN DIFFICULT!

I just love the original ideas people come up with here...

John

> got it.

more stevie lies

and more stevie covering his lie by cutting posts without document ing
the cut

you keep claim you are licenced

you are not

I am not licenced never claimed to be

>
> > It is plain to see your obsession with my and what I may do with my
> > genitlas at any given time
>
> No..YOU are obsessed witht he idea that others are obsessed with
> it.

nope you are the one how keep bring them up

not me

>
> I just call yuo for what you are...A deviant.

you are just lying stevie

>
> > > > > > > Have you performed a pateint assessment?

>
> Nope and nope again, Wimpo.

I have prefromed a pataint assement

i have read you shit I read mucyh of the shit you have posted while I
was here
and found you obsessed with me at times I hadn't posted in years

you are obsessed

>
> > > > > > > Are you licesed to do so?

> > > > Sure I am.
> > >
> > > Another lie Stevie
> >
> > Nope.

you have no license to make the statements you have

you are ham shrink same as me

>
> > You are an LPN with delusion of granduer
>
> Half right.

you mean you have been lying about being an LPN

>
> I'm an LPN. With over 20 years of experience and EMS credentials.

then I am fully correct

like a lot of Nursie they get too bigg for their pants, and start
claiming powers beyond their ken

as you have done in claiming you could disanose that someone did not
have a hearing problem meeting them at a VE session

indeed you claimed you knew the MD was wrong

>

I know the history of the south the north and the enitre country quite
well

I have seen the south but in the near current frame of time and over
the past

The south is like regions of the US fairly well devided, esp over race,
but class as well

Jim:

Your definition, "Well, troll is when someone starts a thread with the intent of starting a
flame war."

I don't think that happens often.

Indeed, it is EXACTLY the opposite which is REALLY occurring. Here is how that really functions and ends up being blamed on the poster:

"If you start a thread on a subject which is unpopular or I do not agree with--I will flame war there and accuse you of being a troll which provoked it all--and my flames!" (devil made me do it statement)

I can see how some are confused by these two totally different situations though, unless you look closely the two can be confused.

Perhaps we could call such, "Terrorist Flame War Threats" and report 'em to homeland security!!!

ROFLOL!

John

K4YZ:

Well, we may have all been guilty of that a time or two, but just might take some of longer to learn from our mistakes--tell ya the truth, I have been dishonest with a couple of women early on in my life to attempt to impress 'em. I suppose I can forgive another for such silliness...

On the gender identification problem, that IS and DOES SEEM TO BE a real problem and stumbling block for him. I think he is full well to wage battle for decades in the attempt to get people to accept him which consider such a "lifestyle" (and I use that word loosely) PERVERSION!!!!

The militarys' suggest of, "Don't ask, don't tell..." is about the best I can accommodate such people with...

Jim/N2EY was the original "No Test International" proponent.

But the Cecil/Jim proposal has a serious flaw. Few if any VE's have
the ability to differentiate a right solution from a wrong solution.
They might need to have Len@ieee.org look over their shoulder's. Hi!

It came down to a cost/benefit analysis. None of the services had the
time or money to continue training people to emulate a modem. As an
antiquated radio service, amateur radio can force people to do things
that no other service is willing to do.

commander:

Well, now they have virtually lost it all--at least all the bands to CB'ers...

I can see how that will now prompt them to whine and pee all over themselves...

Awareness, denial, acceptance is the progression with which new ideas and methods are adopted--most amateurs whose greatest accomplishment in life has been to pass a CW test and grab a license will now be stuck in the denial phase a long time now... they just lost their whole world, image and ego!

Even the slowest of citizens will now realize that being an amateur has never really been of any real merit or standing--and darn CB'er can use a damn radio!

>> "50 million people in WHAT?" Where are you dreaming today?
>>
>> Hello? Concentrate on the thread subject.

Okay, I'll slow down and explain.

See, like someone goes like: "Feeling "hated" because so few agree with
your self-proclaimed "definitions" of What It Is All About?".

Then like I go like: "If 50 million people believe a foolish thing is
true, it remains a foolish thing.

It's like if so few agree with my definitions, its like tons and tons
of people don't agree with my definitions, you know - totally.

So I was going like: those tons and tons of people, like maybe 50
million of them, don't agree you know?, and like maybe I think they are
like wrong, and like maybe if I am not wrong, like maybe they are still
wrong, and like just cuz theres like tons and tons of them, that won't
like make it right, you know?

Whew....

What do you mean "nope," opie?

BWAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!!!!!!

What you use then, big PCTA extra of the Double Standard, a
couple crates of crystals?!?!?

> The precise frequencies are "kept" by the station licensee who
>ensures that his or her station is kept in good operating order.

Yeah, riiiight...the extra can do "laying on of hands" and
instantly tell (by magic of some kind of telepathy) what
frequency he is tuned to....

BWAAAAAAHAHAHAHAHAHAHAHAHAHAH!!!!!!!!!!!!!!!!!!!!!!!!!

> It is additionally noted that Leonard H Anderson had nothing to do
>with the creation for the aforementioned PLL or DDS that he's
>attempting to brag on.

Tsk, tsk. The fire in your hate-filled eyes is robbing you
of any comprehension of what was written.

NOBODY was "bragging" about PLLs or DDSs...just pointing out
that they exist. The PLL was first innovated in France in
1932. The ball-point pen was innovated in Hungary in the
1930s. You don't see any connection chronologically?
No, you can't...you are WAY too busy trying trying to trash
those who won't agree with you.

>> NASA has a rather large PR department, adjacent to a large
>> "technology licensing" department, all of which is intended
>> to help support NASA operations' budgets. Their PR is on a
>> higher level than the ARRL's PR, but both tend to generate
>> a considerable number of MYTHS in their respective areas.
>
> NASA pays people to write "MYTHS"...???

Again, you FAIL in reading comprehension...but, what the hell, you've probably never read "NASA Technology Review" issues, either. :-)

NASA Public Relations TAILORS and CRAFTS their words very carefully...as ALL good marketing types do. They can CREATE the IMPRESSION of things in their favor...as what ALL good marketting types do. All they have to do is some word re-arranging and some convenient OMISSION of certain things and those who read/listen/view what they are talking about will do the "myth creation" for them. Examples:

"Ball point pen invented by NASA." Not so...it was invented before NASA existed.

"TANG" (the breakfast drink) came out of NASA as a drink for astronauts. Not so...it was invented for consumer use and to make money.

"Velcro was invented by NASA" to hold things in place in zero gravity. Not so. It's obvious that it does so but the invention was for the clothing industry.

"Teflon was invented by NASA" to withstand the rigors of spaceflight, etc. Not so. Fluoroethylene chemistry came out of needs of the Manhattan Project to use in extracting uranium and plutonium...which was later commercialized by DuPont as a polymer.

ALL of those common myths are further reinforced by the everyday journalists and news editors who simply take news copy and "run with it" in their media. Everyone sees it in print (real ink on real paper) or sees it on TV (TV never lies in its news)...and they accept it as "fact."

>> For an example of cross-pollination of myths, the "space

>
> Some of them certainly do. Witness Owen Garriot, W5LFL. The
>FIRST Amateur-Astronaut to operate from the Space Shuttle.

Believe at least one thing: There's NO such thing as an AMATEUR astronaut. Each and every one of them is a professional in what they do. If anyone wants to read DOCTOR Garriott's bio, just go to:

http://www.jsc.nasa.gov/Bios/htmlbios/garriott-ok.html

This 74-year-old FORMER astronaut has got a resume there that makes ordinary terrestrial mortals look puny. Doctor Garriott has been a PROFESSIONAL in aeronautics, as both astronaut and academic, all his life. It should be obvious to anyone reading that bio. To you, all you can read is a tiny paragraph about Skylab 3 (first flight of only two) and using an amateur callsign.

About the only space flyers who come even close to the "amateur" description are the two with money who rode on Russian rockets and they had to go through a rigorous half-year training program to be allowed to do so. The two pilots of private-venture Space Ship One were long-time professionals prior to being hired by Scaled Composites, Inc.

> I know that facts aren't your forte, Lennie...Sorry to bust your
>rant.

The ONLY thing YOU "busted" was - once again - that you don't know dink of what you talk about. You are a poseur, a fraud, trying to make yourself look like somebody "important" when you don't know dink, haven't done dink in space OR aeronautics.

Quit trying to read the ARRL "news" bulletins as if they are the primo word on "radio." That will help you overcome your quite-obvious IGNORANCE. Maybe. I don't have optimism that you can...

LenAnderson@ieee.org

Malicious interference to anyone is still malicious interference.
By the existing regulations. You are the one with the license
that can be pulled, NOT the "25 kw" freebander.

Where do you find this mythical freebander running TWENTY FIVE
KILOWATTS?!? [only in newsgroups is where...]

>That is just a very simple "for openers".
>
>I've got more twists than a snake, but hope I'll not need them :)))

>I mention only the obvious; I'll not reveal the really nasty stuff that is
>hard to track ..... pins in coax doesn't count; too simple.

You aren't thinking sneaky enough. Try benign acts...such as a
very short wrapping of cellophane tape on any PL-259 plug
center pin. With only one turn wrapping it will insulate that
pin very nicely. Using transparent tape instead of translucent
"magic" tape will make it less easy to spot.

Or get an old auto of the 50s or earlier, do an insulated
wrapping of one of the old plug wires to the existing radio
antenna on the car. Radiates malicious interference very
nicely. If you are caught, blame the auto repair place.

Not to worry. Riley H. knows where to send the federal
marshalls to go get ya...

You two have it nailed and in public view.

These olde-tyme hammes have been in hamme raddio for decades,
working 8 hours a day, 6 days a week, at their ham rigs,
living the fantasy of being top-notch "radio operators." :-)

They want THEIRS (rightfully theirs by divine right or
something...the gods of radio talk to them when they
don't work DX on HF with CW. Ain't no room for "druthers."

Hence those that just want a HOBBY, a fun relaxation, a
recreation involving various radio arts, are MISFITS who
don't deserve a damn thing. :-)

The Mighty Macho Morsemen >>ARE<< ham radio...as the ARRL
has always implied in print for yarns and yarns. Ask them.
After looking down their noses they will scornfully reply
OF COURSE WE ARE in stentorian tones of immodesty.

Mighty Macho Morsemen have always considered "consensus"
to be equivalent to "capitulation" (to their desires).
Those who give in to their personal wishes are "good for
ham radio" while those who object are "bad." Simple rule.
[simple minds] [selfish minds]

>
>And like other fools you attempt to keep the myth alive.

Nope. That's not a "myth" but ACTUAL FACT. Look at Broose
and his constant "CBplusser" snarlings. "Lid" like operation
is commonly referred to as "CB" activity. All kinds of
nastygrams are sent when olde-tyme hammes have a need to
cuss out someone. :-)

> In 40+ years of
>hamming I have never heard one ham (that inclueds the olde-tyme hammes)
>that complained about about the loss of 11 meters.

Tsk. You obviously don't get out much and your hearing is
way worse than Coslo's.

Go to the Comments at the FCC ECFS on WT Docket 05-235. All
them olde-tymers complaining about ham radio gonna be "worse
than CB!" (along with the threats of the sky falling, etc.).

> The hams had 10
>meters where they operated and rarely used 11, so the loss to the ham
>community was nothing.

Yeah, yeah, tell us all about olde-tymer. In 1958 you were
just another pretty face on the TV tube (in black and white)
doing adventures in space. Very heroic. Your limited fan
base must have swelled your cranium past the ability to sense
ordinary terrestrial hobby activities in radio.

Buzziebaby, be prepared to go digital by 2009. And get some
better writers, okay? Your scripts in here are a POS.

. . mmmm . . maybe mine was a 24V unit . . heh . . The only mods I
made to my 80M version to change it from a military version to a
Novice ham version were (1) rewired the filaments (2) yanked the the
tubes in the calibration circuit and circular filed 'em (3)
disconnected the roller inductor loading coil from the PA tank circuit
(4) fired it up and used a flourescent lamp tube taped to the antenna
wire to find the "hot spot" along tank coil and soldered the end of the
wire to that spot on the coil and took it to the airwaves.

Slick. Love those little Java calculators.

> and
>
> $450 in 1965 inflates to $2681.16 in 2005
>
> Either of those will buy quite a bit more rig than a TS-520S or SB-101.

I did a "reverse" run. I paid $500 for my little TS-50 HF mobile xcvr a
few years ago which is far more radio than either of those boat
anchors. I would have paid $99.25 in 1970. Which is about what one of
the early clunker CB SSB xcvrs cost in those days.

If I paid $500 for it in 1965 it would be $2,900+ today, I coulda
bought an S-Line for $2,900.

Ahhh . . the "good old days" . . but enough of wallowing in 'em . .
ONWARD!

... search the net out there...

... there are 50KW monster mobiles in big rigs running multiple industrial alternators...

... they are more show than go (even the FCC would take interest in those rigs if they about all the time!), and you see them at the monster RF get togethers back east in Tennessee and surrounding states...

I have walked though such a "meet" (they are kinda like "car shows") before with a 4 ft. fluorescent tube, amazing, the ether is filled with RF!!!

Brian, ya have to cut "john smith" some slack in here...he
hasn't seen the Battle Royals of the Mighty Macho Morsemen
against the no-code-test forces of evil in older days. :-)

Absolutely the BEST in my mind was the wonderfully-done
parody of No Code International called "No SSB International"
and 'sponsored' by Jim Kehler, KH2D. A whole website devoted
to entirely destroying any no-code-test movements. Alas, no
more "No SSB International" but NCI is still chugging right
along. Kehler left Guam and moved to the states, hasn't been
in here much, but his satirical bite can still be felt on
his own little home page.

Jimmie Noserve tried his best satirical rant with the "NTI"
thing and drew a blank. He was trying to pick up on Smith
Charts as a diatribe-weapon, falling short on his attempts
at making such knowledge sound foolish.

"Smith Charts" aren't ham lore. Smith Charts are a terrific
aid in seeing solutions to complex impedances over frequency
but Phil Smith's wonderful diagram came out of pre-WW2

testing of telephone lines! Telephony involves voice and
the Mighty Macho Morsemen will have none of voice! That the
entire RF industry picked up on Smith Charts, used them, even
had the format hardwired into test instrumentation, is beside
the point. Jimmie, a supposed professional in electronics,
despises professionalism, the rest of the RF world, and any
no-coder within spitting distance.

>They might need to have Len@ieee.org look over their shoulder's. Hi!

BWAAAAHAAAHAHAHAHAH!!!!

Brian, I doubt there's enough money in the ARRL treasury to
pay me for that task! :-)

The FCC is NOT an academic organization and its "tests" are
just regulatory tools, a part of the licensing process the FCC
uses to regulate ALL of U.S. civil radio. It's no more than
that...but lots and lots of hams are into the FANTASY that it
shows some "expertise" in radio. Such test passings show
ONLY that an individual has passed a few tests. Note: Some
like to puff up their chests and say "they are authorized
by the federal government(!)" as if they were junior G-men.

Privatized radio operator testing is a part of NOW and has
been for several years. [privatization of other government
regulations has been the norm too] As such, multiple-choice
questions are the logical choice for private testers...avoids
the need for testing the testers on their ability to discern
correct written responses from wrong ones. That avoids all
the layering of beaurocracy that so many bitch about. The
multiple-choice format has been around for decades and there's
nothing actually wrong with it (except in the newsgroup
environment where everyone seems to be an "expert" on testing).

Further, the FCC only states that a MINIMUM of ten questions
for each of the required questions per written test element
for a class be generated. There is NO LIMIT on the maximum
number! The questions (and answers) themselves left
ENTIRELY up to the VEC Question Pool Committee. The VEC QPC
is made up ONLY of licensed radio amateurs. By law.

Those who piss and moan about "today's multiple-choice" need
to contact the VEC QPC...their fellows in the 'amateur
community.' Open Pools are NOT going away as long as
privatized testing exists. All that "memorization" BS is
just BS by the olde-tymers who probably haven't taken a
single written test of any kind in over a decade (except
maybe a driver's license thing, depending on their state).

Could anyone "memorize" a thousand questions...along with
the single correct answer against three other incorrect
answers? Might be possible for stage actors, I don't know

for sure. I'm only acquainted with a few TV and screen actors of less than stellar rank...they have learned to memorize dialogue LINES, at least enough for a day's shooting (perhaps 6 to 8 pages of standard-format script).

So, given a thousand questions, a thousand correct answers, and three thousand incorrect answers, I doubt that all but a rare few eidetic-aptitude humans could "ace" such a test. That "memorization passing" excuse used by so many is just BS...BS of low quality at that, lots of smell but of little value.

U.S. amateur radio is a HOBBY, not an occupation, not some vital service to the nation. I just wish that more would treat it as such instead of wandering off in the haze of their clouded imaginations about their "federal authorization" license and imagined self-importance.

bit bit

So just give the students a pool of questions, some of which will be on the test, then give them all the answers to those questions. Sure wouldn't want to be treated by an MD that passed his exams that way.

>imagine it

You can see pictures of how it used to be at:

http://kauko.hallikainen.org/history/equipment/

Go to the sub-heading "Stations" and click on "ADA." It's about
an Army station in the 1950s whose transmitter site at over
three dozen HF transmitters ranging from 1 KW to 40 KW output.
Station ADA was only the third largest in the worldwide Army
network at the time. I was there for three years and most of
the pictures are from my own camera. All vacuum tubes, of
course, this was in the 1950s.

The other document under "Stations" is from a brochure done
up by the same battalion I served in, but ten years later.
All Signal Corps photographs.

Control was transferred from Army to USAF in 1963 and the USAF
terminated the station in 1978. HF was becoming less and less
used by the U.S. military in the 1980s. Civilian use of HF
was downsizing and the AFRS->AFRTS worldwide broadcasting went
to comm satellite relay. Even VOA downsized in that time and
most of those HUGE cabinets of power went to the scrap heap.

Some of the old stand-bys are still there, such as WWV. For
a look at the transmitters of WWV, WWVH, and (for 60 KHz)
WWVB, go to http://www.nist.gov and click the "Time and
Frequency" heading. WWVB puts out 50 KW and keeps thousands
of clocks and wristwatches on time every night...automatically.

bit bit

And where in that do you get they are somehow upset about losing 11
meters? It is a FACT that the cbers turned 11 meters into the sewer pit
of radio.

And again, how do you see in that anyone complaining about losing 11
meters? No, most hams don't want the ham bands to become what the cbers
have made of 11 meters. No complaing about losing it, just don't want
the ham bands to become like it.
>
>

The hams hardly used 11 meters. In 1958 I was listening to hams almost on a daily basis. Sure there were a few at the time who may have complained a bit, but you attempt to make it sound as if half the ham community is still upset. Not so lennieboy, the hams never missed not having 11 meters. If they knew what a sewer pit of radio communication the brain-dead cbers would make of it, they probably would have raise a real stink.

>

So lennieboy thinks that by getting to walk by a high power Army radio installation sometime in the 1950's and taking a few pictures made him an expert radioman. Kinda like how he blusters on about ham radio "Morse Men".

I don't know about 25 kw amps, but amps (leenyers) in the
5 kw to 10 kw range are in wide use and easily obtained.
Amps below 5 kw are as easily procured as just walking in
the store, paying for it and walking out. Now don't go getting
your ham op blood pressure up! Any amplifier should only
be used in a lawful manner and only when in full compliance
with the law and FCC rules & regulations. My point is the
illegal market has a glut of very high power amps. Buddy up
with some local cb-freeband ops, you can learn a lot they don't
teach in the schoolhouse.

It is true that almost everyone outsources. Intuit also does. I have had very good support people from India with impeccable English and good skills and I have also had horrid ones who could not understand or speak English and did not know what they were doing.

I was told by one TS guy from India... one for Intuit that they are really trained and it is a lengthly process etc. etc. He was excellent. So I think each company decides how much to invest in this outsourced TS. Even if they don't outsource... if they don't train then it is garbage... It is the company's ethics rather than merely outsourcing per se.

I agree with you. There aren't any technical people at the FCC to monitor things, most of the folks are politicians who don't give a rat's ass.

As far as content and lack of ID, tune around 75 meter phone late at night any night, you'll hear that and much much more - animal noises, farting in the mic, lots of well behaved adult stuff. Most of these guys have been hams for years. Thank goodness it isn't all those no-code folks clogging up the bands. That would be horrible.

No rights?

Hell son, you have all the rights your creator endowed you with, you will never have anymore, and you are a damn fool if you let another, a group or a gov't deprive you of them!

You just don't have the right to force your ethics, morals, beliefs, "lifestyle" (perversions) or even YOURSELF on others.

From: John Smith on Jul 24, 12:07 pm

>... search the net out there...

John, don't get carried away.

"Searching the net" can get you "evidence" of alien abductions,
aliens stored at "Area 51," alternative medicine of all forms
that will "cure" all your ills, quackery and buffoonery that
doesn't stop. Try a Swiss by name of Erich von Daniken who
managed to get at least five printed books published showing
"positive proof" of the existance of "ancient astronauts."

>... there are 50KW monster mobiles in big rigs running multiple industrial >alternators...

John, this was already "discussed" in here along about five
years ago...but it was in ordinary cars and pickups, not "big
rigs." We went through the Watts and Joules and Horsepowers
ad nauseum to prove it infeasible.

"Industrial alternators" like the Leece-Neville units are only
capable of so much. At above 5 KW we are talking serious
SEPARATE electrical generators. Even if this mythical 50 KW
transmitter exists, its efficiency will be no more than 70%
running Class C, no more than 55% (at best) running AB_2.
So, the waste heat of a Class C 50 KW transmitter is 22 KW
all by itself. That's like 22 portable room heaters all
blazing away in one tiny place. A "reefer" truck can probably
handle it, but WHY?

["reefer" truck is a refrigerated trailer, not a transport for
marijuana]

50 KW is 40 db over a conventional truck-stop 5 W transceiver.
Anyone on the highways with THAT much power would suddenly
find themselves rather turned off by dozens and dozens of
other truckers who got totally blocked by this super-power
transmitter. Geez, at 50 KW, a little crystal set can be
used for DFing! :-)

>... they are more show than go (even the FCC would take interest in those rigs >if they
about all the time!), and you see them at the monster RF get togethers >back east in
Tennessee and surrounding states...

Riiiiight. :-(

>I have walked though such a "meet" (they are kinda like "car shows") before with >a 4 ft.
fluorescent tube, amazing, the ether is filled with RF!!!

Oh, geez, John. An ordinary fluorescent tube will light up at less than a hundred watts incident RF...but one has to be CLOSE to the field in order to do that. At ADA we did "SWR" checks on open-wire feedlines using a fluorescent tube, two bamboo poles, and two low-rank pole holders trudging through the flickering dark (feedlines were 12 to 15 feet above ground). The electric power demand (at the old site) was about 350 KWe so I figure roughly 250 KW RF tossed out by 30 some transmitters at any one time. Those fluorescent tubes did NOT light up in the middle of the antenna field.

At the new ADA transmitter site, built on an old airfield about 1 x 2 miles, resident farmers were IN the antenna field. A few had fluorescent lights. None were turned on by about 400 KW RF radiated in that field. Pretty well made all the radios they had useless, though, from rectification blockage. Note: Not all the 40 KW Collins amplifiers had arrived by the time I made that estimate. The existing 600 KWe generators were increased by another 200 KWe shortly before 1956. The adjacent but separate microwave radio relay building had fluorescent lights as did the office area in the main building. Those lights did NOT come on from all that RF of 400 KW plus...

Do I challenge your assertion of this RF field strength? YES. Based on my experience I don't believe it.

>an expert radioman.

No, "commander" buzziebaby, I didn't do that...I WORKED IN
that station and learned how from on-the-job instruction,
manuals, texts, and a bunch of experts on HF transmitters.
From the beginning of February 1953 to late January 1956.
I didn't have a lot of choice in that even if I was a
voluntary enlistee (ASN RA16408336). If you don't believe
me, just check with Gene Rosenbaum, N2JTV. Gene was in the
the same outfit, worked at the same station, but on another
of the four operating teams at ADA. I worked up to be an
operating team leader until the microwave radio relay
equipment arrived...and I became lead NCO at the ADA
microwave installation. BTASE.

If you are pissed or something, I'd suggest seeking medical
help for your rampant resentment. Personally, I don't give
a snit how jealous you are. I took advantage of my
assignment and learned all I could. That was enough for me
to change my career goal in life from industrial art to
electronics engineering after my Honorable Discharge. You
don't like that? TS. Pass me your TS card, I punch it.

> Kinda like how he blusters on about ham radio "Morse
>Men".

That's Mighty Macho Morsemen, eedjut. Get it RIGHT.

Anony-mousie buzziebaby, I've seen, operated HF stuff along with VHF, UHF, and microwave stuff IN the military and know damn well that the vast majority of military communications of half a century ago was NOT by any magic of morsemanship. Worse yet for you jealous types, I do have written confirmation of what I did AND the word of both military and civilian personnel who were THERE at the same time I was. No brags, just fact.

Now go play with your olde-tyme raddios, buzziebaby. Pretend you're a hotshot 1930s morseman and dream your impossible dreams of radio importance. Cuss out all of those who were doing the REAL stuff if that makes your ego feel better. It won't matter in the long run. I was there, you weren't. Hell, you can't even summon enough courage to use a real name or ham callsign!

>And where in that do you get they are somehow upset about losing 11
>meters?

From just about every olde-tymer in the West San Fernando
Valley electronics industry of 1958 through 1960, those
working everywhere from Ramo-Wooldridge Corporation in
Canoga Park, CA, to Gilfillan in Van Nuys, CA. Several
hundred of them. Lockheed ARC was in east San Fernando
Valley and I didn't get to east Valley much then.

Tsk. I didn't keep count. I should have known that good
old anony-mousie buzziebaby would be upset 47 years later
and demand respect to his imagination on what was. :-)

> It is a FACT that the cbers turned 11 meters into the sewer pit
>of radio.

Awww...poor baby. Upset are you? Now WHAT have YOU DONE
to "clean up" that "sewer pit?" Bitched and moaned to yer
anony-mousie ham buddies?

In 47 years a LOT can happen. 47 years is enough time to
graduate from school, get married, have kids, have a career
in something, have grandkids, and retire. Class A and B
CB were created BEFORE 1958 but were eventually deallocated
entirely. Class C CB became the Radio Control Radio Service
and got added channels around 72 MHz, has much activity
among model enthusiasts (more members of AMA than ARRL!).
Class D CB became just Citizens Band Radio Service and
dropped the need for licensing. CB never had ANY test of
any kind to get a license or "federal athorization" to
transmit...nothing but a Restricted 3rd Class Radiotelephone
FORM to send in when that was required.

>And again, how do you see in that anyone complaining about losing 11
>meters? No, most hams don't want the ham bands to become what the cbers
>have made of 11 meters. No complaing about losing it, just don't want
>the ham bands to become like it.

Oh? Did you poll "most hams?" Of course you did, you will say
so! [that makes it "fact?"]

You haven't been paying attention to CB. The big increase in
CB use didn't come until about in the mid-1960s and the
availability of economical, imported CB transceivers. The
trucking industry had already picked up on it.

So, there's about a seven-year period where there was NO
"sewer pit" of 11 meters. Seven years is a long time, too.
In seven years a couple can conceive a child, raise them
to enter the first grade.

Did all you olde-tyme hammes DO anything to keep this
"sewer" from overflowing? No? Tsk, not very civic radio
minded, I'd say.

>The hams hardly used 11 meters. In 1958 I was listening to hams almost
>on a daily basis.

Yeah, suuuure you were. As a SWL, I presume? :-)

> Sure there were a few at the time who may have
>complained a bit, but you attempt to make it sound as if half the ham
>community is still upset.

Awwww...buzziebaby, meet Broose (the extra on a bet).

Tsk. I'm still trying to find this mythical "ham community"
so that I can send in my "dedication and committment" papers
and sworn statements.

Riiiight and all the ham periodicals didn't say dink about
this growing menace of CB, did they? :-)

>Here, you are the ever present POS lennieboy.

I exist. My present mail address is the same one that was
on all my Ham Radio magazine bylines. None of those
were any "POS" sweetums...they were reviewed by other hams
on the staff before publishing.

What are YOU? Another anony-mousie with a ridiculous
handle, some ancient B&W TV "hero" character. Wow, the
number of bona fides you got is ZERO. ZIP. NADA. NYET.

I'll bet you are just an SWL or a CBPlusser who don't
know da code! Bye... :-)

Okay, His Royal Highness, why haven't you REPORTED THIS to
the federal government?!?

> My point is the
>illegal market has a glut of very high power amps.

My point is that the Internet has a lot of bullshit on it,
everything from these mythical "25 KW 'leenyars'" to aliens
from outer space stored in "Area 51." Doesn't make it true.

If you ARE such a "good citizen," why haven't you DONE
anything about it? Present your evidence to the feds.
If you have any, besides a lot of wind and imagination.

It is the civic DUTY of all good citizens to report
infractions of the LAW. Are you a good citizen or just
another anony-mousie in a newsgroup shoveling BS?

> Buddy up
>with some local cb-freeband ops, you can learn a lot they don't
>teach in the schoolhouse.

Royal Highness, I learned a LOT a LONG TIME ago and NOT in any
"schoolhouse" full of conspiracy theorists all trying to out-BS
the BSers. A very long time ago I learned to fire up HF
transmitters with outputs of 15 to 40 KW. Legally. Don't try
to foist off some anony-mousie "inside knowledge" on anyone
who has been IN the industry for a long time.

Go somewhere else where you think you can pull off a con on some unsuspecting yokel, okay?

One reason for that (ama vs arrl) is that the AMA provides it members
something they realy should should have insurance for their aircraft
hiting and damaging something some one

One source tells of a typical day at the FCC, they call it survival,
and it consists of protecting your back by gathering enough
documentation on your boss, peers, and subordinates, that should
the need arise, you can use it to protect yourself. Sounds like a
place with soaring morale and little inclination to perform technical
duties.

He probably was talking about the supposed "spin-offs"
from the space program to regular consumer products.
Many such were actually spin doctoring. But the space
program was/is still worth doing, and some products were
developed quicker because of it. ICs and such.

So what that boils down to is this, Joe: You don't want to
spend the time or effort needed to learn enough Morse Code
to pass the test.

What about the written tests for General and Extra? In order
to use digital modes on HF, you need at least a General
Class license.
>
> Fellow hams need to sit back and take an objective look
> at this hobby because it is dying a rapid death!

How do you figure?

When I became a ham in 1967, there were about 260,000 US hams.
Now there are over 650,000. The peak was about two years ago,
but there have been ups and downs before.

> Amateur Radio needs me and people just like me to join in on
> the HF bands and to use our real world high tech expertise to
> help further Amateur Radio.

OK, fine, how *exactly* will that happen?

Will you design and build new high tech radios?
Develop new high-performance modes of communication?
Set up some sort of new radio network?
Get more people interested in amateur radio by
demos, articles, etc.?

Where will the time come from to do that stuff?

For that matter, where will the time come from for
you to set up an HF station and operate it?

>Amateur Radio also needs my $$$$. Take a look at
>the declining number of amateur radio manufacturers
>and radios.

Did that in another part of this thread. The trend is
opposite to what you're saying.

>How could any business justify spending a
>lot on research and development in a market
>that is collapsing?

Well, the manufacturers don't think it's collapsing!
>
> Finally, I honor all those of you who are code proficient.

Thank you!

> I too may one day still be code proficient even if there is no > formal testing.

Why not now?

20-45 minutes a day for 4-6 weeks should get you to 5 wpm. There
are freeware Morse Code trainers that will run on most PCs. I
recommend the G4FON one.

> However, I do think that the right decision has been made
> by the FCC and will ultimately be finalized with little
> changes.

I don't think it's the right thing, but I'm afraid FCC will
do it anyway.

> This will not kill our hobby, but will inject more life into
> it.

I hope you're right.

I Think Len agrees. I certainly but it just goes to show that NASA like anything else in the Govt. Always spin yourself up as much as possible.

which of course is a part of the basis on which various folks claim that ARES and MARS press is also over blown, there is something there but it spun up and out of reality

Source record: 113502

How does every one feel about downloading all the question pools, aligning them with correct answers and posting them here?

This way, we need only redirect rec.radio.cb etc people here, and we can get some new licensees very quickly...

I also have a webpage where we can set the Q's and A's up at and make 'em available for download...

Anyone with more ideas on where we can begin advertising?

I mean, the more cb'ers and freebanders we can get informed, the more new licenses we can generate...

I can hardly wait, I am getting ahold of "Toothless Ted" on Chicken-Band channel 19 and letting him know right now--I just know he will be excited!

John

Not "probably," DEFINITELY. :-)

>Many such were actually spin doctoring. But the space
>program was/is still worth doing, and some products were
>developed quicker because of it. ICs and such.

I think the whole of the space program is DEFINITELY
worth doing. Thought so before I was a part of it
and still think so.

But, another of those "spins" is that "ICs got developed
through NASA help." Yes, NASA did - eventually - use ICs
but most designs of the Mercury-Gemini-Apollo program
era were discretes, diodes and transistors that were
screened, life-tested, lot-tested, measured three ways
from Sunday, and recorded in many pages of logs along
the "TX" (Tested eXtra) route to being man-rated.

Those of us who had been in clean rooms and had to attend
"MRBs" (Material Review Board) of minimum three persons
to change a single part were well aware of all those
things being discrete solid-state devices. Instrumentation
electronics had unmerciful QC procedures...man-rated was
another plateau above that.

I got to hold in my hand a TI flat-pack (old style) in
1958. A J-K flip-flop. Marveled at how small, tiny,
etc., it was. [I'd just built a "fast" (1 MHz clock)
discrete flip-flop with much difficulty] NASA was
barely out of the Geophysical Year launch failures of 1956.

The IBM guidance computer for Apollo wasn't even designed
yet in '58 but it would eventually be made...using nearly
all discrete semis and core memory..."magnetic rope" (of

cores) for a "ROM." State of the art when design was begun...not even comparable to what consumers got a decade or two ago.

The COMMERCIAL-INDUSTRIAL part of electronics spurred on the development of better, newer ICs. Government, primarily military, was second, just not near as desirous of small solid-state ICs as the commercial-industrial side of electronics. Semiconductor makers enjoyed a boom on top of boom in the commercial and industrial electronics area. Even now, the "space rated" ICs are terribly few in number. Check the NASA preferred parts listings against the giant listings of any semi distributor. No comparison.

NASA's big mainframe computers and fancy consoles at MSFC and the Cape? All supplied by the commercial-industrial makers as essentially stock parts.

...and that's the way it is...(borrowing from Walter C.)

Most of them were 24 volt units, but some 12 volt ones were made.
I've seen 'em.

The only mods I
> made to my 80M version to change it from a military version to a

I did all sorts of mods to the transmitters but they weren't really
that good unless you got lucky. The receivers were and
are much better.

They're also good as parts sources and VFOs. The Southgate Type 6
design has a lot of ARC-5 parts in it. You should see the
VFO - took a transmitter, cut off the chassis from just behind the 1625
sockets forward, drilled out the rivets and made a squashed chassis for
the VFO. A lot less work than making one
from scratch. Which I did for the Type 7

> . . . Darwin treated those of us out here in the trenches
> well . . he
> did not treat Detroit, Collins or Drake well . .

Collins was still selling the S-line in 1975 (saw it in the same QST as
the TS-520).

What finally happened to Collins was that it was bought out by
Rockwell. Part of the deal was that they'd still make ham gear.
So Rockwell/Collins developed the KWM-380, an advanced rig with
an incredible price tag. Not many were sold, of course. There
was a general-coverage version called the HF-380, too.

It should be remembered that Collins' main products were avionics,
BC transmitters and such. Ham gear was a sideline - some sources
say the ham division was not intended to show a profit.

Drake, OTOH, is still around in a way, making general coverage
receivers. But not a line of ham gear.

Which would have got you a Heath HW-16. As a kit, without any
accessories.

> Which is about what one of
> the early clunker CB SSB xcvrs cost in those days.

Never followed that stuff closely. As I recall the AM ones cost about
that much back then. They were primitive single-conversion 455 kc IF
jobs with basic MOPA transmitters.
>
> If I paid $500 for it in 1965 it would be $2,900+ today, I
> coulda bought an S-Line for $2,900.

Well, IIRC, the cost of a 75S-3, 32S-3, power supply and filters would
run you more than $1500 back then. Which works out to almost
$9000 today.
>
> Ahhh . . the "good old days" . . but enough of wallowing

The best part is that if someone wants to use old gear, it's out there.
Some bargains, some not, but we have more choice now than ever before.

>So what that boils down to is this, Joe: You don't want to
>spend the time or effort needed to learn enough Morse Code
>to pass the test.

Amazing intellect you display, Jimmie!

However, before you slide into more snide remarks, try
to understand that NOT everybody lives a life of
radiotelegraphy. True!

>What about the written tests for General and Extra? In order
>to use digital modes on HF, you need at least a General
>Class license.

Tsk, tsk. Misdirecting into the writtens again, are you?

Let's get back to the MORSE CODE TEST NPRM, WT Docket
05-235. NOTHING in that NPRM proposes to change
anydamnthing in the WRITTEN test elements.

>> Fellow hams need to sit back and take an objective look
>> at this hobby because it is dying a rapid death!
>
>How do you figure?

Is morse code ANYTHING in radio in this new millennium
besides being a niche interest area for a bunch of
olde-tyme hammes stuck on telegraphy?

>When I became a ham in 1967, there were about 260,000 US hams.
>Now there are over 650,000. The peak was about two years ago,
>but there have been ups and downs before.

Tsk. There has been a slow but STEADY decline in
licenses for two years.

>> Amateur Radio needs me and people just like me to join in on
>> the HF bands and to use our real world high tech expertise to
>> help further Amateur Radio.
>
>OK, fine, how *exactly* will that happen?
>
>Will you design and build new high tech radios?
>Develop new high-performance modes of communication?
>Set up some sort of new radio network?
>Get more people interested in amateur radio by
>demos, articles, etc.?

Let's put it this way: It AIN'T gonna be by "designing
and building state-of-the-art VACUUM TUBE transmitters
in the 1990s!" :-)

>Where will the time come from to do that stuff?

What...are you now a time-study man for the "amateur
community" management?!?

>For that matter, where will the time come from for
>you to set up an HF station and operate it?

Isn't it about time YOU came up with some solid-state
designs yourself?!?

The solid-state era in all electronics happened 40
years ago.

>> Finally, I honor all those of you who are code proficient.
>
>Thank you!

Jimmie, you are an absolute CREDIT to amateur radio...of
the 1940s.

>> I too may one day still be code proficient even if there is no
>> formal testing.
>
>Why not now?

Why EVER?

>20-45 minutes a day for 4-6 weeks should get you to 5 wpm. There
>are freeware Morse Code trainers that will run on most PCs. I
>recommend the G4FON one.

Gosh, Jimmie, a half hour to an hour a day studying solid-
state circuitry could get you into shape to "design and
build your very own TRUE state-of-the-art transmitter!"

Why, heck and darn, all your neighbors could come over and
admire it, go oooh and aaahh and you explain every solid-
state bit of it!

>> However, I do think that the right decision has been made
>> by the FCC and will ultimately be finalized with little
>> changes.
>
>I don't think it's the right thing, but I'm afraid FCC will
>do it anyway.

Have courage. Do not be afraid!

The sun will come up...tomorrow...<down music>

>> This will not kill our hobby, but will inject more life into
>> it.
>
>I hope you're right.

He >>IS<< right, sweetums. All this radiotelegraphy was
beginning to stagnate in-place. Gangrene is sure to follow.

New, BETTER blood needed, stuff that doesn't want to revert
to 1940s and 1930s in standards and practices!

But...YOUR amateur radio world looks dark and dreary indeed.
No more will you be able to show off your "federally
authorized" morsemanship rank/title/privileges!

What will your neighbors say then?

Of course he can! Just ask him! In fact, he claims he made $250 a
piece on a bet that he made with a couple of "CB plussers" who said
that he couldn't pass an Extra Class exam without studying. Mind you,
this was AFTER the code requirements were reduced. There is, however,
no way to verify his story, but I do know that many of the hams who
knew Babbling Brucie when he lived in Ohio have said that he is a
bald-faced liar, so you decide...

I'm sure that the world of amateur radio looks bleak indeed to a sourball standing on the outside, looking in. Morse Code testing or no, Mr. Anderson will still be on the outside looking in. There isn't a snowball's chance in hell that Leonard will obtain his "Extra right out of the box" before he completes his mission of taking up space and using up oxygen.

Where was this written? What NASA source released it?

At one time or another I've read about these various products and
some affiliation with NASA, but never as a product OF NASA research or
manufacture.

> ALL of those common myths are further reinforced by the

That is the fault of the media that "runs" with it.

Not NASA.

> Everyone sees it in
> print (real ink on real paper) or sees it on TV (TV never
> lies in its news)...and they accept it as "fact."

Geeze...I've never ONCE seen any of those stories as you relate
them.

Maybe they are so fresh to you since you're the one generating
them?

Huge Snip of 21 lines of tap-dancing to avoid the fact that you
were once again proven wrong.

But there ARE Astronauts who are licensed Amateur Radio operators
who WERE licensed Amateur Radio operators BEFORE they were designated
"Astronauts".

The only one ignorant of AMATEUR Radio here, Lennie, is you.

You made yet another attempt to make an end-run around facts and
got tripped up by the truth.

Well, we know that he once had a cb set. And was once co-owner of
some sort of land-mobile VHF system.

And about a quarter-century ago he plunked down the coin for
an R-70 - a manufactured general-covverage receiver.

All the rest I've read has been about his use of stations owned
and set up by others.

Been there. Done that.

Remember the year the one CW station made more points than
the three 'phone stations put together? Oh wait - that was
every year we operated...

Maybe he will get a license once the code test goes away.
Doubtful, since he's never held any class of amateur
radio license, despite code test waivers, accomodations,
the creation of a license class with no code testing at
all, etc.
>

Getting a license is one thing. Actually setting up an effective
station is something quite different. For all of his talk and
bluster, he doesn't have a single ham radio project to show us.
Sure, he did some articles for a defunct magazine - a quarter century
ago. All basic theiry, covered elsewhere long before.

Nor will he set up a station unless somebody else is paying the
way and it's all manufactured appliances.

Antennas? Don't hold yer breath.

All talk - no action. That's ol' Len.

I consider it an important radio service that could be utilized in the service to nation. But I doubt that every single citizen or government agency can be guaranteed emergency communications via amateur radio, no matter what the MMM would have you think.

But so far YOU can't pass a test with only 35 questions in it...So
why the subterfuge about 1000...?!?!

> U.S. amateur radio is a HOBBY...(SNIP)

Says who?

The FCC doesn't.

No where in Part 97 does the word "hobby" appear.

Are there people who participate in Amateur Radio as a
"HOBBY"...?!?! Certainly..just as there are people who participate in
Emergency Medical Services, Search And Rescue, Meals-on-Wheels, etc for
whatever personal gratification they can glean from it.

That people do "have fun" does NOT negate the value of the Amateur
Radio SERVICE as the disaster relief, emergency communications and
health and welfare medium that it ALSO is.

> (UNSNIP)...not an occupation...(SNIP)

It is to many. It provides jobs.

> (UNSNIP)...not some vital service to the nation.

It is that too.

That YOU don't think it is is irrelevent.

> I just wish that more would
> treat it as such instead of wandering off in the haze of

> > Ahhhhhhhhhhhhh! FEUDING! So now you spell it right.
>
> and you were too stupid to figure it out before

No...

I was forcing you to slow down and spell a simple word correctly.

It worked.

It took me forever to get you to stop spelling "liar" as "leir" or
"lier"...Now you DO spell it "lair"...Still not right but at least
you're getting the letters right.

Progress, boyo...slow but sure.

More linguists have forgotten you than you will ever know.

Why do you insist on lying about being so well versed in
linguistics when it's so patently obvious that you are incompetent in
even basic English skills...?!?!

> > YOU think it's got to due with male anatomy, but that's only
> > because you're gay and it's a lifestyle issue for you.
>
> not gay ole boy

Sure you are.

You said you have sex with men. You're gay. Period.

> > > and do make up your mind wether i am a coward or brave
> >
> > Oh, you're NOT brave...Stupid...Confused...Functioanlly

"anothe rlie"...?!?!

> Cobfused by you stpuidity is only true thing in there

"Cobfused"...?!?! I can only imagine what you were thinking when
you screwed that up.

"stpuidity"...?!?!

I just love it when you try to accuse someone of "stpiudity" yet
can't SPELL "stupidity"...

Idiot.

More likely he's got them tied up in the basement and uses their house and savings for whatever ungodly purposes he can dream up...

Maybe to finance that Liquid Oxygen-cooled storage capacitor idea of his...

I wonder if mumsie and popsie knows he got booted from the only local ISP in Taylorville for acting like an idiot on the Internet?

I wonder if they know he had their pictures on his webpage which was linked to other webpages of his that were rife with profanities, insults and assinine behaviour...?!?!

I wonder if he's still flying that illegal ultralight? He'll probably "park" it in some neighbor's tree someday, becoming the laughing stock of South Central Illinois and getting his name brought to the attention of the local FSDO.

My MOTHER had her own CB mobile rig and was also part owner of VHF/FM
biz band xcvrs and she knew how to wire 'em and operate 'em.

When she she was seventy-something.

Then you Noel and I decided we were tired of doing all the work again
and didn't go back the following year. The year 50 of their ops ran up
a grand total of around 150 contacts for the entire 24 hour event.

> >> Tsk. Don't try that ploy. THE FCC DEFINES AMATEUR RADIO
> >> IN THE UNITED STATES. Period.

You folks all missed an important point.

We are told in no uncertain terms that

"THE FCC DEFINES AMATEUR RADIO IN THE UNITED STATES. Period."

But the same nonamateur also tells us that amateur radio

"is a HOBBY".

Yet the word "HOBBY" or "hobby" does not appear anywhere in Part 97.
The FCC
doesn't use that word at all in connection with the definition of
the Amateur Radio Service.

So the FCC, who define amateur radio in the United States, don't use
the
word "hobby" in their definition. Yet we are told that amateur radio
is a
hobby.

Do you see the contradiction?

Looks like someone doesn't know what he's talking about.....

Since the "message" wasn't for your benefit, no effort on your
part is required.

Hard for you to believe, I am sure, but not every post I make here
is for your benefit.

Some people call THAT "obsessed"...

> *is* a
> hobby.

becuase by and large it is

regardless of its value or lack of it to the nation to the FCC it and
us are merely to be regulated and as easily as possible

If calling the ARS a service aids the FCC they will do so

If calling us a Pizza did so I bet that would be in the rules too

>
> Do you see the contradiction?

nope

I suspect you see one because you are operating under the assumetion
that to paraphase the Indians, "that the Great White Fathers agents
speak with forked tongue" is not SOP inside the beltway

"tennor"...?!?!

Wrong word, Markie.

And "close" doesn't get it.

> same sort of mindless attack and libelous statments

What attack? What libel?

> > Which is just about any average IQ'd 5th grader...but NOT Mark
> > Morgan.
>
> You are claiming to only have reached the 5th grade?

Nope...far greater. You're the one with the IQ deficit, Markie.

And don't try that "I have an IQ of 248" routine again...It's
obvious on so many levels that that is not true.

Is that what that was? I thought it was your face.

I'll apologize to Trigger later.

> > So...Provide me some example of NASA "PR" that is a myth.
>
> Lenn already has provided several, he does know the feild better than I

No, he doesn't.

His list of ALLEGED NASA myths is nothing of the sort.

Any of the stories he related can be traced to any number of MEDIA sources that misrepresented the FACTS.

Lennie just like's to think he's a Mythbuster.

Fact of the matter is he's just an antiquated gaspasser.

Now that the code test will soon be history, it should
be easy for Len to get a license, if he in fact does
have all that RF experience and knowledge above. Still,
I'd check out the question pools for new technologies and
the rules and regs. I won't ask for Len to get an extra
out of the box. Just get any ham license and upgrade
later if he wants to.

Where do you come up with this stuff, Markie?

Ten days ago you were insisting that I was "on the public dole" for disability, and now you come up with this "you are poor" silliness?

I asked you several times where you came up with that "public dole" thing and you never answered...THAT was "libel".

I do.

So does Webster's.

> It does go on to show your obsession with gentials

What genitals?

Breasts, Mud-for-brains, are not "genitals"

> prehaps the porblem is that you realy need to get laid

I don't ahve a "porblem", Markie...Whatever THAT is...

Steve, K4YZ

K4YZ:

I prefer my breasts with genitalia... (well, chicken breasts with a salad, really)

Other than the girly-men, I am sure most guys would agree, you should probably mention that--for the clueless...

John

> the cut
>
> you keep claim you are licenced
>
> you are not

Sure I am.

Refer to the Tennessee State Board of Nursing

> I am not licenced never claimed to be

But you professed intent to claim a professional title to which
you are not entitled.

That makes you a thief.

> > I just call you for what you are...A deviant.
>
> you are just lying stevie

Nope.

You're a devaint. Said it yourself.

> > > > > > Went and lied again in public. You're racking them up, Boyo!
> > > > >
> > > > > > nope you are sick
> > > > >

> > >
> > Nope and nope again, Wimpo.
>
> I have prefromed a pataint assement

"prefromed"? "pataint"? "assement"?

You can't even get the phraseology right, Wimpo.

> i have read you ####

Now you pretend to be a proctologist or pathologist?

> I read mucyh of the #### you have posted while I
> was here
> and found you obsessed with me at times I hadn't posted in years
>

> > > > >
> > > > > Another lie Stevie
> > >
> > Nope.
>
> you have no license to make the statements you have
>
> you are ham shrink same as me

Nope.

I am more than qualified to make a patient assessment. From what
I've seen of you, all I can say is don't set foot in Tennessee and let
me know about it boyo. I've got a place all picked out for you.

> > > You are an LPN with delusion of granduer
> >
> > Half right.
>
> you mean you have been lying about being an LPN

Nope. Your assertions of "granduer".

> > I'm an LPN. With over 20 years of experience and EMS credentials.
>
> then I am fully correct

Nope.

> like a lot of Nursie they get too bigg for their pants, and start
> claiming powers beyond their ken

But the state of Tennessee allows me to make patient assessments.

You'd come in, but you wouldn't go out, Markie.

> as you have done in claiming you could disanose that someone did not
> have a hearing problem meeting them at a VE session

I've never claimed I could "disanose" anyone...whatever THAT is...

> indeed you claimed you knew the MD was wrong

And I was right.

A guy tried to claim "tone deafness" as a Morse Waiver. He was a
an ACTIVE professional musician.

It didn't take 6 years of med school to figure that one out.

> > > > More Markie hiding behind profanities that are supposed to make

I know English. I also know it's capitalized.

> > > such you as are a God ####ed lair.
> >
> > That's blasphemy, Mark. And vulgar.
>
> not at all vulgar

Sure it is.

Walk up to a priest and say that...Or a schoolteacher...

> > > > You clearly stated that you would claim a title to which you were
> > > > NOT entitled to claim.
> > >
> > > that I would do so not that I have
> >
> > We can just add it to your list of other things that you ahve
> > ALREADY claimed to be but aren't, COLONEL....
>
> not yet not till you get help

You keep insisting I "need help" but you've not yet shown for what.

You insist I am "lying" (when you manage to spell it correctly),
yet haven't substantiated a single mistruth of my promulgation.

> > > If it will get you to seek I will claim to be the president, but tille
> > > you agree to seek that help I haven't made the claim
> >
> > Help for what?
>
> you delusion and your obsessive stalking and threatening behavoir
>
> are you so stupid I have to keep repeating that everytime?

Because you have yet to prove any of it.

YOU keep coming here of your own volition and then accusing me of
"stalking" you because I respond to the comments YOU made in PUBLIC.

And the thread tree shows you matching me pretty much one-for-one,
ergo YOUR suggestion that >>I<< am "obsessed" is ludicrous...

Lastly, your suggestions of "threats" are absolutely hillarious.

> > > go study the concept "if... then"
> >
> > Go study the concept "English Writing and Composition".
>

Nope.

You're here on your own volition. No one, least of all me,
dragged you here nor MADE you participate.

> > Nor am I bullying anyone.
>
> bull#####

Nope.

> > I may bite the bullet on "annoying", however you started it, so
> > turn about is fair play.
>
> you started it
>
> with your threats and blackmail years ago

Nope. You're lying again.

No one ever "blackmailed" you.

You should have kept your deviant lifestyle and mistruths to
yourself.

The only one in this forum responsible for making your lifestyle
"public" is you.

> > > the other your unhealthy interest in other people genitals

> your point then was conceeded weeks agoo then

No...

YOU made my point FOR me...

The O P E R A T O R is responsible for making sure the radio is
on the proper frequency and operating within established parameters.

YOU insisted the RADIO did it all, however YOU concede that if
there's a failure, the OPERATOR will get the violation notice, which is
exactly what I was saying...

> > > If they notice

2246. Does ham radio license include GMRS?

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-25 19:31:42 UTC
From: DesignGuy <dontbother@nowhere.com>
Message-ID: <y6bFe.207156$xm3.87178@attbi_s21>
Source record: 113605

I'm getting read to take the exam for a ham ticket next month. I was curious to know if having a ham radio license precludes one from the GMRS license requirement, so paying the $75 for the GMRS license is no longer necessary for ham license holders?

Also, how long does it take to get the actual paper license from the FCC with your callsign?

Thanks in advance.

2247. Re: We need no Licenses anymore.

How does he prove that? A passing grade would be
good enough in my book...
> 4. In under 7 minutes,
> 5. And collect $250 from two CB-Plussers!
>
> Or so he's said.
>

Of course, but assuming it was true, it's still a pass
and an upgrade. People have been known to pass the
extra exam after finishing the general, as they took
it as a freebie at the same VE session at no extra cost,
on a lark.

When I took elements 4A and 4B (Jan 2000) I got two wrong
on 4A and one wrong on 4B. The CSCEs, coupled with my 1976
era tech plus, got me an extra upgrade on Restructuring Day
April 2000.

>And they can completely violate the Morse Code timing of elements. No
>wonder the FCC doesn't have a definition of Morse Code within the U.S.
>Statutes.

Well, not a complete one for WORD RATE in the law. The referenced CCITT-to-ITU document on Telegraphy doesn't define RATE. Worse yet, that CCITT-to-ITU document reference is intended for COMMERCIAL telegraphy! :-)

>> Those who piss and moan about "today's multiple-choice" need

>> maybe a driver's license thing, depending on their state).
>
>Some states have mandatory retesting for the elderly.

California does not. :-) California drivers licenses do not require retesting for five years if there are no infractions of the Motor Vehicle Code on record for them. [more often depending on number of infractions]

However, the FCC has totally stricken AGE from all amateur radio regulations. "Six year old extras" are a legal possibility!

>> Could anyone "memorize" a thousand questions...along with

>> authorization" license and imagined self-importance.
>
>I consider it an important radio service that could be utilized in the
>service to nation.

True enough! However, there are two takes on the "official
phrases" in FCC regulations on that:

1. It is kind of a "standard boilerplate" political nice-nice
phrase to justify a radio service existance. ["appreciation"
letters sent by officials to hams, ham groups are in the
same category, but to say so out loud is to invoke total
warfare by the ham faithfull!]

2. There is SOME truth to it, however small the actual incidents
of "service to the nation [community]" are.

The ARRL long ago picked up on (2), disregarded (1), and pitched
it constantly to anyone reading. Nice-nice words that most hams
took to emotionally. They WANTED to hear such things in order to
justify their hobby to others...and perhaps to themselves. It
made them feel IMPORTANT!

> But I doubt that every single citizen or government
>agency can be guaranteed emergency communications via amateur radio, no
>matter what the MMM would have you think.

True enough also! However, the Mighty Macho Morsemen still dream
about "saving lives" a la the Titanic disaster, all done with that
morse code stuff. It is part of the fabric of their existance.
Fabric tailored for them by the PR troops in Newington. In any
other venue such would be called "brainwashing." But not here,
no sir, it is what they live for...

No "stockade." Not even Stockton, CA.

Stocks and Bonds you don't get to know about... :-)

>> I have a ham license. Do you?
>
>Now that the code test will soon be history, it should
>be easy for Len to get a license, if he in fact does
>have all that RF experience and knowledge above.

I've had a First Class Radiotelephone (Commercial) license
since March, 1956. Kept it renewed. FCC turned it into
a General Radiotelephone license, lifetime.

BTW, any First 'Phone or GROL has places on the back of
the certificate for sign-offs by the responsible engineer
at a transmitter. I have such sign-offs on three of the
certificates, dating from 1956 to 1985.

I can supply a resume (short-form) if necessary...:-)
Have already done that in here. But, that generates
even more anguish/hatred/jealousy by those with little
or no commercial experience...especially those with no
military communications experience. :-)

> Still,
>I'd check out the question pools for new technologies and
>the rules and regs.

...at least every two years when a pool is reviewed by
the VEC QPC.

> I won't ask for Len to get an extra out of the box.

No? Tsk. I thought all PCTA extras were my "sworn
enemies" in here. :-)

>Just get any ham license and upgrade later if he wants to.

How about one from the Food and Drug Administration?
They are responsible for ham. And beef. And fish.
And etc. :-)

"Ham is the butchered meat of swine..." :-)

[oh, the skins are THIN in here...thinner than a microtome slice!]

> for ham license holders?

No Sir...You are still requied to apply for the GMRS license if
you intend to operate on GMRS frequencies. Your Amateur license will
not be sufficient there.

> Also, how long does it take to get the actual paper license from the FCC
> with your callsign?

Can't answer that, but Amateur items are running around 2-4
weeks...The Good thing is that the FCC says you may operate as soon as
a callsign with your name on it appears in teh database.

BTW...Another poster suggests that "no one is bothering to apply
for GMRS licenses"...If you plan on doing nothing but using the simplex
channels on low power, you might get away with that...But operate on
someone's licensed repeater and you're likely to find that $75 was a
small price to pay for the legal trouble you could manifest.

Good luck.

That is true. The definition and regulatory package ensures that
folks who participate in the hobby do not interfere with other users
of the spectrum (or each other), or utilize it for purposes that it is
not intended to be used for (such as for business purposes).

It's true that we've been told

"THE FCC DEFINES AMATEUR RADIO IN THE UNITED STATES. Period."

But that statement (taken as a whole) may not be true.

> The definition and regulatory package ensures that
> folks who participate in the hobby do not interfere with other users

> Hmmm - you'd think they'd know what it is - wouldn't you?

Sure - which means that one of the statements must not be true.

Note that ARRL does not state:

"THE FCC DEFINES AMATEUR RADIO IN THE UNITED STATES. Period."

The contradiction comes from the idea that the FCC and *only*
the FCC defines amateur radio in the USA - which is what the
"Period" means.

> >snip
> >

> >believe"
>
> That's for sure!
>
Yep.

Which is to say that, for some, Amateur Radio is a hobby. For others,
it's much more. For the FCC, it's a licensed radio service that is
regulated by Part 97.

In fact, Amateur Radio is all of those things and much more.

| There are very few people who even bother anymore applying
| for a GMRS license.

I have no idea how true this is, so I'll assume it's true.

However, as a ham radio operator, you've given the FCC one more stick they can use on you -- they can take your ham license. That, and you should be more familiar with the regulations than other people, so they're less likely to `go easy' on you. So being a ham means you need to be extra careful about obeying the FCC regulations, even if they're not related to ham radio.

I'm surprised that the FCC charges so much for a GMRS license, but they do, so that's that.

You need to re-read my paragraph, Markie, then re-read YOUR reply...If you are even 1/100th the "man" you claim to be, try to be a bit objective and figure out why your reply doesn't even come anywhere close to sounding reasonably germane.

Then come back after I've finished laughing at you...Again...

it is quite germane you and other of MMM claim amzing powers for the
ARS. The ARS does provide usefull serivce esp in getting a lot stuff
off the plates of the Cops and/or military (depends on the incident)
but no way the saves the day

The ARS makes a real and mojor difference for those people it helps ,
but the disasters remain much the same with or without us

It's a way for those who didn't serve to be able to hang "thier" hats
on something and feel good.

I recall Larry Roll creating a scenario where only a MMM could respond
effectively. Every "Shack on a Belt" so-called emergency communicator
"wannabe" was useless in Larry's scenario.

2281. more lies

you should look at the power and freqs on your GMRS radio if they are
less than 2 watts you may be able to use the free MURS either on the
same fqs or retuning

No, completely separate service. But if everyone in your
group are hams, you could use 70cm transceivers on a
simplex channel. Similar band as GMRS as far as technical
details are concerned. One thing is that you can't
do business traffic on the ham radios. But you won't
be competing with GMRS users.

>
> The FCC says "be sure", and I do.

What, you said "I do" and MARRIED the digital display?!?!?

BWAAAAAAAAAAAAAAAAAHHHAAAAAAAAAAA!!!!!!!!!!!!!!!!!

TweeedleDUMB, the "display" doesn't do the measuring. Inside
your rig is a microcontroller doing a FREQUENCY COUNT. All
the display does is present its count state to something

humans can read. That internal FREQUENCY COUNTER is accurate
to its internal TIME BASE and that is calibrated against an
external standard (WWV for some rigs or another calibrated
frequency standard for other rigs). It's in the instructions
for your plug-and-play HF machine...just about ALL of those
HF machines work the same way.

There are OTHER ways to insure frequency calibration...but
you still don't know dink about how to do it other than the
trying-to-avoid-looking-stoopid "be sure" remark.

The ONLY spectrum analyzers that could possibly do the
calibration cost as much as the list price of a new auto.
Your "disability check" from ripping off the U.S. govt.
ain't gonna cover that. The same with a synthesizer-
controlled signal generator having a very low PPM rating
(Agilent makes some)...costing much much more than you
can afford.

FREQUENCY COUNTER, boy, FREQUENCY COUNTER. One with greater
accuracy in its time base than what is in your HF machine.

>> > It is additionally noted that Leonard H Anderson had nothing to do
>> >with the creation for the aforementioned PLL or DDS that he's
>> >attempting to brag on.
>>
>> Tsk, tsk. The fire in your hate-filled eyes is robbing you
>> of any comprehension of what was written.
>
> Nope. Just noting that you're trying to "diss" Amateurs again.

Awwwww...letting your EGO run riot in being the sovereign
representative of ALL U.S. amateur radio again?!?!?

I am "dissing" ONE person...dumbfork Stebie of the emotion
machine. You don't know dink about metrology, can't even
describe how you check calibration of your rig's internal
frequency counter!

> It's about assuming responsiblity for the proper operation of your
>radio station and not surrendering your obligations to technology.

What in the HELL are you mumbling about? [have you gone nuts?]

Radio >>IS<< technology, tweedleDUMB.

By LAW you MUST stay INSIDE the allocated band edges.

Hello? Did you think that "will and idea" or some idiot
non-specific emotional pep talk is going to keep your
frequencies INSIDE the ham bands?

"...not surrendering your obligations to technology."
Geeee-susss! Think about what a dumbfork thing you wrote!

You sound like you've mounted a lecturn but forgot to
light your mental lantern. The light ain't come on yet.

Staying WITHIN the band edges >>IS<< "proper operation."
The ONLY way you CAN stay within (and be LEGAL) is to
USE TECHNOLOGY!

<giving up trying to explain radio to dumbfork stebie>

Don't know about Toothless Ted, but some on the "freeband" may want to get ham licenses. The sunspots are at a low right now, and there's not much "skip" on 11. But there is on 80, 40 and 20, worldwide. Many different bands and higher legal power (on the order of a kilowatt, varies on bands). "Repent you radio sinner, come to the salvation of a ham license". :-)

It is an ambiguous statement though. It is true enough. But does it
mean that the FCC defines Amateur radio without input from amateurs or
anyone else?

No. The FCC defines it, and in taking opinion from Hams and others,
they will obviously disappoint some people.

I have no problem with the statement. The presentation of the statement
was intended to inflame though....period...

And it worked.

> Sure - which means that one of the statements must not be true.

So it's a hobby. So what? It *is* a service too. Lets face it - if a
person makes the argument that it is a hobby because the ARRL says so on
a web page, they must concede that it is also a service, unless they are
going to declare the *actual* name of the FCC calls the ARS to be less

accurate than what ARRL types on a web page. To do otherwise is to
invite looking foolish. Period

In short, perhaps the FCC declares the Amateur Radio Service to be a
service..... Period???

Or maybe they were just like saying?

No. Amateur radio and GMRS are seperate and unrelated. The
possession of a licence for one has no bearing on licensing for the
other.

> "Other radio services" include ALL the Public Safety radio
> services "such as" police, fire, medical mobiles, etc., etc.
> *ALL* of those Public Safety radio service folks are trained
> for emergency work since that is - essentially - their work.

The problem with the public safety radio services is twofold:

1. All too often there is no interoperability between systems, which is to say, the fire department can't talk to the cops, the cops can't talk to the EMS people, and none of them can talk to emergency management. Incidentally, this is an area where we hams have a distinct advantage because we can basically all talk to each other.

2. Most Police/Fire/EMS people aren't trained specifically in emergency communications or the use of radios beyond what their everyday job requires. Yes, they mostly have ICS training and they mostly have taken some sort of training in how to conduct their normal communications, but when their systems break down or a radio doesn't want to work right, that's where the problem begins. The majority of these dedicated individuals' knowledge about their radio equipment boils down to this: Either it works or it doesn't. If it does, fine, if it doesn't, get another radio, or another system. Of course, getting another system in the middle of a major incident might prove a bit problematic, especially when you have fires to put out, patients to treat, crowds to control, or whatever other duties these folks have to perform - and which is where the majority of their training is

invested, for obvious reasons.

>>This is largely because emergency management authorities at the
>>Federal, state, and local level have incorporated amateur radio into
>>their SOPs, SOGs, and IPs and thus training opportunities for the

Yet, San Diego county's primary auxiliary emergency communications group is the ARES/RACES group, which is incorporated under their Sheriff's Dept. In other words - hams. :-)

> little ham transceivers, yes? No...

Amateur radio did not become a viable alternative for personal communications until the advent of the no-code license, which happened much more recently than 1914. There are, indeed, couples with Technician Class licenses who use the 2m repeaters instead of cell phones to chat during drive time. Especially in states such as New York where it's illegal to drive while using a cell phone unless you have hands-free operation.

> duty)?

Not necessary, since before a jury is sent into deliberations, the
judge in the case will instruct the jury on the law that applies to
the case. Now, if only we could get terrorists to instruct people on
the dangers of responding to a nerve agent attack such as the one on
the Tokyo Subway in 1995...

> for civic duty)?

Obviously not. However, it *is* your responsibility to equip yourself
with a working knowledge of current issues and the various candidates'
positions relative to those issues, as well as their track record on
voting on previous issues, so as to be able to make an informed choice
when you vote - a form of self-study training, absent which you are
actually doing no service to your community at all, just going through
the motions.

This ignores the fact that a significant portion of the U.S.
population does not live in urban areas, and in many suburban and
rural areas, part or even all of the available emergency services are
provided by volunteers. Often those volunteers are every bit as
dedicated and well-trained as their professional counterparts. But
perhaps the defining factor is the likely attitude of their potential
customers...to wit, if you crash your car and the local EMS and fire
department have to come extricate you and provide you with emergency
medical care, what's more important to you - whether or not they
provide quality care, or whether they're getting paid or not?

> have been a bit more circumspect in what he said.

No, he meant what he said, that communications is the first thing that
breaks down. Unlike the Red Cross courses I took, when I took ICS-100
it wasn't with a ham group at all, it was with Erie County SMART, and
the class included doctors, nurses, administrators, and a few hams.
What he was referring to is communications on the scene of an
incident. Batteries get weak and die, radios get dropped and cease to
function or get left on a rig while its former wearer is putting on
his Scott pack, etc.

>
> By golly, all them acreditation certificates (probably suitable

> for framing) look so damn IMPRESSIVE!

What's impressive isn't the certificates, but the knowledge they represent. Of course, it's only impressive if one is actually interested in knowledge, rather than glossing over such soncerns as the liability issues that go along with deploying untrained personnel to attempt to mitigate an icident.

>>When I took Introduction to Disaster, under the auspices of the

Drills are training too. However, if you wanted to serve as a Red Cross volunteer, the Mass Care and Introduction To Disaster courses are mandatory.

>>I took ICS and ERT as part of Erie County SMART and completely

>>
>>Nobody at any of these courses has said anything about being a CB
>>operator, or MURS, or GMRS, etc.
>
> If those courses had only radio amateur attendance, it would
> be folly to mention other radio services... :-)

The only ones that were hams-only were the two Red Cross courses I took, Mass Care and Introduction To Disaster, which were held as a special session for the Erie County ARES/RACES, at our regular training facility (the county EOC/Training Center) rather than at the Red Cross chapter HQ where they are usually taught.

>>The number of radios does not equate to the number of properly trained

They might as well, for all the effectiveness it has exhibited in carrying out its mission.

> Shall the NTIS disestablish its precision time-frequency
> standards operations? [see things like "Allan Variance" for
> precision determination]

What, and deprive us of WWV and WWVH?

David W. Allan would be proud, but that's the NIST. This computer uses an application provided by NIST to poll daily for the correct time and sync the computer clock to the real clock in Boulder, CO. Because of outside inmfluences, this only manages to keep my computer within about seven seconds of the actual current correct time, but that's good enough for my purposes. I'm not currently using this machine for determining short term phase noise of millimeter Local Oscillators.

> Shall the insurance companies disincorporate because hams
> are immortal and therefore do not meet actuarial tables?

Since we seem to have degenerated into swapping rhetorical questions instead of sticking to the issue under discussion: Have the new actuarial tables resulted in lower insurance premiums, as they should?

Why? You hearing contestors operating as much as a full 1 MHz outside their regulated band limits? With hundreds of times their legal output power? Interfering with other licensed services?

> Okay, John, now YOU get back to ME when you've been IN a REAL
> EMERGENCY SITUATION. Earthquakes not necessary...substitute
> something that affects about 10 million or so locals.

Up here we don't do earthquakes. We do, however, do blizzards. My first experience in disaster communications was the Blizzard Of '77.

http://www.wbuf.noaa.gov/bzpns.htm
http://larc.hamgate.net/blizzard_of_1977.htm

There was another similar event in 1981.

There was an ice storm a few years ago that left us with no electricity for a few days, though nothing like the one a few years before that, which left Lawrence County without a single utility pole left standing anywhere in the entire county.

There was the power outage of August 2003.

There was September 11.

Some of these may not have affected 10 million people, but some of them did kill people nevertheless, and when lives are in the balance, that's an emergency by definition.

> Tell us how it feels to confront a "terrorist" face-to-face,
> armed with your trusty ham rig.

I'd prefer to be armed with my trusty SKS, actually...but my thing is communications, not law enforcement. nevertheless, I have been trained on how to recognize the presence of, and identify, criminal activity or terrorism in an emergency, how to self-protect against the risks associated with such an incident, understand the potential outcomes associated with a terrorist incident, and how to preserve a crime scene. Have you?

> Tell us how it feels to jury-rig a pole hoist to restore part
> of the electrical supply using your morse key. ["just rub two
> wires together, right?]

I don't own a Morse key. However, I have gone out with a group of hams in the aftermath of an ice storm to do damage assessment on the power grid at the request of the local emergency management office. In fact, I coordinated the operation. Didn't use a gin pole. Did use a generator. Didn't use CW. Did use 2m FM and the city Civil Defense repeater. Didn't rub anything together except my hands - it was mighty friggin' cold out by midnight!

> Tell us how it feels to mass-QSO a storm front into submission
> so that hams can walk down the snow-cleared street proudly
> with their certificates raised on high...

If you want to talk about storms, follow those links to websites about the Blizzard of '77, a severe winter storm that killed people. Obviously, I survived...despite the fact that my street wasn't cleared of snow for two weeks afterward.

The guy whose broken ankle I splinted that Sunday, after he fell and broke it on Friday and lay there on his back porch until they found him Sunday afternoon, didn't seem to mind that he was getting medical help from a volunteer either...or that he was transported to the hospital by volunteer personnel from an all-volunteer fire company. In fact, he seemed genuinely delighted that he wasn't going to die.

>
>>Most of the operators of those

>
> Correction, John. NOT ONE of those millions of CB transceivers
> has a ham license. Never did. Not even before they were created
> 47 years ago. See "type accepted" under Part 95.

Read carefully. I said most of the *operators* of those radios don't have ham licenses. Which is the whole point here, the radio can't do much of anything without an operator, now can it?

Now carry on, soldier, and remember, the number of radios does not equate to the number of properly trained operators that are available to operate them.

DE John, KC2HMZ

2316. What The NPRM Isn't

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-26 09:46:02 UTC
From: N2EY@AOL.COM
Message-ID: <1122371162.680877.245450@z14g2000cwz.googlegroups.com>
Source record: 113675

I find it interesting to note what is *not* part of the NPRM, despite a bunch of proposals that asked for changes beyond code testing:

- No change to the written tests at all

- No new entry-level license class

- No free upgrades or consolidations of existing licenses, except that all Technicians will essentially become Tech Pluses (in privileges but not in name).

- No "refarming" of subbands, nor expansion of license privileges except the above-mentioned Techs-get-Tech-Plus-privileges change

And now the big one

- "Entry-level-licensd" hams (for lack of a better term that includes Novices, Technicians and Tech Pluses) will still have
very limited HF privileges. Ironically, they will have only
Morse Code/CW on small segments of 80, 40 and 15 meters, plus
SSB and Morse Code/CW on a somewhat bigger slice of 10 meters.

No digital/data/image modes, no FM on HF at all - even though most of those "entry-level-licensed" hams have all privileges above 50 MHz. No access to five of the HF/MF bands at all.

Seems FCC went for "minimum change".

Is that the best we can do?

I'll agree.

In the USMC, we were fond of the old saying "The Only "Stupid"
Question Is The One You Didn't Ask, But Would Have Kept You From
LOOKING Stupid Later"

The ironic thing is that many years ago there was a petition
request in front of the FCC to allow Amateurs onto GMRS without any
additional licensing requirements, inorder to facliltate "honey-do"
traffic without the spouse having to get an Amateur license. Needless
to say, it didn't go anywhere.

Welcome to Amateur Radio, Design Guy. If you're ever in the south/cental part of Tennessee try the 147.195 (+/COR) repeater in Manchester, TN and say hello.

While I wish something had been included to keep the overall level of effort up, this does not surprise me.

> - No new entry-level license class
>

Here I happen to agree with the FCC's discussion. It's not needed as the current entry requirements are not prohibitive.

> - No free upgrades or consolidations of existing licenses, except that
> all Technicians will essentially become Tech Pluses (in privileges but
> not in name).
>

Are you sure of that? Originally, I thought so too but the wording of the NPRM is not clear. It says no one will gain privileges and no one will lose privileges. Perhaps the Tech with code (Tech Plus) will simply become a closed class like Novice and Advanced. Personally, if their doing away with the code, I think they might as well consolidate all Techs at the Tech Plus privilege level.

> - No "refarming" of subbands, nor expansion of license privileges
> except the above-mentioned Techs-get-Tech-Plus-privileges change
>

The refarming of subbands is a separate issue and should be treated separately. An expansion of privileges is not needed since the upgrade route will be even easier.

Here again, I agree with the FCC's discussion. They entry level hams can gain all this by taking a simple written test to get their General ticket. Besides these privileges make a nice incentive to upgrade.

> Is that the best we can do?
>

Do we really need to do more on the code issue? There are already other proposals around to address refarming, etc.

> 73 de Jim, N2EY

As I've stated before, I think it will become a defacto two license class system. People will upgrade to General soon after passing their Tech test. Personally, any Tech classes that I teach after the change goes through will be a combo class. During the first half of the session, I'll teach the Tech material and during the second half, the related General material. I will actively encourage my students to go for General right from the get go.

Perhaps the FCC is wanting to see how this will go for a while and depending on the results, reduce the number of classes to two.

I am willing to bet that there will be some arguments made to the
effect that once the code is dropped it WILL become a defacto 2-class
license, and they will just go ahead in this NPRM and do it.

Then how far till 1? Then none?

> light your mental lantern. The light ain't come on yet.

The light IS on, Lennie.

I guess it was MY fault for assuming you'd take the whole context
of the message and reply in kind, but then that would ruin your rant.

One does NOT ensure that one's station is operating properly
simply by virture of the digital display of the device in question.

The FCC requires routine diagnostics of the station to ensure it's
compliance.

> Staying WITHIN the band edges >>IS<< "proper operation."
> The ONLY way you CAN stay within (and be LEGAL) is to
> USE TECHNOLOGY!

Yep.

With diagnostic devices EXTERNAL to the device in
question...Signal generators, Spectrum Analyzers, etc etc etc.

> <giving up trying to explain radio to dumbfork stebie>

NOT giving up pointing out how Lennie Anderson tries to misdirect
and deceive on issues pertaining to Amateur Radio...

> LenMaybeIcanDazzleThemWithBSAnderson@ieee.org

Putz.

Nope.

Unfortunately too much of health care is innundated with people trying to leech off the health care system with bogus infirmaties and self-inflicted addictions. Add to this bogus worker's comp injuries and it's not hard to see where the problems lay.

And then compound this with a lecherous trial lawyers association that effectively blocks reasonable constraints on awards for these idiots and then makes it almost mandatory that when anyone comes to the ER that they get the "Million Dollar Work-Up" for thier "headache"...

That's why, for example, if a patient comes to my ER and needs some hydrogen peroxide for a wound, they get billed $12.75 rather than the $1.00 plus some REASONABLE mark-up it would have cost from the local dollar store...regardless if we use the WHOLE bottle or just a few ounces.

Current data trending shows that around 37.5% of our ER patients are LEGITIMATE ER patients...the rest are "clinical" patients or "frequent flyers"

None of which ae my "fault".

Nice try, though. Interesting that you accuse others of "libel" then make so glaringly transparent an accusation...

Sheesh.

They say that imitation is a form of flattery.

Guess I owe someone a "thanks", then...

I just got a QSL card in the mail from "NBL", the Navy base at
Groton CT for the 14 May 2005 Armed Forces Day Crossband Test.

The only problem is that I was on a Civil Air Patrol exercise that
weekend and nowhere near any Amateur HF gear.

Perhaps just a copy error at NBL, but who knows...

cuting of the libel of persons even here

cuting of sexual content

cutting a admission of fraud by Stevies er

cutting of Stevie blaming the victums of our upside down health care
system
>
> None of which ae my "fault".

Someone made you type all I cut stevie you choose it, Indeed you are at
fault, heavy into the busness of fault finding at least, always blaming
others
>
> Nice try, though. Interesting that you accuse others of "libel"
> then make so glaringly transparent an accusation...

nothing transparent I wondered if you were not in part responible, and
you admitted to what I suspected. Stevie never adknowledges his own
role in it, you take your living from health care and deny ANY role in
what we get in the system.

enough folks like you and we get the hopeless muddle we have
>
> Sheesh.

Indeed

Take some responiblity for yourself

One of the things that happens in any organization from time to time,
is that despite apparent majority opinion, a decision is made that is
not majority opinion. Sometimes it is because of the organizations
rules, or what the organization is tasked to do.

The ARS isn't a democracy.

Which brings up an interesting paradox. In a pure democracy, the votors
can vote to eliminate the democracy, and install a dictatorship, whic
can then ignore them and set up a democracy that they can vote to
dissolve, and on and on..... hehe

No "assuming" to it, Markie. It happened.

> Gee NOW you insist I to read your #### in order

In order to "WHAT"...?!?! (Why don't you complete sentences?)

Get the FACTS...?!?!

Heaven Forbid, DeviantBoy, that you'd do THAT! ! ! !

> Never saw any correction

Because you were so "obsessed" with trying to find some way to
redirect all the attention landing in your lap for all the stupid
things you've been doing and saying.

You ALMOST had one, but even then you let THAT backfire on you.

Idiot.

> > > > YOU however RE-INTRODUCED the error after I had already changed it

I'm not posting to this from AOL....Haven't since AOL dropped it's
newsreader features several months ago.

Again...there you are NOT paying attention.

> > > > I don't apologize to pathological liars and deceivers when they
> > > > are culpable.
> > >
> > > your typing not mine
> >
> > Yep. And I acknowledged the error. There was nothing to
> > "apologize" for.
>
> sure was

If ANYone deserves an apology, it would be KB9EQZ. However KB9EQZ
is NOT an active callsign, ergo there's no one to apologize to.

If YOU took some kind of offense to that, then you're every bit the
wimp I have accused you of being, DeviantBoy!

> > > you blew it then you tried to evade responiblity for it
> >
> > Sure I did.
>
> and now you admit to it

I admitted I hit the wrong key. Adjacent letters on the keyboard.

There was not attempt to be deceptive or mistrtuhful

> you sack of ####

Always the witty one, Markie.

Pretty much makes my argument about your maturity and lack of IQ.

> > > you don't admit your mistakes
> >
> > Not true.
>
> you admitted to evading your responiblity not more then one of your
> lines up

No, I didn't.

You're STILL not keeping pace with the attributes, DeviantBoy!

I >>C L E A R L Y<< acknowledged hitting the adjacent key. Oh
well.

> > Ask Jim, N2EY, Cecil, W5DXP, Hans, K0HB, Brain, N0IMD.
>
> why ask I have your admission

You insisted I don't admit to errors. And you also accuse me of "hacking out" text that you insist I don't want anyone to see, yet here YOU "hacked out" your accusation that I don't admit errors. Kinda makes you a hypocrite.

The Amateurs I cited can attest otherwise to my acknowledging errors or making apologies.

Now where's YOUR apology, Markie. You made an accusation and it was shown to be wrong. Are YOU going to own up to it, or just fall prey to your OWN rhetoric?

No, Markie...

That you'd miss the irony that the only "support" that Lennie engenders is from a guy who won't sign his own name to the post and from a devaint/liar.

> cutting stevie sexaul content

There was no "sexaul content".

Once again, you lied.

more stevie lies

I have not hacked out nor do I deny that I have and continue for that
matter to accuse you of refusing to admit to making error or to
apoligize for them

>
> The Amateurs I cited can attest otherwise to my acknowledging
> errors or making apologies.

anyone can attest to lie if they choose I don't ask people to do that

>
> Now where's YOUR apology, Markie. You made an accusation and it
> was shown to be wrong. Are YOU going to own up to it, or just fall
> prey to your OWN rhetoric?

it has not been shown wrong

you blew it

you refused to admit when called on it

refused to pologize for it

you try claiming I have to go looking for your admssions

you compond it by accusing me of retyping your error rather than just
repleing to it

you go on blaming me for your misdeeds

>

True, but read below.

> I mean really, I think it does, and the FCC
> can't claim any damn thing they like,

The FCC doesn't claim any damn thing they like.
The FCC has authority on regulation of radio.

> apparently even claims bordering on the line of
> being unconstitutional!

John,

The FCC has been given authority over all things that involve
radio via past congressional action. That congressional action
constituted the representative process whereby we citizens
OK'd FCC authority.

Cheers,
Bill K2UNK

Glad to prove you wrong again, Markie.

97.103 and 97.307, among others, require specification tolerances
be maintained.

There are others.

The VEC organization has full authority to change written
tests (e.g. specific questions, subjects, etc) without any FCC
action needed. The NPRM specifically mentioned the
process is much quicker than rule making via the FCC.

> - No new entry-level license class

> - No free upgrades or consolidations of existing licenses, except that

I'll have to read the NPRM again. I didn't come to that
conclusion myself.

> - No "refarming" of subbands, nor expansion of license
> privileges except the above-mentioned Techs-get-Tech-
> Plus-privileges change

Didn't the FCC mention that was being considered under
different RMs?

RADIOA HAMS: IT WILL NO LONGER BE NECESSARY TO KNOW MORSE
(AGI) - Rome, Italy, July 23 - To gain an amateur radio
operator's licence it will no longer be necessary to take
a test in Morse Code. Communications Minister, Mario
Landolfi, has signed the decree to eliminate such a test
already abolished some time ago by other countries. "The
Morse alphabet is certainly not pensioned off, but it is -
Landolfi said - a decision due to technological evolution
and the necessity of changing with the times. The bodies
that carried out the tests will remain active, as I have
proposed, for young people and fans, continuing to
recall the importance of the Morse Code for over 160
years. And furthermore there will be a room dedicated to
this at the Museum of Post and Telecommunications in
Rome." (AGI) -

It seems some have emailed me WITHOUT reviewing these "study guides" I have included here...

FIRST LOOK at the links!!!

I have REMOVED ALL the FALSE answers from the tests. (question where "ALL OF THE ABOVE" is true will have all answers left--so you can see every answer which is true--you'll figure it out)

There is ONLY the QUESTIONS and the CORRECT ANSWER TO EACH QUESTION...

BUZZ you still are not quoting any rule requiring such

The operator is respaoniblie if the sation does not comply but nothing
requiring any particular method of ensuring it

same ole shit steve

NOT "inappropriate".

Considering yours and Toiddie's fetishes and deviances, the first
was a possibility.

And you ARE philosophically if not actually "in bed" with N0IMD.

> Obsessed Gay Lid

He is.

> If the Pope Had Met N9OGL, Would He Reconsider Abortion?

A question. Please not the use of a question mark at the end of
the sentence.

> WARNING! GAY PAGAN DRAFTEE IDIOT BACK IN TOWN!

Not inappropriate. You are gay. You are a pagan. You claimed to have been a draftee, and whether you care to admit to it or not, you ARE an idiot.

> KB9RQZ and N9OGL to WED..?!?!

Again...a question. You two DO have sooooooooooooooooo much in common. I am sure you'd be a cute couple...Couple of WHAT, I am not sure, but cute nonetheless.

That's the point made, dimwit.

So do I...like my two cards from MIR. One when I was still
licensed as KC8M, the other with my (then new) K4YZ.

> > I COULD have "pulled a Markie" and claimed it as my own. But that
> > would be lying.
>
> then you admitt o lying good for you

Nope. I said just the opposite.

I stated that had I claimed the card it WOULD have been lying.

Are you really this idiotic, or is it just a "summer thing..."
???

Hey Bill,

It looks like the long battle is just about over. Congratulations are in order, even though I still disagree, but it was probably inevitable. A grand new experiment will soon begin.

So, I guess the big question is what is NCI going to do next?

I remember old conversations with the previous prez in which I am pretty sure it was said that you folks were going to go away after your successful elimination of the the Morse code test requirement. (organizationally speaking, that is!) I do definitely remember that we were told that the sole purpose of NCI was elimination of the test.

Is dissolution still the target?

I've always thought, and still do, that one of the hardest things for an organization to do is go away, even when they are successful in their original purpose.

I predict that NCI will morph into something else. I'm certainly hoping it isn't relaxation of the other test requirements!

> >
> was complete is complete

No, it wasn't.

"Gee NOW you insist I to read your #### in order"

In order to what?

You didn't finish the sentence.

> you are insiting I must read your #### in order, I don't read in any
> particular order and certainly not the order you typed them
>
> your "explanation" is lame, at best

One cannot formulate logical responses without reading the
material "in order", assuming you mean in "chronological" order.

Otherwise your sentence remains incomplete as we await your
explanation as to reading WHAT in order to do WHAT...?!?!

> > Get the FACTS...?!?!
> >
> had the facts stated the facts you just don't bother with facts
> yourself

That made almost as little sense as the previous sentence.

> more of steveie sexaul content cut

There was no sexual content there.

Mark C Morgan uttered a lie.

Talking to yourself I see.

> > You ALMOST had one, but even then you let THAT backfire on you.
>
> whatever you mean by that is unclear

It's patently clear.

You tried to redirect because I hit an "E" instead of an "R" when
typing "your" callsign.

I acknowledged it in the very next post, yet you tried to insist I
didn't.

It's archived for all to see.

You lied. Again.

> > Idiot.

You've not stated what keys you allegedly hit.

I quite CLEARLY stated what I did wrong.

YOU have NOT.

> > There was not attempt to be deceptive or mistruthful
>
> not the point

Sure it is.

Are you suggesting I "apologize" for telling the truth?

> the point was you make and then refuse to adknowledge mistakes and
> refuse to apologize

Apologize to who?

You?

You are as culpable for a "mistake" since YOU reintroduced it
AFTER I acknowledged the error.

No apology needed. And there's no KB9EQZ to apologize to.

> something BYS standard you deserve a mulitweek triade for I'll give it
> in few days

"mulitweek triade"

What the heck was that?

> > > you sack of ####
> >
> > Always the witty one, Markie.
>

> > YOU "hacked out" your accusation that I don't admit errors. Kinda
> > makes you a hypocrite.
>
> more stevie lies

Nope.

You made the accusation.

I provided references to persons who can attest to YOUR error

> I have not hacked out nor do I deny that I have and continue for that
> matter to accuse you of refusing to admit to making error or to
> apoligize for them

What error?

Apologize for what?

> > The Amateurs I cited can attest otherwise to my acknowledging
> > errors or making apologies.
>
> anyone can attest to lie if they choose I don't ask people to do that

What lie?

Are you NOW saying that those persons would be lying if they indeed
acknowledged that I had offered public apologies before?

If so, you'd only be strengthening MY assertion of what a lying
idiot you are. (Not that it requires any...you do a good job of it
without special request or effort.)

> > Now where's YOUR apology, Markie. You made an accusation and it
> > was shown to be wrong. Are YOU going to own up to it, or just fall
> > prey to your OWN rhetoric?
>
> it has not been shown wrong

Sure it has.

YOU said that I don't admit errors.

I provided you references who can attest otherwise.

Why do you balk at asking them?

> you blew it

Nope.

> you refused to admit when called on it

I already had acknowledged my error, Markie.

It's right there in the archve of THIS thread.

Why do you persist in saying otherwise?

> refused to pologize for it

What's to 'pologize' for?

> you try claiming I have to go looking for your admssions

Nope.

You made a claim I don't do something.

I provided you references to sources that can verify otherwise.

> you compond it by accusing me of retyping your error rather than just
> repleing to it

You did.

> you go on blaming me for your misdeeds

Nope. I made the initial transposition of letters. I
acknowledged it in the very next post. There was no misdeed.

Just more lies from Mark C Morgan.

> license, and they will just go ahead in this NPRM and do it.

Well, let's look at the history....

Before 1951, there were effectively two license classes, A and B. (The third license class, C, was just a B taken by mail). Both allowed access to all
amateur frequencies and all authorized modes, at full power, with one exception.
The exception was that only Class A hams could operate 'phone on the ham bands between 2 and 25 MHz.

>From February 1953 until November 1968, there were effectively three license classes, Novice (1 year 1-time-only newcomer license), Technician (VHF-and-up experimenter license) and General/Conditional/Advanced/Extra (all privileges licenses). Some people refer to that time as a "golden age".....

In 1998 FCC proposed reduction to 4 license classes (open to new issues, that is) - Technician, General, Advanced, Extra. In 2000 they went one step further and closed off the Advanced, too.

So there's definitely a precedent. OTOH, FCC has steadfastly refused free upgrades.

> Then how far till 1? Then none?

Admin work - that's the rub.

All the QPC/VECs are allowed to do is increase the size of the
question pool. They cannot change the methodology of the written test,
such as how many questions are on the test, the passing grade, the
marking method (some tests take off points for wrong answers so that if
you don't know the answer, you're better off leaving it balnk instead
of guessing), etc.

For example, the current format is multiple-choice with 4 possible
answers. Can the QPC/VEC go to six possible answers (reduces the
chances
of a pure-guess correct answer)?

> > - No new entry-level license class

It's not clear to me - I just assumed that since the Tech requirement
would be Element 2, and since all Tech Pluses are being renewed as
Tech, and the only difference between Tech and Tech Plus is Element 1.

> > - No "refarming" of subbands, nor expansion of license

> > Is that the best we can do?
>
> What else do you want?

The problem I see is that the current entry-level license funnels people to VHF/UHF. This came about in part because of S25.5, which has been history for over two years now.

Now there's nothing wrong with VHF/UHF operating, but it has certain limitations. With basic equipment it's usually limited to local and maybe regional communications. It's also not the easiest part of the spectrum for homebrewing.

Wouldn't it be better to offer newcomers a more balanced selection of frequencies to use? And more than two modes on HF?

I disagree slightly. I saw the personal-communications aspect of amateur radio become a big draw in the middle 1970s, with the proliferation of repeaters, autopatch and small, lowcost VHF/UHF FM rigs and HTs.

I've known plenty of folks who got their licenses 20, 25, 30 years ago for just such purposes. Some went on to other activities in ham radio, some didn't. Some are still hams, others have replaced their ham rigs with cell phones.

Of course when the written testing for Tech was reduced in 1987, there was a boost. And when the Tech lost its code test in 1991 there was a boost as well.

> Especially in states such as New

Excellent point! It's legal to hold a mike or operate a Morse Code key while driving, though.

Exactly. And I doubt that such volunteers would be called "hobbyists"
just because they're not paid..

There's also the fact that while cell phone coverage continues to
improve,
there are plenty of places where it's not dependable. The last time I
was in the Finger Lakes region there were plenty of "no service" places
on
my cell phone, but far fewer places unreachable by repeater.

IIRC that affected a lot more than 10 million people.

I'll close with this comment:

Some folks seem to think that all emergencies are the same and that all
localities are the same as what they've experienced. IOW, if they
didn't
see Amateur Radio playing a front-and-center role in a particular
emergency in *their* community, then Amateur Radio doesn't really play
such a role at all.

Which just isn't so.

> > Crossband QSL Card

I didn't say MY card, blockhead.

I SAID:

They say that imitation is a form of flattery.

Guess I owe someone a "thanks", then...

I just got a QSL card in the mail from "NBL", the Navy base at
Groton CT for the 14 May 2005 Armed Forces Day Crossband Test.

The only problem is that I was on a Civil Air Patrol exercise that

weekend and nowhere near any Amateur HF gear.

Perhaps just a copy error at NBL, but who knows...

73

> > Explain how?
>

> >
> > I didn't claim it.
>
> you have in your title stevie

I identified an object, Markie.

I clearly stated I didn't earn it.

QUOTE:

No boasting.

Pointing out that ethier the Navy ops made an error or someone was
bootlegging my call.

> > > > > > I just got a QSL card in the mail from "NBL", the Navy base at

> isn't yours

Nope.

I clearly stated, and have repeated, that I didn't make the
contact.

YOU did.

> cuting more stevie juvi stuff

The "juvi" stuff is you trying to claim something that obviously
isn't true.

They could also, therefore lower the size of the pool.
Likewise, they can change subject areas addressed
by questions in each pool. In doing so, the VEC orgs
could migrate the current Tech question pool to a
pool the more aligns with a "beginner license" test.

> They cannot change the methodology of the written test,

I agree. I liked the idea of a broader beginner license.

Cheers,
Bill K2UNK

> So, I guess the big question is what is NCI going to do next?

In the USA short term, it still isn't over until the FCC issues an R&O.
Internationally (the I in NCI stands for International) there are still
many countries that have not dropped all code testing.

> I remember old conversations with the previous prez in which I am pretty
> sure it was said that you folks were going to go away after your
> successful elimination of the the Morse code test requirement.
> (organizationally speaking, that is!) I do definitely remember that we
> were told that the sole purpose of NCI was elimination of the test.
>
> Is dissolution still the target?

My personal viewpoint is that once the USA ends code testing,
then the role of NCI will pretty much be completed...especally
since many other countries already have done so.

> I've always thought, and still do, that one of the hardest things for an
> organization to do is go away, even when they are successful in their
> original purpose.
>
> I predict that NCI will morph into something else.

I doubt it myself. I'm also an ARRL member and focus
my other ham policy opinions primarily though ARRL.
But, again, I can only speak for myself.

> I'm certainly hoping it isn't relaxation of the other test requirements!

I would personally oppose any such move and, I believe, I
am familiar enough with the other NCI directors to safely
say that none of them want relaxation of test requirements
for written.

Personally, I do like the idea of a broader entry/beginner
level license that allows more HF than the Tech does

now...but that's another issue and one that ARRL proposed.

Cheersm

agian why aren't these folks caught by the FCC

and why aren't other like em

If I were doing something I expect not to be operating as I do on VHF
and up and not near the FCC's back yard as the poor unforuantes mention
in the why are you saying Shit thread elsewhere
but these folks and others like are operating on HF with it wide range
than my signals

Me if I blow it I can see them not missing it but these clowns

Believe me, one does *not* want to use a repeater without authorization. It won't be the FCC that catches you, it will be the repeater owner. They may report you to the FCC, but will probably file a suit against you. See ya in court ;)

Hello, Jim

Very true. That nasty ice storm in the Northeast sometime around 1997 had folks screaming for amateurs with hf rigs. No power nor communications for hundreds of miles. No cb, vhf, or uhf rig is going to be of great use. You need 75, 60, or 40 meters for solid communications for hundreds of miles (near the disaster; you don't need 20 to talk to Italy LOL).

As you state, if someone doesn't see it in their immediate area, it must not exist. Something like folks thinking that despite gasoline reaching $2.40 per gallon and heading up, since they can get gas at their local gas station, we don't have an oil problem.

I think you hit the nail on the head.

Don't worry about a few folks that may say something that may irritate you. Although licensed first in 1962 and getting my extra in 1966, unless one studied other parts of the FCC rules beyond the amateur license, this could certainly be an honest question. I've delved into such a bit as I obtained my 1st class radiotelephone license in 1966 as well as my telegraph license the same year. The FCC has more rules than the hams have a**holes, I can assure you LOL.

Some hams are concerned that the tests are being watered down; I suspect the answer you got was someone concerned about the watered down tests. Although it didn't appear directed as a flame, I agree he should have simply answered the question without pontificating.

Try not to concern yourself too much. There is a lot of bickering going on (can you tell by reading many posts ROTFLOL) amongst the licensed folks; you happened to post a question read by someone with a short fuse.

If you have studied a bit for your ticket, you will note that there is no sanity test for licensed amateurs.

Oooops. I've gotta go. Some men in white coats asking for me by name
.....

robert:

Frankly, what about amateur radio do you see as being so difficult. I keep seeing this same idea reflected in others text--I thought them only joking?

What freaks (or freqs) the various licenses can operate on?

Ohms law?

Formulas for power?

Wavelength?

Concept of extremely dense rf fields posing a danger?

Harmonics and the need for traps, filters, etc?

Power limitations on various bands?

What is it which you see as a real road block and bordering on the edge of rocket science? I just don't get it?

Perhaps they will now be referred to as:

"CB Hammies"
"HF Chicken Banders"
"10 meter 10-4 buddies"
"Black Plague of the Ether"
"Radio Bozos"
"NoKey KeyClowns"
"Ham Truckers From Hell"
????

... feel free to add your ideas and/or suggestions...

After a proper title is chosen for them, the license could reflect that name.

There ain't nothin' "light weight" about those multikilowatt leen-e-eers those boys are a packin'.

They pack a WALLOP! One of those channel 6 "big boys" is 15+ kw and lives within a mile of the state capitol building here in sacramento! And, worse, he is on almost everyday of the week!

You'd think those guys in the capitol building would get tired of getting their hair singed!

After re-reading the NPRM, I'm no longer so sure of that as I was. The appendix shows the new wording of the changed sections and the sections that show privileges have not been changed. So it may be that the FCC intends to keep the distinction between flavors of Tech and make the codeless Technicians upgrade to get any HF privileges. Their extensive discussion sections also seem to support that. Thirty pages including footnotes is a lot of details to digest.

If approach is true, there are a lot of Technicians in for a shock.

Anyway, I think the FCC needs to clarify that.

And channel 6 will be heard where?

They are depending upon sporadic e. Plus the fact that a kilowatt of CW will run right through a 15 kilowatt am station. Should run right through a 10 kilowatt ssb station, for that matter :))

I shan't get into the fact that other bands can yield far better results depending upon distance, time of day, sunspot cycle, etc.

160 meters used to be fine for me anywhere in the country at night. That was running 25 watts in one section (we were limited to 25 watts here due to loran) and 65 to 75 watts in the other section.

A lowly 100 watts or so was fine to run phone patches to the U.S. from Guam Island. Throwing on the afterburner (Henry 2K) and running a kilowatt was fine almost anytime (although we had to give up 40 meters due to interference to the movie theatre next door - don't ask; we were on a military base and the captain was far more forbidding than the FCC could ever have been LOL).

I had a direct contact with Webster, NY (a suburb of Rochester) running only 15 watts from Guam (10,000 miles away, perhaps). When he reported the signal was not too strong, I hit the Henry and nearly knocked his speakers off the shelf. Nothing like picking a frequency appropriate to what you are trying to do. 10 meters, 15 meters, 20 meters, or 40. We ran those for the long haul stuff from Guam. 40 or 20 at night; 20 through 10 during the day. The exact band depended upon local time plus the time zone of where you wanted a contact.

Heck, I worked a novice running 75 watts in New Jersey from Guam on 40 meters. Now tell me how good channel 6 is. Excuse me whilst I laugh my tail section off. 10 or 15 kilowatts when 75 watts will do? You must have cheap electric power or 50 cents per gallon gasoline :)))

Heck, I had a couple of very good chats with blokes from England and Australia running only 6 aa alkaline batteries into a handheld. All rf path; no Internet involved.

Channel what was it, you said?

73 from Rochester, NY

In the discussion section of the NPRM, the FCC specifically said they would
not address any changes at this time. I think they'll stick to it while
they consider other petitions.

In the dead of winter.

Good example of how different emergencies can be.

In the case of an earthquake, tornado or hurricane, the
actual event is usually fairly short-lived and the weather
after the event is often fairly benign. An ice storm or
a blizzard is a completely different story.

> No cb, vhf, or uhf rig is going to be of great use. You

Bingo!

> I think you hit the nail on the head.

btw, in the ice storm of 1997, HF Morse Code was used at times
because SSB simply could not get through the auroral flutter and
the low signal levels.

Many HF amateur stations were on emergency power and using makeshift
antennas then.

Does this mean Morse Code testing must continue? Of course not!
All it means is that Morse Code is another tool in the toolbox.

Perhaps just like Hitler identified the enemies of Germany? Ummmmm ....
never stop thinking. Do not allow someone else to do you thinking for you.

Perhaps you think Rush Limbaugh is the proper source for news? Pravda was
the source of all news in the U.S.S.R.

Be very careful what you wish for; you might get it.

This is not to aid our enemies; it is only to warn you that some folks twist
facts to get you to go along with their agenda.

Best regards from Rochester, NY

Thanks, Jim, for that input.

You are correct; it is another tool. For all the arguing that goes on, it isn't that bad an idea to have a cell phone, a ham radio, and even *gasp* a cb if you are travelling in sparsely populated areas. The more tools one has, the less likely one is going to get "stuck".

Hello, John

With a reliable daytime communications range of perhaps 5 miles in this city (up to 20 miles at 3 am in the morning when most folks are asleep), if you multiply reliable communications range by the number of folks, cb will fall short. Even shorter if you need a good reliable 100 or 200 mile range 24/7.

I see no "coming to Len's "defense"" in Mark's comment.

> Gee, Lennie! The company YOU keep!

Steve, if you treated folks with a smidgen of dignity, you might find a kind comment every once in a while as well. But you don't, so you won't.

I'd like to see the schedule that Riley has Steve's station undergoing
such "routine" diagnostics. Must be some kind of license modification
or compliance agreement for out of band operation.

BUZZ indeed. Steve reads much into the rule, but does not read the
rule.

Jim:

In my area, 250 watts is the norm on CB, probably about ~25% of all other stations are 400 watts and better. A lot of the truckers have kilowatt+ rigs in their trucks... there are a handful of 5-50 watt stations out there.

Omnidirectional antenna rule the airways, but there are beams, yagis, quads, and other CB specific directional antennas about (the scanner is one example, ancient antenna made by antenna specialists and lots still around.)

Freebanders and pirate stations abound.

It is possible to reach out 50+ miles here on the valley floor if the channels are quite with a 100 watt linear in your mobile (2-6 am in the morning) otherwise 10-30 miles is about it.

Channel 17 is the truckers chan though the central valley here, most of calif I think.

John

"Unclaimed" might be able to better elaborate on this Jim, but I think
his message was a finely done bit of sarcasm that you and Mark fell for.

And if it wasn't - it should have been! 8^)

Could be, Mike

I'm limiting myself to 3 beers per night.

I'm on my 3rd quarter keg, so don't expect much thought process from me this evening LOL

73 and have a tall cool 807,

John,

Sorry if I'm not impressed; 75 and 40 meters are good for hundreds of miles on low power; thousands of miles at night. I ran 25 watts on 160 meters and was good to cover the United States at night.

Power is not everything. The ability to change frequencies (I'm talking decades, not channels) will determine what distances you can send and receive well to. I remember well breaking into a group on 75 meters in the Carolinas. I was running well under 1 watt. Way *way* under 1 watt.

160 meters did me quite well even in the daytime. Check in to ground wave. Not what you think of ground wave (which is space wave); true ground wave. At that frequency, if you have it vertically polarized, the wave will react to the curvature of the earth as a knife edge. I could pound into Washington, D.C. in the afternoon. With all of 65 watts.

My handheld reaches into Canada 24/7. On 440 MHz. Of course, I have to rely on a decent Canadian repeater for that, but the fact is that I hit a Canadian repeater directly from the handheld with no Internet involved.

On hf, the proper choice (I'll leave 160 out of this as the antennas are quite unwieldy) between 80 and 40 will allow you several hundred miles 24/7. With a modest amount of power.

So I remain unimpressed with power alone. I buzzed right through a kilowatt station years ago running only 75 watts. It isn't the size of the ship; it's the motion through the ocean :))

73 from Rochester, NY

There maybe some "serious" radio hobbyists currently "freebanding"
that we might get to "repent" and give up freebanding and get
ham licenses. Of course others would be clowns we'd never
want....

In a contest a couple years ago, I discovered that I was working a lot of stations on the west coast at qrp level. I had tuned my antenna at low power, and forgotten to increase the power level. With my plain old vanilla 96 foot dipole at 50 feet. If I could hear 'em, I could work them. Funny - if you go to some of the antenna gurus, they'll let you know what a horrible antenna that is - good only for warming clouds...

Amazing what can happen on 40 meters with a relatively simple antenna and a few watts. During the NEQP, some of the Hams up there have accused me of melting their coax! 8^)

> So I remain unimpressed with power alone. I buzzed right through a kilowatt
> station years ago running only 75 watts. It isn't the size of the ship;

Sometimes I think a little propagation education might be in order for some folk. I still remember the fellow who was going to have a bulletin on 10 meters, then 20 meters. For American coverage, those are two of the *least* likely HF bands I would choose.

Not that I would choose to broadcast on our bands.....

Don't feel bad; I'm very good at what I do. This will earn me an
exemption on the Pro USENET Trolling circuit next year. My Tour Card was
due to expire in August and I was a little desperate.

Another reason not to worry is that even the best trolling is barely
able to keep pace with some people's sincerely held beliefs.

The "juvi ####" is your language.

And how do you suggest that I wound up getting a QSL card for a
station I personally didn't work, Mark? Either someone impersonated
K4YZ, asI suggested, or someone at the Navy station miscopied a
callsign, again as I suggested.

it's already out there. google for 'black noise' and not only do you find
some rap group but also a six-sigma site that uses the term for a non-random
cause of variation. there is also well known 'pink noise' that is often
used in audio testing. and of course there is the generic 'colored noise'.
this site lists not only white and pink but also brown and blue:

Brain, I treated you with PLENTY of "dignity", only to watch you
continue to lie and deceive others about your "achievements" in general
and certain Amateur Radio issues in particular. You violated the
dignity of all here with lies and tales that were laid bare, only to
have you insult us by trying to perpetuate them.

You're a busted liar. You''ve been caught lying so many times or
making absolutley assinine assertions that you wouldn't even begin to
TRY and substantiate which only further strengthens MY assertions about
your lack of character and untrustworthiness.

In short: I'm not the least bit concerned about YOUR estimations
of how much dignity you perceive I extend or would be due.

As for "a kind word"...Whelp, I've had plenty of them, even in
recent days, so I am hardly worried that I might wilt away from the
lack of affection of my RRAP "peers"...ESPECIALLY you, Lennie, Toiddie
or Markie...

Other than your name and that you are a documented deviate/liar,
what's there to believe about anything YOU say...?!?!?

No one wants to make the tests an "ORDEAL", Mark...

Some of us DO want the tests to (1) be a valid demonstration of
the applicant's comprehension of the required knowledge, and (2)
fulfill the caveat of the Basis and Purpose of Part 97.

Anything else is "Drama Queen" rantings. No more...no less...

No lies concerning my acheivements, and I do have opinions about
amateur radio issues. You like none of it and so launch your personal
attacks. No kind words for you. Too bad.

Or if they saw Amateur Radio playing a role in an emergency in *their*
community, then Amateur Radio plays such a role in all communities.

Obviously not enough truth for you to substantiate any of it...

> (UNSNIP)...and I do have opinions about amateur radio issues.

None of those substantiated by reality either.

> You like none of it and so launch your personal attacks.

I consider YOUR "attacks" (mistruths, deceit, etc) about Amateur
Radio to be an "attack" on me. You make disparaging, untrue statements
about Amateur Radio and expect it to be blown off.

Sorry.

> No kind words for you. Too bad.

Plenty of kind words for me...that none of them come from The Foulmouthed Foursome is of little disappointment to me!

Have a nice day,

Steve, K4YZ

Absolutely.

Whoever suggested that to you lied to you, Markie.

I am a wage earner. More than my fair share of 40 hours a week, I

might add.

UNQUOTE

So, Markie...this makes twice in two weeks that you've accused me of taking things that I haven't taken.

First you alledge that I am receivng public funds for "disability" allegedging some impropriety.

Then you claim I am "claiming glory" for a QSO I didn't make when I clearly stated that I never made the contact from the git-go.

Where did you get the idea that I am on "the public dole" and why do you continue to lie in the face of glaring evidence to the contrary...???

Source record: 113823

There was an earlier discussion here about how several places in the U.S. now have cross-linked amateur radio, GMRS, business, and even CB repeaters. I have monitored a few of these set ups in larger cities. Even heard one cross-linked ham-GMRS repeater out in the boonies of Texas, think they were cattle ranchers.

73,

Lloyd

But I can prove via various sources that Amateur Radio plays a role in MY
community, that of New York, Missouri, Florida, Georgia, Virginia,, S.
Carolina, Maryland--and EVERY state in the union and has done so since the
beginning. Just because *YOU* say it doesn't make it so.

Like I said, when it comes to official emergency communications sanctioned
by Federal, State, and local authorities, SHOW me documented evidence that
CB EVER gets invited to the party!! ("TAN FER THAR, WE IS A-STANDIN' BY THAR
ON 27.555 TO PASS THAT 'AIR EEEEEEE-MER-GEN-CEE TRAFFIC THAR, MERCY SAKES,
GIT BACK, AH KNOW WHUTCHA MEAN THAR---SQEEEEEEEEEEEEEK:!!)

Kim:

I know you have been offended, and now you wish to attack, belittle, defame and outrage the object of your dislike and/or hatred (me!)

However, be careful, in your attacks you may end up disclosing far more about your own personality, your mind and your caliber than you would wish to disclose.

You do not need all the others to band with you in your attack of me, indeed, it is counter productive to your goals. Stand on your own two feed, Dee has set an example of a strong/intelligent woman able to defend herself, stand others back from her "space" and win the respect which she rightly deserves--you would be well advised to study the high standards and excellent example(s) she sets.

There is nothing real to fear here, we are all ladies and gentlemen (well, mostly.)

If you have noticed that I, "March to the beat of another drummer." You are correct. If you call me a, "Non-conformer", you are again correct. If you call me a "free thinker" you are again correct. If you point out there may be few who have my personality traits, I suspect you may indeed be correct.

If you expect those to be reasons which would make me "want to be like everyone else" you are mistaken.

In short, "I do not shame into 'my place' easily." You may wish to pick a different tool to use on me.

Warmest regards,
John

That's incorrect. What you said was "conutieis". Now, you've written "countiries". Want to go for "countries"?

I could have reasonably deduced "countries" from your "countiries", but I would never have gotten it from "conutieis".

If the word "countries" is correct, then we still have some problems with the meaning:

"I live in the US was born Prague which was few [countries?] ago over there."

Were you born *in* Prague? Did you really mean that Prague was a few countries ago? Prague still exists. Did you mean that Prague is in a different country than it used to be in? That would be correct, but it was only one country ago. It was in Czechoslovakia; now it is in the Czech Republic. How much chaff are we to go through to arrive at what you meant to convey?

Sadly, he's with the originals now...

Q: How many Bush Administration officials does
it take to change a light bulb?

A: None.

There is nothing wrong with the light bulb; its
conditions are improving every day. Any reports
of its lack of incandescence are delusional spin
from the liberal media. That light bulb has served
honorably, and anything you say undermines the
lighting effect. Why do you hate freedom?

Mark's philosophy is that if you can't understand what he wrote,
no matter how bolluxed up, it's *your* fault and *your* problem,
not his. That's obviously illogical.

There's a limit to even the best error-correcting codes. But they
all depend on the message being correct when transmitted...

It is against Usenet convention to post binary files to non-binary groups. That is why binary groups were invented. Binary files are usually very large should not be posted to regular news groups as these groups are archived forever. The binary groups are purged ever so often, so it isn't prudent to archive large binary files in regular newsgroups.

Here's an update on the "when will FCC drop Element 1?" pool.
This means the effective date of the FCC action that completely
eliminates Morse Code testing for any class of amateur radio
license in the USA.

Note how almost everyone's date, including mine, has already
passed:

WA2SI: September 13, 2003 (first prediction)
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004 (first prediction)
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004 (first prediction)
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW: May 22, 2005
N8UZE: July 1, 2005
N3KIP: December 31, 2005 (second prediction)
N2EY: March 1, 2006 (second prediction)
KB9RQZ: April 1, 2006
K2UNK: July 1, 2006 (second prediction)
AB2RC: July 1, 2007
KB3EIA: July 5, 2007
W5TIT: June 1, 2008
WA2SI: Complete elimination not within the foreseeable future (second
prediction)

Anybody already on the list want to add a prediction? If so, the
"rolling rule" (thanks Dee, N8UZE) applies:

If your prediction on this list is a year or more in the past, you can
add a new one.

At this point everyone before and including N8UZE can add a new
prediction.

All predictions stay on the list.

73 de Jim, N2EY

Allow me...

The "news" is that BS Baxter is trying to file a routine renewal
for his Amateur license.

As presently issued it expired in mid-October.

Tht issue being that he's had numerous NAL's and has one presently
pending against him, ergo it's highly likely that the FCC will NOT
routinely renew his license.

The "good" news for Baxter is that if his legal proceedings
continue past the expiration of his license, the FCC will be required
to continue to allow him to operate K1MAN until it is resolved one way
or the other since he filed his renewal in a timely manner.

Nope.

Clear sign that I have things that mean a lot to me, Amateur Radio
being one of them.

<Markie Censored Sentence Replaced.>

> You make disparaging, untrue statements about Amateur Radio and expect > it to be blown
off.
>
> Sorry.

Don't know what made Markie think that was "non operative"...

THAT was a "clear sign" that Miss Morgan doesn't have an adequate
respose to the statement and knows it to be true.

> You are NOT Amateur Radio

I >>AM<< part an parcel of it, though...just like you.

I am not "America" either, yet when America was threatened in my
day, I came to it's service. I serve it still. As I come to the
"defense" of Amateur Radio when I perceive it as having been sleighted
with inappropriate innuendo or out-and-out mistruths and deceit.

> You clearly need to get a life

I have one. Amateur Radio is a big part of it.

> Is it paranoia or meglomania?
>
> or both

Neither. It's pride and respect.

> It is also a clear sign of your disconet with reality that you
> preceieve any disagreement with your positions as an attack wether on
> yourself or Amateur Radio

My what? "disconet"...?!?!

Markie, don't even pretend to know what you're talking about if
you can't take the few extra seconds to slow down and TYPE CAREFULLY.

Typing like an illiterate idiot only served to make you look like
one.

> > Sorry.
> >

Maybe not Steve. As I understand the "new FCC system" is that if you have a application on file, and also a unpaid fine. You stay off the air till you satisfy the fine in one way or another.

Markie, Markie, Markie...

Out-and-out lying A G A I N......

I hung this carrot out in front of you to see if you'd pony-up the true answer.

I guess you think I didn't see the posts here where Brain tried to alledge that I am "on disability" and receiving "public support" abd that you interacted with taht.

Only more proof that neither of you have the stones to own up to your assertions with facts.

> > Then you claim I am "claiming glory" for a QSO I didn't make when
> > I clearly stated that I never made the contact from the git-go.
>
> becuase by titling the post that way you did are are claiming that
> glory falsely

No I wasn't. I identified an object. NO WHERE in that "title" did I say, "I worked a crossband contact". I have done so in the past...even been on the military side of the contacts (When "NZJ", MCAS El Toro participated in the tests in the 80's...but not since...)

> > Where did you get the idea that I am on "the public dole" and why
> > do you continue to lie in the face of glaring evidence to the
> > contrary...???
>
> from you of course, and no eveidence to the contary has been presented

Sure it has.

My name does not, nor has it ever, appeared on any public assistance roles.

Nor did I claim any "glory" in pointing out that I receved a QSL card for a contact that I clearly stated from the git-go was issued to me in error.

Mark C Morgan is now, has been and in all likelyhood will forever be an untrustworthy, lying punk.

Proven. Archived. In his own words.

Steve, K4YZ

2510. Stevie tries being reasonable to me???

becuase it had nothing to do with the point being made
>
> THAT was a "clear sign" that Miss Morgan doesn't have an adequate
> respose to the statement and knows it to be true.

more stevie meglomanina and paranoia

it had nothing to do with the point

>
> > You are NOT Amateur Radio

>
> I >>AM<< part an parcel of it, though...just like you.

which means that I , BB and Todd have to right to express opinions
about it, to disgree with you and hold differeing points of view, but
anything you disagree with becomes an attack on the ARS and on You,
that is paranoia, and/or meglomania

>

which mean you are reacting in paraniod fashion to the fact that Other
folks have a different philosical point of view

I will use coments from recent ARES posts as an example

I say the PR around ARES is overblown, that does not mean I am
attacking ARES as useless, merely that it's PR is over blown, and with
good reason by the ARRL the FCC and the served agencies, that merely a
less stiring endorsement of ARES than you seem to want

Myself, BB, and Lenn have different levels of opinion on the roles of
ARES and the nature of the PR yet you lump us all together as attacking
ARES

it is not "inappropriate innuendo" to try and get around this spin to
look for the turth, but to you no one may challenge the spin, and there
is ALWAYS spin in America today
>

> Kim:
>
> I know you have been offended, and now you wish to attack, belittle,
defame and
> outrage the object of your dislike and/or hatred (me!)
>

If you believe that I have been an attacker, belittler, defamer, and that I am outraged and/or have hatred for you, I say have fun with your apparent little trip that you are on. Your significance to me doesn't measure up much more than something akin to a gnat that flies up one's nose on an otherwise wonderful Summer night.

>
> However, be careful, in your attacks you may end up disclosing far more
about
> your own personality, your mind and your caliber than you would wish to
> disclose.
>

I far from fear any disclosure about myself. I lead much too boring a life to care about anyone knowing Kim Walker. In fact, if there's anything you'd like to know, just ask. I can always deny a request, but doubt that I would. Anyone who knows my history here in this newsgroup would be hard pressed to say I am shy.

>
> You do not need all the others to band with you in your attack of me,
indeed,
> it is counter productive to your goals.
>

Mmm. And, uh, just what "goals" do you think I have? This is getting very interesting.

others
> back from her "space" and win the respect which she rightly deserves--you
would
> be well advised to study the high standards and excellent example(s) she
sets.
>

I fully agree that Dee has high standards and has quite an excellent record of crisp, clear, concise communication. However, I fail to recognize what you feel she--or I for that matter--needs to defend herself or myself from. What, exactly, are you saying, John, that we should feel threatened by you or someone else in this newsgroup? If you are saying that, perhaps you would care to enlighten us as to why we should feel threatened or, at a minimum, why you think we would need to defend ourselves?

I need not study a thing about Dee. She's been around long enough for me to respect her, like the things she has to say, and know that we wholeheartedly agree on some things and wholeheartedly disagree on some others...as it should be or, should I say, as I like it. How boring it would be for everyone to believe and think the same way.

>
> There is nothing real to fear here, we are all ladies and gentlemen (well,
> mostly.)
>

I fail to recognize why you keep bringing up fear. However, if you've got yourself off on some delusion, far be it from me to attempt a reality check for you.

>

>

I haven't given you much more thought than to decide that--from my perspective--you are one weird dude who apparently is quite impressed with himself. That's it. Sorry. Well, no I'm not. I'm not sorry I feel that way at all.

>
> If you expect those to be reasons which would make me "want to be like
everyone
> else" you are mistaken.
>

Oh, hardly. I am one of the most forefront non-conformers I know. Why would I want or expect anyone to be like everyone else? I can think of nothing more ugly in life.

>
> In short, "I do not shame into 'my place' easily." You may wish to pick a
> different tool to use on me.
>
> Warmest regards,
> John

>

First, fuck your warmest regards. It's quite obvious you'll say things that you don't even feel are true, with that sentiment as evidence. IF--and I doubt this--you intended the sentiment in all seriousness, take just as serious my refusal to accept them. I don't care about what "place" you have in life.

Oh, and as far as tools--you seem to have a whole host of them all by yourself... Perhaps next time, when I have a comment to give to someone else, as I did to Jim, you'll not feel so compelled to be so affected by it?

Buhbye, Little John...you're just the other side of twisted for me, and I generally don't allow myself to get tangled up in people's fantasies. I am far too busy for that.

When any application is filed it is posted on the FCC system as
pending. First it's pending then it's granted.

your quote has nothing to do with the matter years ago you mentioned it and now you deny it I simply don't beleive you in cahnging your story again

>
> First you alledge that I am receivng public funds for "disability"
> allegedging some impropriety.

yes based on your statements in the past and present

your quote supports the impropriety, as in being able to work 40 hours you clearly should not eleigble

I have no reason beyond your word that you are not double dipping, as a point of fact I believe you are, I have not been bringing it up since then since I don't think it that important, but since you insist I think you are stealing for the govt monies you are not entitled to

That isn't libel BTW since I clearly state it is my opinion

>
> Then you claim I am "claiming glory" for a QSO I didn't make when

> contrary...???

You have presented NO eveidence to the contrary, none at all, Indeed I don't think you or anyone could present any eveidence in this forum

I got the idea form your post of some 6 years ago, and emails you sent in the same time frame

It is no lie when I state that I believe you are comitting fraud of some Govt agency.

wether you are or not is another matter but that I have formed that opinion is a fact

Kim:

Then I stand corrected, obviously I was mistaken--we simply have nothing to discuss...

Strange, that has never happened before, oh well...

Dee, did I see a post from you--I was just trying to look it up--where you said it looked to you like the No-Code Techs would have to upgrade to.....can't remember what class it was that was said? But, at any rate, it was stated (maybe by you) that some upgrades would have to happen?

Can you direct me to the post? I am curious about what I was reading now. If it wasn't you, no matter, I'll see if I can come across it again.

Ah! Here it is...wouldn't ya know it? OK, so you're thinking the NPRM in
its submitted form, if accepted and passed, would mean that Codeless
Technicians would have to upgrade?

I agree with you--lots of folks in for a shock. I am now intrigued enough
to look through there and see what it says.

My initial thoughts are that, to do so, would seem to open up a whole can of
worms from a administration perspective. I mean, as it is, I have to
produce the actual piece of paper to prove that I have the 5wpm endorsement

(if I wanted to upgrade to General under the current licensing structure).
That is, if I understand the "way it works." LOL

So, there'd be more affected than just the No-Code techs, I think. For instance, I couldn't begin to even find my endorsement and I am not sure I'll ever be able to. That would mean, essentially, I am a Codeless Tech?

Unless the FCC brearucratic language is confusing, it
looks like his renewal went thru. So maybe he
ponied up the money????

But looking him up at the fcc database shows his
license expiring on Oct 17, 2005 so I don't know
what the above (if in fact real) means....

Similar to informal band plans, by gentlemen's agreements
no binary file posting on non binary file newsgroups.
"Binary" newsgroups are usually marked "alt.binaries.whatever"

Robert:

I am aware that it would be "tacky" to start hundreds of binaries flowing in the group here.

However, a uuencoded/decoded binary of pics of an op, shack, equip, antenna, object or place of interest, etc only enhances the newsgroup experience...

But don't even get the idea these old farts are fooling me, they couldn't uuencode a binary and post it if their lives depended on it... and even if the pic was a hot mama in a thong--they'd die before uudecoding/seeing the pic! <grin>

Robert:

Do you see a pattern here, they can't do it (from lack of knowledge and unwillingness to learn a new method), so they just attempt to stop everyone else--now there is the real "state of amateur radio today!"

Here's an update on the "when will FCC drop Element 1?" pool.
This means the effective date of the FCC action that completely
eliminates Morse Code testing for any class of amateur radio
license in the USA.

Note how almost everyone's date, including mine, has already
passed:

WA2SI: September 13, 2003 (first prediction)
KF6TPT: September 29, 2003
KC8EPO: December 31, 2003
K2UNK: January 1, 2004 (first prediction)
K2ASP: March 15, 2004
AA2QA: April 1, 2004
N2EY: April 15, 2004
N3KIP: May 1, 2004 (first prediction)
KC8PMX: July 1, 2004
WA2ISE: August 1, 2004
K3LT: September 15, 2004
WK3C: December 30, 2004
N4PGW: May 22, 2005
N8UZE: July 1, 2005 (first prediction)
N3KIP: December 31, 2005 (second prediction)
N8UZE: January 31, 2006 (second prediction)
N2EY: March 1, 2006 (second prediction)
KB9RQZ: April 1, 2006
K2UNK: July 1, 2006 (second prediction)
AB2RC: July 1, 2007
KB3EIA: July 5, 2007
W5TIT: June 1, 2008
WA2SI: Complete elimination not within the foreseeable future (second
prediction)

Anybody already on the list want to add a prediction? If so, the
"rolling rule" (thanks Dee, N8UZE) applies:

If your prediction on this list is a year or more in the past, you can
add a new one.

At this point everyone before and including N8UZE can add a new
prediction.

All predictions stay on the list.

N2EY:

I predict, because of this new threat which will disclose the sheer simplicity of amateur radio, the old hams will rally-up with a burst of new energy and surprise us all....

I think a new (re-discovered really) technology will be developed by the hams, in a joint effort of all classes, to develop and perfect the arcane lost knowledge of reincarnation.

Dead hams will arise from their graves, grab keys and re-new old expired sk licenses.

Element 1 shall never pass from this earth!

John

They would have to upgrade to get HF privileges. Unless of course they take
the code in the near future and become Techs with code and thus gain the
```

Tech Plus privileges. I've read it a couple of more times and it seems to say that no one gets any changes in privileges. No code Techs will continue to be VHF only unless they upgrade to General. Techs with code will continue with their current VHF + very limited HF unless they upgrade to General. Any one wanting more privileges than they currently have will be required to upgrade. Basically the FCC has chosen to fully support those who wanted no automatic upgrades.

> I agree with you--lots of folks in for a shock. I am now intrigued enough
> to look through there and see what it says.
>

I'd suggest reading it several times. As I said it's a lot to digest at once and it's not as clearly written as one would hope. However, I found it was much clearer on the second and third readings.

> My initial thoughts are that, to do so, would seem to open up a whole can

> That is, if I understand the "way it works." LOL
>

Yes, under they system now in place, you would have to produce your Tech Plus license to upgrade. Other proof is an old Novice license even if expired. Everyone else would have to produce a CSCE not more than 365 days old.

Under the new system, one would not have to have anything other than credit for Element 2 (the Tech written), i.e. a Technician license of any type.

> So, there'd be more affected than just the No-Code techs, I think. For

>
> Kim W5TIT
>

You will still have your current Tech Plus privileges if and when the NPRM goes through. Just keep a copy of your license that says Tech Plus when you renew. The FCC database will show your "Previous Class" as Tech Plus so that should be sufficient should there be an issue. Other things you can do are get copies of old callbook pages or even records from the FCC archives. The FCC does charge a fee for the latter but it can be worth it.

Again, it looks like the NPRM was crafted in such a manner that no one loses any privileges that they now have and that they will not gain any privileges that they don't already have unless they take the appropriate test. It looks like the FCC took great care in this regard as there is lingering "ill will" about lost privileges from various earlier changes and a lot of

negative comments in this go round about "automatic upgrades".

NCI Executive Director Carl Stevenson is on record as an enthusiastic supporter of free passes for all Novices and Tech to General, and all Advanced to Extra without further testing. As I recall, NCI submitted official comments of this nature to the FCC. Sure smacks of "relaxation of test requirement for written" to me.

Bill,

Just to make sure I had not mis-characterized the NCI position, I checked their comments to RM-10867, on file at FCC's web site. My recollection was accurate, in that it expressed unconditional support of the proposal for free upgrades.

In my veiw such granting of instant upgrades from Technician to General for almost a third-of-a-million licensees would make a mockery of the written examinations..

Today the General exam requires passing two 35-question written examinations, and the Technician requires passing only the simpler of those two exams.

The ARRL petition would essentially grant a one-time waiver of the second (harder) of the examinations, in effect holding a one-day sale of "half-price" General licenses to these 330,000 licensees. This is not some trivial "one-time adjustment" --- in fact if it were adopted, the vast majority of the General licensees would never have successfully passed the test required for that license class!

In the world of "unintended consequence" the effect of this give-away would be that the commission would have ipso-facto established that today's Technician examination is perfectly adequate for a General class license, and the credibility of the qualification structure in the Amateur Radio Service would be destroyed (especially since these "new" Generals would presumably now receive credit for the "General" written element when they proceed to upgrade to Extra).

That's how it works now, Kim. But that piece of paper could be
an old license that says "Technician Plus", or a page from an
old Callbook, etc. Or a listing from the FCC database showing your
former license class as "Technician Plus".

> So, there'd be more affected than just the No-Code techs, I
> think. For
> instance, I couldn't begin to even find my endorsement and I am > not sure
> I'll ever be able to. That would mean, essentially, I am a

Since the changes of April 2000, FCC has left it up to the Technician
licensee (!) to retain documentation that they
are/were Tech Pluses.

It would be the height of irony if, in fact, the FCC dropped
Element 1 yet kept non-code-tested Techs off of HF until
they got Generals or Extras.

Of course the "simple" solution is to upgrade to General or Extra.

in your view ok doesn't make it so

In mine for example giving the upgrade esp to those who have held the
leicense while it produces a retification of past in justices but the
FCC disagreed which isn't going to bother NCI or NCI members

Which is exactly what the NPRM says now that I've read it several times.
Each "flavor" of Technician maintains its current privileges. To gain
additional privileges will require taking the appropriate written test.
They remark that upgrading will require taking only the "simple" General
written exam.

In other words anyone who wants more privileges than they currently have
will have to take a test.

>
> Of course the "simple" solution is to upgrade to General or Extra.
>

And as I read the comments in the NPRM, that is exactly what they want licensees to do rather than give them any freebies at their current grade. In other words they do not want people to be content with an entry level license.

There is the problem, "gentlemen's agreement", but John is no gentleman,
kinda like on the Childrens Band where he fits in real well.

Furnish me with a URL to a document by usenet on the false specs you are attempting to pass off on the un-witting hams, and others, here. Where is a usenet "Official Faq" stating what you are claiming?

No, it is you "control freaking" and thinking someone will pay attention... now you will probably wonder why people will ignore your other "facts." Perhaps you are confused?

Like I say, if I even posted a uuencoded binary here, how many could even deal with it and end up with an app they could use or a pic they could view, most likely NONE!

KXHB:

I sympathize...

That is too drastic a change.

Most here probably remember the big stock market crash and the depression of the 30's (I wasn't born yet--two decades later.) People jumped out of windows and committed suicide in terrible ways--just imagine all the hams doing this--would be anti-productive--end up with fewer licensees as a result of such action by the FCC!

"cahngubg" THAT story? I've never claimed to be on disability, nor
id I was would I brag about it.

> > First you alledge that I am receivng public funds for "disability"
> > allegedging some impropriety.
>
> yes based on your statements in the past and present

Based upon WHAT statements "in the past and present"...???

I've NEVER stated that I am on disability.

> your quote supports the impropriety, as in being able to work 40 hours
> you clearly should not eleigble

Supports WHAT impropriety?

I am working, ergo do NOT claim ANY "disability".

So from WHAT source did you glean this information?

> I have no reason beyond your word that you are not double dipping, as a
> point of fact I believe you are...(SNIP)

First of all, you obviously don't know what "double dipping" is.

(You screwed up "drafted", so why should I be surprised?)

"Double dipping", as it applies in COMMON vernacular, is a federal
retiree who completed one career-length period of employment,
"retired", then completes a second career-length period of employment,
thereby securing a second "retirement".

> I have not been bringing it up since
> then since I don't think it that important, but since you insist I
> think you are stealing for the govt monies you are not entitled to

Then you've demonstrated what a COMPLETE idiot you are by making
such a statement without an iota of evidence.

> That isn't libel BTW since I clearly state it is my opinion

yes it is, since you allege the perpetration of a felony without
evidence, opinion or not.

> > Then you claim I am "claiming glory" for a QSO I didn't make when
> > I clearly stated that I never made the contact from the git-go.

> > contrary...???
>
> You have presented NO eveidence to the contrary, none at all, Indeed I
> don't think you or anyone could present any eveidence in this forum

You're welcome to search my name and DOB on public files in the
State of Tennessee, Markie. The only "hit" you'll find are my driver's
license and Nursing license.

> I got the idea form your post of some 6 years ago, and emails you sent
> in the same time frame

I have never claimed drawing any disability pay,
Markie...ESPEICALLY in any alleged (ie: never happened) "e-mails".

Once again, you substantiate my claims of your lack of situational awareness and attention to detail.

> It is no lie when I state that I believe you are comitting fraud of
> some Govt agency.

And it is no lie on MY part when I state that I believe you need to be under the supervision of mental health case workers, or at the very least a reputable vice cop.

> wether you are or not is another matter but that I have formed that
> opinion is a fact

You've broken new ground here, Markie. Looks like it't time to have a chat with the folks at Houghton County SO. Someone up there needs to know about you.

BTW...How did you manage to screw up your address change with the FCC so badly? Geeze, Markie, how many time do you think it's necessary to note "PO" box in the address line???

Idiot.

Steve, K4YZ

I think ulcers might have been the least of his worries. I hope his
liver had a sense of humor. The guy would often mention that he'd given
up drinking several years earlier.

Whelp, here again we have a lay person making a diagnosis.

Where's your medical license, DreckieBoy?

> > Clear sign that I have things that mean a lot to me, Amateur Radio
> > being one of them.
>
> clearly mental that you view a dissgreement over the ARS as an attack
> on yourself

When that comment clearly is disparging upon Amateurs as a whole,
yes.

> clearly mental that you view a disagreement over the ARS as an attack
> on it

What was that supposed to say in English?

> > <Markie Censored Sentence Replaced.>
> >
> > > You make disparaging, untrue statements about Amateur Radio and expect > it to be
blown off.
> > >
> > > Sorry.

> folks have a different philosical point of view

Please provide reference to your mental health credentials.

And please tell us alllllllllllllllll about your "philosophical"
credentials while you're at it...Which school of philosophy did you
attend?

> I will use coments from recent ARES posts as an example

OK...Where are they?

You didn't cite a single ARES, ARRL, OR FCC comment anywhere in
this post, Markie...

> I say the PR around ARES is overblown, that does not mean I am
> attacking ARES as useless, merely that it's PR is over blown, and with
> good reason by the ARRL the FCC and the served agencies, that merely a
> less stiring endorsement of ARES than you seem to want

The "stiring" endorsements were NOT from the ARRL or FCC. They
were from the served agencies.

Who knows better than the agency served what the quality and
character of the service they received was, Mrkie?

Are you suggesting that you, Lennie, Toiddie or Brain are more
qualified to state what the character of any service rendered to any
agency on any particular date or event is...?!?!

If so, do any of these agency's have a Letter or Memorandum of
Understanding with the four of you that delegates their public
relations duties to you for future comments?

> Myself, BB, and Lenn have different levels of opinion on the roles of
> ARES and the nature of the PR yet you lump us all together as attacking
> ARES

But you do. If you, Brainless and Lennie DO 'attack' the ARES,
then >>I<< am not the one "lump(ing you) all together"...that's you
jumping right on in...

> it is not "inappropriate innuendo" to try and get around this spin to
> look for the turth, but to you no one may challenge the spin, and there
> is ALWAYS spin in America today

What spin?

Just because YOU lie about almost everything you talk about does
NOT mean that everyone else does.

> > > You clearly need to get a life
> >

There are no "gratuitous insults" there.

There's no "personal attack" to lay off of, Markie, unless you
were refering to YOUR comment "...It is also a clear sign of your
disconet with reality..."

You mean THAT personal attack..?!?! One that would suggest that
you are a licensed health care professional making a diagnosis?

Sheesh.

Mark, let us be clear. There were *no* answers. You didn't answer questions about the words or what meaning they were supposed to have.

If you write gibberish and then refuse to explain it, you can't claim abuse (though I get the idea that a fellow such as yourself, a guy with masochistic leanings, might enjoy that).

Source record: 113930

QUOTE FROM YAHOO! NEWS

FORT PIERRE, S.D. - Johnny Smith has a new digital cell phone, but he relies on an older analog bag phone when he travels the wide open spaces in the western part of the state to line up cattle for sale at a local livestock auction.

In rural areas where cellular towers are far apart, analog phones often work when digital models can't get a signal. With the Federal Communications Commission pushing the move to all-digital phone service across the country, Smith and others in rural areas are urging the agency to wait until more towers are built to improve service.

"I carry a bag phone just because I can get so much better reception with it," Smith said. "If you're out in the middle of no place, it's nice to be able to call somebody."

END QUOTE

(Let's see how long it takes Lennie & Co to make this a "code test" or "Mighty Morsemen" thread....)

nO I did not ignore it I dismissed it since as yuo should know on
USEnet if you post message A then B then C I may se them as C then A
then B

Therefore there is no logical sense in expecting that I will read and
respond to your posts in the order you wrote them

The topic, blockhead, is what the SUBJECT line was.

As for what it is or is not, well, that was dues to YOU changing
it.

> cutting all non ham content

The implementation of digital over analog >>IS<< a policy debate,
pumpkinhead. (The Idiot's Defense League won't let me call you an idiot
anymore, so I'll expand the list of options.)

So what you're telling me is that you're aware you have a problem,
and that despite being aware of that problem, you have neither the
capacity nor incentive to fix the problem.

You see, I buy the "I can't read clearly due to dyslexia"
issue...What I DON'T buy is your using it as a crutch to further
facilitate your laziness and incompetent mind.

> Therefore there is no logical sense in expecting that I will read and
> respond to your posts in the order you wrote them

You don't seem to have that probelm with other posters,
Markie...Which only further leads me to believe that you're simply
lying to cover up your incompetence.

Nope. No more than you doing the same thing.

Stop lying. Act like a man. Get help for your problems.

(I'll hit the lottery before any of THAT happens......)

> attend?

I don't give out anything you could use to trace me But I attended many
classes in Philosophy as did most real undergrads, and unlike many of
them I did in fact absorb something

You are the one so obsessed with paper, not I

>
> > I will use coments from recent ARES posts as an example

and the reference to those served agencies was present in my comments

>
> Who knows better than the agency served what the quality and
> character of the service they received was, Mrkie?

any objective observer does

You are opperating on the assumtion that they are being truthful, where
I never trust much of what anybody says

>From their coments one can infer that the served agencies receievd
something of value to them, and that they wish to continue doing so,
nothing more can be counted on

>
> Are you suggesting that you, Lennie, Toiddie or Brain are more
> qualified to state what the character of any service rendered to any
> agency on any particular date or event is...?!?!

not at all merely that we are able to releize that they are buttering
us up in order to see that we show up the next time too

No one likes to look critcaly at what may not have worked well

Indeed your reaction to the suggestion that the served agnecies may not
be as pleased with us as they say show they have a good reason NOT to
be at all critcal of the quality of the help they get

cutting a snide and completely irelavant coment

> > Myself, BB, and Lenn have different levels of opinion on the roles of
> > ARES and the nature of the PR yet you lump us all together as attacking
> > ARES
>
> But you do. If you, Brainless and Lennie DO 'attack' the ARES,
> then >>I<< am not the one "lump(ing you) all together"...that's you
> jumping right on in...

I have never attacked ARES, not once. I have always adknowled their
positive role, just disagreed that it is as big as the PR states. I
have not observed Brain doing so either. Lenn has been careless enough
in his bombast to attack the management of ARES and the PR around it
but doesn't address one way or the other wether ARES helps anyone, but
Lenn is of course in the porrest postition of the 3 of us to judge that
>
> > it is not "inappropriate innuendo" to try and get around this spin to

> > is ALWAYS spin in America today
>
> What spin?

that the claimed made for ARES are inflated of course they are it is
only human nature

>
> Just because YOU lie about almost everything you talk about does
> NOT mean that everyone else does.

all politicains lies the head of of the Red Cross et al are esscaily
politicains Look at Libby Dole for example President of the red cross
then would be president of the US

that you are too brainless to reconize the degree to which deceit is
part of Us life esp US public life

>
> > > > You clearly need to get a life

> > works well, not so well, not at all calmly and reasonably
>
> I agree.
>
> But we also DON'T need liars and deceivers involved in the
> discussion.

but we do, we most esp need such people involved how else are we to
understand how to deal the political world

Just look at the code test issue and the results of your labour, By
choosing the right methods and appealing to what the FCC needs, and/or
threatening them where they don't care to fight we have won, while just
2 weeks before an ARRL rep was telling our club how certain the ARRL
was that no NPRM would come out this year and likely not the next

>

> id I was would I brag about it.

yes you did you were not braging of it but lameting it some 6 years ago
you were using it to counter the argument you should not be picking on
me becuase of my disability

>
> > > First you alledge that I am receivng public funds for "disability"
> > > allegedging some impropriety.
> >
> > yes based on your statements in the past and present
>
> Based upon WHAT statements "in the past and present"...??

asked and answered

>
> I've NEVER stated that I am on disability.

you were never that clear but you danced around around it enough to
convince me of it

>
> > your quote supports the impropriety, as in being able to work 40 hours
> > you clearly should not eleigble
>
> Supports WHAT impropriety?

being on disablity and clearly being able to work is improper

>
> I am working, ergo do NOT claim ANY "disability".

one I have only your word you are working, and your word means nothing
to me

two, working does not preclude you from appling for and reciving
disablity or other public aid, only makes improper and/or illegal to do
so

>
> So from WHAT source did you glean this information?

your words of some years ago, you cureent behavior, your clear mental
problems

>
> > I have no reason beyond your word that you are not double dipping, as a
> > point of fact I believe you are...(SNIP)
>
> First of all, you obviously don't know what "double dipping" is.

No I simply don't apply the word as narrowly as you do, as can be
expected since I am less narrow minded than you

more of Stevie trying to pretend he is a binding authority on english
cut

why do you bother with that stevie, I don't accept your "authority"
surely even you are bright enough to notice

>
> > I have not been bringing it up since
> > then since I don't think it that important, but since you insist I
> > think you are stealing for the govt monies you are not entitled to
>

>
> You're welcome to search my name and DOB on public files in the
> State of Tennessee, Markie. The only "hit" you'll find are my driver's
> license and Nursing license.

anytime you want to present some evidence you go ahead, but again I
have formed my opinion, you wish to prove something you prove it, carry
your own freight you lazy bum

It is statements like the one you just made that help convince me that
you are in fact cheating the system somehow

Even if I preformed the search you sugest it would prove nothing You
could be using a fake name and other id to acomplise this feat Indeed
as I said at some point you can't prove your inocence, it is quite
impossible
>
> > I got the idea form your post of some 6 years ago, and emails you sent
> > in the same time frame

>
> I have never claimed drawing any disability pay,
> Markie...ESPEICALLY in any alleged (ie: never happened) "e-mails".

you sent bunches of them harrasing me pleading with me demanding I take
various action trying to black mail with the material you had found out
about my sexual orientation

again the precision with which you making your claim suggest that I
quite close to the truth. that you care so much about what someone who
you claim is of so little import has to say on the subject,

as the old saying goes, "Methinks thou doest protest too much"
>
> Once again, you substantiate my claims of your lack of situational
> awareness and attention to detail.

i do nothing of the sort you are merely trying , desperately to cloud
an issue on which you are very likely vulernable

>
> > It is no lie when I state that I believe you are comitting fraud of

>
> And it is no lie on MY part when I state that I believe you need
> to be under the supervision of mental health case workers, or at the
> very least a reputable vice cop.

I accept that is a true statement

However it also shows your lack of mental balance

nothing you accuse me off merits any attention form a Vice cop and I
suffer from no mental illness as determined by licensed pros

>
> > wether you are or not is another matter but that I have formed that
> > opinion is a fact
>
> You've broken new ground here, Markie. Looks like it't time to
> have a chat with the folks at Houghton County SO. Someone up there
> needs to know about you.

not at all, no new ground at all, not even your threats are new I have
stated my opinions on you quite clearly in the past

>
> BTW...How did you manage to screw up your address change with the

your misdeeds are almost beyond counting

You lie
you cheat
you comit public fraud
you stalk
you harrass
you threaten
you libel
you forge

more steve lying to evade his respoinilty for his own words

Any literate person can read it. Making sense out of it is
another matter.

> If you dispense with spelling, capitalization and punctuation, > why post at all?

Here's a theory, Dave: It's done to antagonize the reader. As a
way for the writer to insult the reader, by saying the reader
is unworthy of the effort required to write understandably.

> Who wants to read the ramblings of an illiterate?

The point is that you and others bother to read the gibberish
and comment on it at length.

Uh, yep. Dave writes the questions "who wants to read..." and yet, it's apparent he's done so--at length--and responded to it as well. Although, I've never seen Dave participate in any kind of post other than to be contentious or attempt to flare some kind of superior attitude. Maybe I've not taken notice, but I don't remember ever seeing a post from Dave that is remotely technical in nature, or that isn't a cheap route to taking pot shots at those he has issues with.

That's OK, though, maybe the newsgroup is sport for him... I like the contention myself. I'd much rather debate with some spunk, but arguing and slinging mud suits me well when I'm in the mood... ;)

Oh, I don't think you have to prove anything to me...

But if it were ME making all these easily disproven asserions in
public, I'd want to get my side out in front so all could know "where I
was coming from"...

So far all we have are your assertions and your damnations for
anyone insisting that you substantiate them.

> > > (UNSNIP)...and I do have opinions about amateur radio issues.
> >
> > None of those substantiated by reality either.
>
> Faulty thinking on your part, again.

Nope.

Fact.

None of your assertions, ie: unlicensed devices, ARES, etc aren't
even remotely factual, unless requalified with language such as "in my
opinion..."

> > > You like none of it and so launch your personal attacks.

>
> Faulty thinking on your part, again.

Nope.

You make untrue disparging remarks that you expect others to
blindly accept or blow off.

I do neither.

That YOU would expect it to be so is the "faulty thinking".

Not as stupid as you.

USE a period. Use capitalization. Use punctuation.

> > USE CAPITALIZATION!
>
> doesn't help with you

It's not about helping me, Blockhead...It's about helping YOU!

> > USE PUNCTUATION!
>
> does not help with you

It's not about helping me, Blockhead...It's about helping YOU!

> you don't understand english

Sure I do, starting with the fact that it's proper to start a
sentence with a capital letter and end it with a period. It's also
proper to capitalize "English".

You insist you know it so well but you never demonstrate it.

> > > > What you're writing is "English" only by loose association.

You just uttered eight libellous statements, Markie.

And then followed it up with yet another of your jibberish
statements.

Each one made as a statement of fact when there is in deed no basis
of fact to any of them. Unlike your earlier post where you had the
momentary lucidity to say "in my opinion,

However even such a caveat does not protect you from civil suit.

Even in Michigan.

No, that's the title of the newsgroup...Not the "topic".

However the implementation of digital technology IS a policy issue
in ALL radio services with there being some reasonable doubt as to the
efficacy of digital.

> > As for what it is or is not, well, that was dues to YOU changing
> > it.
>
> nope I ever changed the title of the newsgroup

You changed the title of the thread.

The thread is about digital technology.

YOU changed it to "more stevie wandering" which has absolutely NO
radio-related reference at all.

So who's instigating the "personal attack" now, Markie?

> > > cutting all non ham content

Sure it is.

There's debate about the efficacy of digital over analog.

Here's a perfect example of analog being superior to digital.

> Dafur is policy debate too as is Iraq but they have no place here
> either

However digital communications techniques are.

Please provide the newsgroup your Letter of Appointment that
assigns you as "Apppointer Of Appropriatness for NG Discussions"

I think that the biggest reason that they work better is not an
inherent digital problem, but that the old analog phones tend to have a
lot more power. IIRC some of the bag phones were pumping out 5 watts,
some may have been more.

Today's cell phones have been reduced in power quite a bit.

I would be remiss if I didn't note that I do agree with you that
digital is not better. While it performs well under many circumstances,
it has it's own set of shortcomings.

Certainly digital voice is of no particular advantage in Amateur Radio,
from what I have seen so far.

Digital voice is an acceptable ham radio topic, Mark. We may use it some day. And in it's present form, it isn't terribly applicable to Ham radio. The present systems available for us to use do sound very nice, giving "FM-like quality" (note that means quality akin to 2 meter FM, not Broadcast radio) with no noise. That part is good. But there are some nasty flaws, such as having to essentially have a "sked" in order to use it. If you don't catch the transmission from the beginning, you don't catch the transmission. There are no particular BW advantages either.

Comparisons with the outside world and what they do and use are instructive, and in the end, on-topic.

> they got Generals or Extras.

But isn't that exactly what is proposed. Once it becomes the
new regulations (i.e. no code test anymore at all) there really
is no way for a code-less Tech to then become a Tech
with coode since there won't be anymore code tests being

administered.

> Of course the "simple" solution is to upgrade to General or Extra.

And since a CSCE is good for a year, many code-less techs
might want to consider getty element 3 so when the new
regs become the rules, they can just go for a paper upgrade
on the day the rules become effective. Lots of Techs and
advanced licensees did that in early 2000 once the new rules
were set to go into place in April of that year.

A former employee of mine (now retired) lost an arm in Vietnam, and receives compensation for his disability. He built a fine career as an electronics design engineer. What is improper or illegal about that? You owe a lot of disabled veterans a huge apology for suggesting that succeeding in life is "improper and/or illegal".

One reason, the newer digital phone probably puts out 1/10 of the power of the analog. Increase the power of the digital and the problem will most likely disappear...

Under this NCI-endorsed plan, 345,802 current hams (using Jim's July 15th census) would receive a PERMANENT relaxation of the requirement to test for General and another 75,730 would receive a PERMANENT relaxation of the requirement to test for Extra. That's means that 421,532 individuals, or 63.4% of the existing hams, would suddenly hold licenses for which they had not passed the current written examination. Trying to trivialize that as a simple "one-time" adjustment is intellectually dishonest and a cop-out. By any reasonable measure, NCI and ARRL both officially are on record as supporting a lowering of the qualification requirement for General and Extra.

you disort my mean sir and you have removed the stement from context

Stevie claims that him working proves he is not receiveing disabilty

stevie also claims that he is not disabled

therefore if stevie is to be believed then it is improper for STEVIE"
to receive benifits

you took a very spesific case and tried to broaden it

Improperly I might add

as you did with NCI's postition on the One time upgrades

by no reasonable measure

In any change in the system there is the clear poetencail for large
scale adjustment of the licensesure of those involved

something that is clearly different from changing the number of tests
or their level of diffultity

you are just trying to pick a fight it seems

I intend personaly to so once the R&O is issued since the FCC may try
and drag its feet, (and if so I expect NCI will try anf hold thier toes
to te fire) or till my wife decides to take her tech test herself so as
to have some reason myself to be there

False! Absolutely false!

At this URL ---> http://tinyurl.com/wce9 there is a proposed change which
migrates from the current license structure to a simplified 2-class structure
with NO free upgrades and with NO loss of privilege for any existing licensee.

Jim I have been coutesous to on this but you are straining my ability
to do so

How can you use CW a medium completely without error correction and be
unable to work the meaning of simple text with the leasure of time and
the abilty to look at the context

People can follow my typing the first draft with no polishing turned
into CW on air and yet you claim you can't follow it in text

How is that possible?

Do you have an exaplintion why The level of difficulties for people in
reading my stuff here in this newsgroup declines as support for code
testing increases, indeedanywhere I post it seem that the abilty to
read and understands declines with the degree of their agreement

I frankly suspect that what the problem is, is simply that people like
Dave and it seems you don't want to understand and therefore seize on
any excuse not to do so

>

which has nothing to do with the point any change has the potentail
even your "proposal" has the potentail for large changes since their is
of course no assuance that it would be adpoted as is

Any time the Govt decides to changes regs there exists a protentail for
upheaval

indeed your proposal is an a large scale upheaval in just going to 2
clases instead of the 6 we still have on the books

your proposal is a large scale adjudgement

2620. PGP encryption of data on amateur radio?

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-28 16:45:21 UTC
From: John Smith <assemblywizard@gmail.com>
Message-ID: <EY7Ge.227$361.4865160@news.sisna.com>
Source record: 113980

Anyone aware of any court challenges to the FCC banning the use of "codes" (encryption/decryption) on radio.

It seems insane that encrypted data is exchanged freely on the internet and yet regulations prevent its use on amateur radio, how such can be prevented on one specific form of communications seems insane.

Very sophisticated means are even used to embed text/voice data in video and binary pictures which is virtually impossible to detect/decrypt with the even the fastest computers--within practical time periods (like millions of years--let alone lifetimes.)

ahem and the bible has exactly what relavance to the Ham radio

Did abram use morse code to reach god (after all it is supposed to get
threough when nothing else will)

or did clever jacob invent AM

you loyd are a fool

"Hell Fire?"

Isn't that a name for a specific missile in the Air Force arsenal?

You got some of those?

ROFLOL!!!!!!!!!!

Have you ever seen a "gentleman ham" recently?

Something happened to all the old guys who welcomed new members into their ranks?

Held instruction/tutorials at their homes and public forums.

Instructed rather than wished to control others...

It is a real shame, but the caliber of amateurs is equal or below the chicken banders in this brave new world...

That's true on the surface. But it belies the claim of some who said they would *NEVER* support a reduction in the written test requirements.

Never is a very long time!

In some ways a one-time reduction is worse than a "permanent" reduction. In a "permanent" reduction, the message is that the older, higher requirements have been removed because they aren't necessary.

For example, in 2000 FCC changed the written testing for Technician from two exams (old Elements 2 and 3A) to a single exam of about half as many questions. That action meant FCC was satisfied that anyone who passed new Element 2 from then on out was adequately qualified to be a Technician class licensee.

But if they had made a one-time reduction, they would be saying that those who benefited by the reduction were somehow "special" in that did not need to meet the requirements that were in effect both before and after the one-time reduction.

Some might argue that "experience" or "time in grade" should count for something. Maybe so - but if that's the case, why not have a permanent automatic upgrade system based on time licensed? For example, your license could be automatically upgraded one class every time you renew, if you have a clear record. If having a Novice for 5 years qualifies someone to be a General, or having an Advanced for 5 years qualifies someone to be an Extra, who could argue about 10 years? (It's been 5 years since the last Advanceds and Novices were issued.)

There's also the case of the "last one aboard". Suppose FCC did announce free upgrades to General for all Novice/Tech/TechPlus hams. The announcement would of necessity precede the implementation by a few weeks or months, during which time anyone in those classes planning to upgrade could just wait and get the upgrade for free. And anyone planning to become a ham could just get a Tech and wait for the free upgrade to General.

It would be an anti-incentive plan! Why study if the upgrade is
free?
>
> Under this NCI-endorsed plan, 345,802 current hams (using Jim's July 15th
> census) would receive a PERMANENT relaxation of the requirement to test for

> requirement to test for Extra. That's means that 421,532 individuals, or 63.4%
> of the existing hams, would suddenly hold licenses for which they had not passed
> the current written examination.

Yup.

And the situation is more complex - suppose someone whose license is
expired but in the grace period renews - what license class do they
get? Maybe the offer of free
upgrades would get some of them to renew?

> Trying to trivialize that as a simple
> "one-time" adjustment is intellectually dishonest and a cop-out.

The worst parts of it are two:

1) In the case of General, those who had not passed the required tests
would outnumber those who had - by a 3 to 1 ratio! Extra would be a
little better, but about 40% of those who folks would not have
passed the test.

2) Those who come to ham radio after the Great Giveaway could
legitimately
claim that the written for Tech should be adequate for General, etc.

> By any
> reasonable measure, NCI and ARRL both officially are on record as supporting a
> lowering of the qualification requirement for General and Extra.

Worse - permanent reduction. Here's why:

Suppose FCC did announce that they were doing free upgrades effective,
say, October 1, 2005.

Joe Newham goes to a VE session in late September and passes the Tech
written.
A few days later, even before he sees his new call in the database, he
gets a free upgrade to General.

That free upgrade would mean FCC considered the Tech test adequate for
General privileges. And when Mary Newerham shows up in November 2005,
why should she
have to pass the General written? After all, the Tech written was
adequate for
Joe Newham a few weeks earlier....

The joker in the deck is that such free upgrades would mean a lot of
admin work
for FCC. That alone may exclude them from consideration.

Of course, we probably don't want the new digital phones to be running
at the power levels the old bag phones run. Especially for the lenght of
time that people hold the things to their head nowadays.

Frankly, I view one time adjustments in about the same vein as I do
temporary taxes.

Imagine the howls when Operator #1 tests the day before the One time
free upgrade, and operator #2 tests the day after, and gets much less
privileges.

Is that fair? If they both pass the same test, why is one getting
preferential treatment?

All it does is substitutes another problem for the perceived first problem.

Hans, intellectually dishonest is an understatement! It works on so few
levels. I'll be howling on both sides. People should *not* get free
upgrades, and they should *not* be punished for the date on which they
took the test.

Perhaps they could reduce administrative burden, and do all manner of
other wonderful things by simply having a one time adjustment of
everyone to Extra?

I have heard of this never studied it could something like that be used
to embed same in something like SSTV
>
> John

OTOH Your mention PGP I suppose based on the discusions of the USE of
PSK 31 and other modes you could argue the use PGP would be legal is
the non encoded parts of the tranmision in addition to your Call sign
contained the addresses where both of the keys could be found. The
addresses would have to be acesable over say the internet but it should
be legal

Alothough the FCC is liable to try to make a fight of it, one that
isn't worth it to me at anyrate

N2EY:

How about the FCC and arrl just pose the question, "What are relevant questions to be posed to prepare potential new licensees for the hobby?"

Logic will take over, problem disappears... however, this is a clear and present danger to "control freaks" and bureaucrats who view potential licensees as "radio terrorists"...

That's true on the surface. But it belies the claim of some who said they would *NEVER* support a reduction in the written test requirements.

Never is a very long time!

In some ways a one-time reduction is worse than a "permanent" reduction. In a "permanent" reduction, the message is that the older, higher requirements have been removed because they aren't necessary.

For example, in 2000 FCC changed the written testing for Technician from two exams (old Elements 2 and 3A) to a single exam of about half as many questions. That action meant FCC was satisfied that anyone who passed new Element 2 from then on out was adequately qualified to be a Technician class licensee.

But if they had made a one-time reduction, they would be saying that those who benefited by the reduction were somehow "special" in that did not need to meet the requirements that were in effect both before and after the one-time reduction.

Some might argue that "experience" or "time in grade" should count for something. Maybe so - but if that's the case, why not have a permanent automatic upgrade system based on time licensed? For example, your license could be automatically

upgraded one class every time you renew, if you have a clear
record. If having a Novice for 5 years qualifies someone to
be a General, or having an Advanced for 5 years qualifies
someone to be an Extra, who could argue about 10 years? (It's
been 5 years since the last Advanceds and Novices were issued.)

There's also the case of the "last one aboard". Suppose FCC
did announce free upgrades to General for all Novice/Tech/TechPlus
hams. The announcement would of necessity precede the implementation
by a few weeks or months, during which time anyone in those classes
planning to upgrade could just wait and get the upgrade for free.
And anyone planning to become a ham could just get a Tech and wait
for the free upgrade to General.

It would be an anti-incentive plan! Why study if the upgrade is
free?

I am afraid all you are seeing is that CB accurately reflects the condition of "the world."

The "F word" is considered proper etiquette onboard campus... Indeed, even professors have been know to utter it...

Society is not controlled though regulation of radio...

I think the suggestion has merit and merit discussion

I also think either a mostly fee based system(with the fees tied to
enforcement) or some hybrid merits discusion and prehaps something out
of it merits adoption, But I'll to speak speak for Bill (in terms he
and carl can deny if they choose) NCI has never been able to even
suggest such discusion without being attacked by the ProCode crowd

And some of us that think that a little "larnin'" is a good thing,
think that the whole concept is cheating those who get the free upgrade.

Sometimes I think I'm the only one who thinks that way..... 8^(

I believe in a time in grade before moving up to say Extra. I think it
should mean something, and nothing is something like a little experience
(especially practical) Say a two year wait before testing for Extra.
There is of course the possibility that a person could go through this
process without ever getting on the air. But more often than not, an
inactive Ham will not likely bother to upgrade anyhow.

Yup. And the people who came after them would be cheated after a fashion.

Lessee - this was a "one time" thing? This one time adjustment would
permanently alter Ham radio, with the majority of hams not tested in a
manner that was approved at some point. The free upgrade hams are
considered adequately tested are they not? THen the Hams who come after
are also adequately tested. Therefore to *not* allow them the same
privileges is pointlessly and clearly punitive and discriminatory.

> 2) Those who come to ham radio after the Great Giveaway could
> legitimately
> claim that the written for Tech should be adequate for General, etc.

Absolutely. I suspect that I would be howling.

So soon enough, and after much turmoil, the dust settles, and the
changes are made permanent.

I cannot envision any way that NCI would support "toughening" the
requirements in the post adjustment world.

NCI, welcome to the law of unintended consequences. I do hold them
responsible.

I am still pissed they remove the question, "What purpose does the feedback winding on coil serve in a regenerative receiver?"

Or, what is the purpose of a coherer?

Or, how is galena detector adjusted?

Or, what do you need to construct a carbon microphone?

etc, etc...

Yep, they just can't ask questions like they use to!

Are you joking man?

Why would terrorists use radio, even with the narrowest directive antennas and broadcast to who-knows-who?

The FCC thinks them too ignorant to figure out the internet is a much better vector?

I suspect there is much more on Al Jazerras' website than meets the eye... but, who knows?

Is it? After all the FCC can't seem to find the folks breaking the
rules now

and doing something that looks stupid is a classic in threat analisys
work

Good examples of it are in "the longest day" a german general was
pointing out how silly his plan for wining a wargame was Normandy bad
wether and low tide, which turned out to be what the Allies did

Using radio would be a soft target approuch

>

Ohhh, those boys in the NSA are smart alright (well, unless they got the job because they are a relative/friend of someone who is somebody) and, I am sure they have their tools, but if they even move to claim that encryption of data by methods such as PGP and its equiv--I am afraid I would have to consider the possibility they were lying...

I think you may have some trouble understanding what I said. I suspect
from what I have read from your posts that you are probably in favor of
less, not more education for holding a Ham license.

One of the unintended consequences of a giveaway is that the day after
the giveaway, getting the same priveliges is more difficult.

So what you are saying is that you support increased testing requirements?

>

Negative. They are happy to take some credit for the situation. With
credit comes responsibility.

Unless of course they are Republican. In that case they are not
responsible....

What, now you are more knowledgeable than the FCC and are over-seeing their actions, to make sure they are proper?

Buddy, look again, I think it works exactly in the reverse. You have been listening to those here too long, the ones who think that they are secret agents and that amateur radio is being attacked by "CB Terrorists."

Niether really I favor the requriements be as loose as they can and
still serve the public interests involved the ARS, note I say the
PUBLIC not the memeberships of the ARS, thus as I have said in regard
to code testing that even if it could be shown that code testing was
good for the ARS, If it were not shown to be in the public interest I
would oppose such testing

So I favour neither, more nor less education. I favor mimimal
regulation to the needs of the public, education chips fall where they
may.
>
> One of the unintended consequences of a giveaway is that the day after
> the giveaway, getting the same priveliges is more difficult.

of course it does

>
> So what you are saying is that you support increased testing requirements?

no nor lessened ones? It is not an either/or proposition. The question
is what best serves the public interest. I am for example willing to
consider a vastly reduced test regime and shift to a more fee based
license if those fees will be used for enfocement on our bands

Enforcement seem a far biiger problem to me than education or the lack
of it so in that example i support trading educatio requirements for
increased enforcement, if that is possible

If you show me that increased test benifits the PUBLIC I will support
that

what credit are they taking? They proposed something that the FCC
regcted and you want to hold them accountable for even proposing it.
that is pretty twisted

>
> Unless of course they are Republican. In that case they are not
> responsible....

this is not a partisan issue, in the 2000 campiagn cycle I had contact
and Gore and Bush people indacated they would support ending code
testing in the itu treaty lang

... is it surprising the politicians would ever argue against dropping code?

The are supposed to fill us with a sense that they are logical and reasonable people, if they pursue insane ideas of keeping antiquated technology--who in their right mind would want them in office?

Niether really I favor the requriements be as loose as they can and
still serve the public interests involved the ARS, note I say the
PUBLIC not the memeberships of the ARS, thus as I have said in regard
to code testing that even if it could be shown that code testing was
good for the ARS, If it were not shown to be in the public interest I
would oppose such testing

So I favour neither, more nor less education. I favor mimimal
regulation to the needs of the public, education chips fall where they
may.
>
> One of the unintended consequences of a giveaway is that the day after
> the giveaway, getting the same priveliges is more difficult.

of course it does

>
> So what you are saying is that you support increased testing requirements?

no nor lessened ones? It is not an either/or proposition. The question
is what best serves the public interest. I am for example willing to
consider a vastly reduced test regime and shift to a more fee based
license if those fees will be used for enfocement on our bands

Enforcement seem a far biiger problem to me than education or the lack
of it so in that example i support trading educatio requirements for
increased enforcement, if that is possible

If you show me that increased test benifits the PUBLIC I will support
that

what credit are they taking? They proposed something that the FCC
regcted and you want to hold them accountable for even proposing it.
that is pretty twisted

>
> Unless of course they are Republican. In that case they are not
> responsible....

this is not a partisan issue, in the 2000 campiagn cycle I had contact
and Gore and Bush people indacated they would support ending code
testing in the itu treaty lang

>usenet "Official Faq" stating what you are claiming?

Try any of the following:

http://groups-beta.google.com/group/news.admin.net-abuse.policy/msg/fe1d33dcfe1ff321

http://www.faqs.org/faqs/finding-groups/general/

http://en.wikipedia.org/wiki/Newsgroups

http://www.uwasa.fi/~ts/http/nobin.html

Even if you don't want to accept any of these articles as authoritative,
consider the validity of their basic arguments, which I've summarized
below:

- Many sites choose to carry only the discussion newsgroups, as the
binary newsgroups represent the overwhelming majority of Usenet
traffic volume (by an astonishing ratio of 300:1 as of 2002, according
to the first article referenced above).

- Sites can easily limit their news traffic to the much smaller
discussion newsgroups volume if binaries are restricted by convention
to newsgroups that have "binaries" in their names.

- Even if one poster posts "just one little binary" in a discussion
newsgroup, it can add up if others join in, especially multiplied over
many newsgroups (see "Tragedy of the Commons" at:
http://en.wikipedia.org/wiki/Tragedy_of_the_commons).

- If this results in very little meaningful distinction in traffic
volume between discussion and binary newsgroups, such that sites that
carry news can no longer easily filter out the binary material, and
keep their bandwidth and storage requirements to a manageable amount,
many sites may choose to drop many discussion newsgroups, or even drop
news altogether. The latter has already happened at many sites,
including AOL, MSN, and Comcast.

- Sites with more sophisticated filtering than that provided by standard
news server software may choose to filter out all posts that have
binary content, anyway. Already, Google Groups strips out any binary

contents from their newsgroups archive, mostly to avoid becoming a de-facto free porno/pirated-warez server. Even a site like Google, with nearly unlimited communications bandwidth and storage space, is concerned about becoming a transmission vector for copyright violations, viruses, and obscene material.

- It may even be a violation of your ISP's Terms of Service (TOS) or Acceptable Usage Policy (AUP) to post binaries to a discussion newsgroup.

Paul:

google groups are simply not acceptable, wikipedia is not acceptable...

... the other two simply recommend using common sense ... DUH!!!

Sometime around the mid-late 90's myths began to float about, we live in a "echo chamber" and simply because these myths come echoing back in force is only proof that some where successful in generating belief in the myths, are in a remarkable number of people...

Attempting to limit the internet is insane... this has been and will remain a more powerful medium of exchange than many can accept, big deal...

Some dreamed of passing binaries back and forth here, worked and developed methods--for some strange reason--others came later attempting to halt it. I admit this insanity is hard to understand--I simply note it exists... I don't even care what the reason are, or the arguments of the "control freaks" consist of...

Google groups? NO ONE SHOULD EVEN BE USING GOOGLE GROUPS!!!!

> ability to do so

"Coutesous to on this"??

Did you mean "courteous to you on this"?

If so, why didn't you write it that way the first time?

Courtesy means you would at least *try* using a spellchecker,
and some capitalization, and some punctuation. But you
steadfastly refuse to do any of that.

> How can you use CW a medium completely without
> error correction and be
> unable to work the meaning of simple text
> with the leasure of time and
> the abilty to look at the context

You obviously don't understand "error correction".

The purpose of error correction is to
identify and correct errors that occur
in the transmission medium - assuming the
message is sent correctly in the first place!

What you expect is for readers of your stuff
to translate it into readable English. And if
they have difficulty, you say it's *their*
problem.

That's not how CW/Morse Code works at all.

> People can follow my typing the first
> draft with no polishing

> turned
> into CW on air and yet you claim you can't follow it in text

I don't think you've ever used CW on the air.

> How is that possible?
>
> Do you have an exaplintion why The level of

>
> close Jim it is a reflection of the author opinion of the value > of the
> medium, usenet is unworthy of the effort, but I have said that > before

"Usenet is unworthy of the effort"? That's a cop-out.

What you're really saying is that the *people who read Usenet*
aren't worthy of *your* effort.

That's what it boils down to.

> > > Who wants to read the ramblings of an illiterate?

> > The point is that you and others bother to read the gibberish
> > and comment on it at length.
>
> and that is an intersting point

So here's my final point:

The hardware and software of Usenet don't care if you post
clear prose or complete gibberish. Only the readers care.
So you are saying the readers aren't worth it.

That works both ways. Your posts aren't worth the effort
it takes to read and decipher them, let alone answer them.

So I won't.

In the discussion in the NPRM, they make it clear that they expect any Tech
not having HF privileges (i.e. codeless Techs) to take the General exam and
upgrade to get HF privileges.

Q. How many Clintonites does it take to change a light bulb?

A. None. If you think happy, happy thoughts it will respond and come on by itself. Especially if you promise it that the sun will be banned from making light since it is so much more powerful illuminator. Afterall, it's not the light bulbs fault that it burned out.

Not as cute as yours but still a little light hearted fun.

Interesting - in many ways!

For one thing, there would still be two kinds of
Technicians - those with HF and those without.

But more telling would be how many Techs would
get Generals or Extras in order to get HF.

We'd finally see how much of a "barrier" the
5 wpm code test really is/was, by how many
Techs upgrade and how many don't.

The sad part of it is that the recipe for
success is clear from the history, but
some folks don't like to look at history.

Back in 1951 the Novice license was created.
It was a limited term, easy-to-get license
that started the most new hams out on HF CW.

The Novice license ushered in an era of
tremendous growth in US ham radio. There were
perhaps 100,000 hams in 1951, and a dozen years
later there were 2-1/2 times that many - most
of whom had started out as Novices.

But all attempts to reinvent the Novice were rejected by FCC.
Some of those attempts were ill-conceived in detail, but
the basic concept is valid.

Yes there will be. The NPRM bore down heavily on the point that licensees are expected to continue to develop and learn and thus if they want more privileges, they show that development by upgrading.

> But more telling would be how many Techs would
> get Generals or Extras in order to get HF.
>

I think that will indeed be very interesting. I was plotting the data from the ah0a site out of curiosity and it is easy to see on a graph the bubble in 2000 and it is easy to see the fact that it was small and temporary. The only class that is steadily increasing significantly in numbers is the Extra.

> We'd finally see how much of a "barrier" the
> 5 wpm code test really is/was, by how many

>

My guess is that at least half the Technicians are inactive and will not upgrade. Of the remaining portion, there will probably be half that either don't hear about the change or don't hear that much about the change and so won't pursue it. There will also be a handful that aren't really interested in HF and so will not upgrade. Still if only 1/4 of the Techs upgrade in the next year, it will be quite a burden on the VEs for a while.

That was a joke, Mark. NO question that politicians on both sides of
the fence hardly know enough about ham radio to make an informed
decision about it.

Exackle. And, if the ARRL makes a thing of it on their website
(excuse me, 'thier' website), then FER SURE it happens to all!

Of course, any emergency west of the Mississippi River isn't
really any sort of emergency, ever, and nothing more should be
said about it. The only "real" emergencies are hurricanes...
which have been tracked and plotted and prognosticaated for
days...those things which can be written up ahead of time.

Tornadoes over land are only worth happening if they are EAST
of the Mississippi. Of course, those are relatively SUDDEN
in spawning and the proper heroic-action write-ups can't be
prepared in advance.

Note that these "real" emergencies all involve WIND, lots of
it.

Not to worry, "real" amateurs are there, johnny-on-the-spot,
complete with indestructable ham radio equipment and antennas
that NEVER blow down. Somewhere.

Yawn.

>management. Incidentally, this is an area where we hams have a
>distinct advantage because we can basically all talk to each other.

Whoa! I've not seen ALL the public safety dispatch centers
in the USA, just some local ones. Around here, there is NO
REAL PROBLEM in that area. There is NO need for a LOT of
this "interoperability." Police dispatchers can talk to both
fire and medical dispatchers, fire dispactchers can talk to
both police and medical dispatchers, medical dispatchers can
talk to both police and fire dispatchers. Communications
- at least in the Greater Los Angeles Area - WORKS quite good
enough and that has been demonstrated in the last dozen-plus
years here.

Radio amateurs cannot ALL "talk to each other." That exists
only as a basic concept. Few of those can "talk the talk" of
the police, fire, and medical people...no more than a police
officer can "talk medical terms/jargon" with firemen or
firemen "talk police terms/jargon" with medical folks, etc.,
etc., etc. Dispatchers CAN...especially at the "911" stations.
Those dispatchers ARE trained for that.

>2. Most Police/Fire/EMS people aren't trained specifically in
>emergency communications or the use of radios beyond what their
>everyday job requires.

Untrue around here in about a 12 million population area
taking in about 80 incorporated/unincorporated cities,
towns, and residential/industrial areas.

Are Police/Fire/EMS people operating on "scheduled" problems?
No. Each call to a scene is usually a NEW situation and none
will know (except in TV and movie shows) what to expect. One
could put down their "normal communications" protocol/format
as ALL about emergencies. It evolved to that around here.

> Yes, they mostly have ICS training and they
>mostly have taken some sort of training in how to conduct their normal
>communications, but when their systems break down or a radio doesn't
>want to work right, that's where the problem begins.

The Greater Los Angeles Area IS in constant training, review,
operating 24/7 and with a good maintenance facility at Piper
Center in L.A. The radio systems (both analog and digital)
in vehicles has also evolved to be quite trouble-free.

> The majority of
>these dedicated individuals' knowledge about their radio equipment
>boils down to this: Either it works or it doesn't.

Are you implying that radio amateurs' "knowledge" is good enough
to not only fix a faulty radio on-the-spot AND to follow-through
with "knowledge" of police/fire/medical procedures?

That's such a far reach that I HOPE you aren't implying that.

Police/fire/medical personnel ARE NOT REQUIRED TO HAVE EXPERT
KNOWLEDGE OF THEIR RADIOS! Amazing but true. If a vehicle's
radio doesn't work, relay needed communications through
ANOTHER vehicles' working radio. LAPD has digital terminals
in addition to analog voice...either can be used in place of
the other in case of unworkability for a particular vehicle.

> If it does, fine,
>if it doesn't, get another radio, or another system. Of course,
>getting another system in the middle of a major incident might prove a
>bit problematic, especially when you have fires to put out, patients
>to treat, crowds to control, or whatever other duties these folks have

>to perform - and which is where the majority of their training is
>invested, for obvious reasons.

So far, the ONLY REAL PROBLEMS encounterd in the Greater L.A.
police/fire/medical radio communications facilities have been
of a POLITICAL or "JUDGEMENT CALL" things which have NOTHING
to do with the radio systems per se.

The big test of the Greater L.A. Emergency Command Center came
on 17 Jan 94 and the Northridge Earthquake. Widespread damage
with some collapses of buildings and freeway overpasses, 53 dead
immediately, a couple gas mains ruptered and on fire, utility
poles down in the concentrated-shaking areas. TOTAL ELECTRICAL
power outage for 10 million population. That power outage did
NOT cut out anything...either emergency power in-place or battery
power in-place (all planned for ahead of time) operated and all
were kept on the air. Fire stations were joined by leased lines
which do NOT route through telephone switch centers, hence aren't
susceptible to overload (some police divisions and hospital
centers are so joined). Utility people were functioning quite
well (considering their terrific repair job ahead) and even though
they are not into the public safety "net" per se are still a part
of it and have the same backups. The Emergency Command Center
operated AS DESIGNED and - even though loaded with an enormous
task - worked on through it. PLANNING, DESIGN, TRAINING and
more TRAINING plus the cooperation of all involved is the key.

By the way, the San Diego area has communications with the Los
Angeles area on a 24/7 basis. The center of each is only a
two-hour drive away. Cooperation between the two areas is,
by many years, quite good. San Diego is still in the state
of California in case you had a lapse in memory...

>Amateur radio did not become a viable alternative for personal
>communications until the advent of the no-code license, which happened

>have hands-free operation.

In a REAL emergency there is no need to worry about traffic
tickets received for using a cell phone while driving.
According to FCC regulations, ANYONE can use a radio during a
REAL emergency.

>> I've served four tours of Jury Duty (in-court, not sitting around

I'm familiar with the instructions a judge gives to a jury panel
at all times in the Los Angeles Superior Court system. Having
been a juror on at least 10 separate cases since 1963 you need
not instruct me on how it goes.

> Now, if only we could get terrorists to instruct people on
>the dangers of responding to a nerve agent attack such as the one on
>the Tokyo Subway in 1995...

I fail to see the relevance to any amateur radio policy issues
there. Are you implying that - because of being granted federal
authorization to operate an amateur radio station - amateurs are
somehow immune to the effects of poison gasses?

>This ignores the fact that a significant portion of the U.S.
>population does not live in urban areas, and in many suburban and
>rural areas, part or even all of the available emergency services are
>provided by volunteers.

You can some exact figures on how big a "significant portion" is
from the U.S. Census Bureau. In two counties of Illinois, one in
Washington, and two in California where I've resided, all of the
public safety organizations are professional. Yes, I am familiar
with other areas where volunteers do the work and do NOT decry,
defame, or denigrate their volunteerism or ability.

> Often those volunteers are every bit as

>medical care, what's more important to you - whether or not they
>provide quality care, or whether they're getting paid or not?

Is that a pertinent question or one to base another reply on to
make a discouraging reply? It's moot. I've NOT been in any
such emergency situation. As far as the local hospital center
where I HAVE received aid twice for minor accident injuries,
they ARE staffed with professionals. Yes, the hospital DOES
have SOME volunteers...but those are not the medical doctors
nor the medical nurses.

The LAPD does have a "reserve officer" system where UNPAID,
but equally-trained and drilled volunteers get to work with
real pros in the field. A tiny percentage. I'm not at all
sure what good they are or how good they are. In a real
shooting incident such as the Bank of America robbery melee
on Laurel Canyon Boulevard in North Hollywood, CA, a few
years ago, I will let the professionals handle it. They did.
[a made-for-TV movie was done on that happening, reasonably

realistic to what we all saw LIVE on TV that day]

>Didn't work out that well on Sept. 11 in NYC, sport.

You mean 11 Sep 01, don't you, sport fan?

NO two REAL emergencies are alike. The Northridge Earthquake
was 11 years ago. The September 11th Attack on America was
4 years ago. As far as the Seismology Lab at Cal Tech in
Pasadena is concerned, the earthquake was NOT caused by
either terrorists or airplane crashes. As far as the U.S.
"intelligence" organization is concerned, earthquakes didn't
cause those hijacked airliners to collide with the WTC.

But, the BIG difference - seemingly - is that the WTC
collisions happened in YOUR state of New York. Note: Another
collision happened the same day with the Pentagon in DC...but
another collision was stopped by passengers, that hijacked
airliner crashing in Pennsylvania.

You've failed to note that the Greater L.A. Area worked
through the 17 Jan 94 earthquake...AND its aftermath...but it
is located well away from the "universe center" of the north-
eastern USA. Ergo, it is of lesser value and may be discounted.
A natural disaster just doesn't have the emotional impact of
terrorists deliberately waging a religious war with the USA.
Ergo, more discounting in others' minds.

>No, he meant what he said, that communications is the first thing that
>breaks down. Unlike the Red Cross courses I took, when I took ICS-100
>it wasn't with a ham group at all, it was with Erie County SMART, and
>the class included doctors, nurses, administrators, and a few hams.
>What he was referring to is communications on the scene of an
>incident. Batteries get weak and die, radios get dropped and cease to
>function or get left on a rig while its former wearer is putting on
>his Scott pack, etc.

But those things "never" happen to radio amateurs?!?!?

Amateur radio SURVIVES where all the normal infrastructure
equipment "fails?" At an "incident" or otherwise? Sorry,
but I can't believe that based on observation of my local
areas.

>> By golly, all them acreditation certificates (probably suitable
>> for framing) look so damn IMPRESSIVE!
>
>What's impressive isn't the certificates, but the knowledge they
>represent. Of course, it's only impressive if one is actually
>interested in knowledge, rather than glossing over such soncerns as
>the liability issues that go along with deploying untrained personnel
>to attempt to mitigate an icident.

Pardon me while I do a small guffaw there. The hams in THIS
newsgroup seem much more interested in the Certificates, the
"association with heroes" and the usual quasi-patriotic
alignment with public-relations statements than with those
who've ACTUALLY BEEN THROUGH an emergency or three.

>> Well, that's what I get for not wanting all them titles and
>> certificates... :-(
>
>Drills are training too. However, if you wanted to serve as a Red
>Cross volunteer, the Mass Care and Introduction To Disaster courses

But, but, but, you told us that an "authority" (sheriff's deputy)
said that public safety radios "break down" at an incident.

How does the amateur radio equipment miraculously keep on working
when non-amateur radio equipment "breaks down?" Enlighten us.

>>>> Continuous denigration of Citizens Band Radio Service doesn't

>determining short term phase noise of millimeter Local Oscillators.

Allan (of the "Allan Variance") is the CO-developer. Ten
points extra for answering who his partner was...

I've got two clocks and a wristwatch that automatically set
themselves to the data sent from WWVB after midnight. Those
are within one second (plus daylight or standard time and the
calendar date) of WWV. Good enough for me.

I've gone as high in frequency as 4mm for someone else and am
only interested academically on progress there. Too expensive
for me as a retiree to go into millimeter wavelengths.

>> Shall the insurance companies disincorporate because hams

>
>Why? You hearing contestors operating as much as a full 1 MHz outside
>their regulated band limits? With hundreds of times their legal output
>power? Interfering with other licensed services?

<shrug> There's all sorts of Raddio Kopps babbling all kinds
of threats in here...I'm sure THEY should be "taking action"
against miscreants, right?

Frankly, without any sort of calibrated directional antenna,
I can't determine if someone is using "hundreds of times
their legal output" on any band in MF-HF. Both receivers and
the VHF-UHF scanner are calibrated as to power input and,
certainly, for frequency, but I can't do anything but GUESS
at transmitter power levels. The LAW does (or should not)
act on "guesses."

As to "interfering with other licensed services" it would seem
I've heard some (alleged) hams to that. They gave callsigns,
but then I couldn't tell from what direction they were located
at or verify that they were there or who they said they were.
A FEW (alleged) CBers have been heard doing "illegal" things
but NONE of that is on the magnitude of the myth-spreaders in
here. I-5 comes within a mile of my residence here, a very
major north-south interstate. It is quiet insofar as truckers
are concerned...just too many heterodynes from too few channels.
Not really a problem to be "without" a radio on freeways here
since call boxes have been spotted at regular intervals.

>> Okay, John, now YOU get back to ME when you've been IN a REAL
>> EMERGENCY SITUATION. Earthquakes not necessary...substitute
>> something that affects about 10 million or so locals.
>
>Up here we don't do earthquakes. We do, however, do blizzards. My

>
>Some of these may not have affected 10 million people, but some of
>them did kill people nevertheless, and when lives are in the balance,
>that's an emergency by definition.

I'm sure that YOUR real emergencies are so much worse than any
of us westerners. :-)

The first 19 years of my life were spent in northern Illinois
where snow and blizzards happened, streets becoming almost
unpassable with rime ice, etc. Are you sure you want to tell
me about snow and ice conditions being so much "worse" than
what we have in southern California?

>> Tell us how it feels to confront a "terrorist" face-to-face,
>> armed with your trusty ham rig.
>
>I'd prefer to be armed with my trusty SKS, actually...but my thing is

>on how to recognize the presence of, and identify, criminal activity
>or terrorism in an emergency, how to self-protect against the risks
>associated with such an incident, understand the potential outcomes
>associated with a terrorist incident, and how to preserve a crime
>scene. Have you?

Not ALL of those things. I don't carry a badge and this ain't
Friday. :-)

Jack Webb DID live around here, though. :-)

Neither do I carry around disposable gloves or booties for
"preserving crime scenes." I use soap and water to dispose
of grime scenes.

Next time I'm confronted with an Al-Quaida group, I'll tell
them "I recognize you because of my Red Cross training" and
they will cease?

>Read carefully. I said most of the *operators* of those radios don't
>have ham licenses. Which is the whole point here, the radio can't do
>much of anything without an operator, now can it?

Actually it CAN. I've designed and built some, both space
and terrestrial application radios. One I didn't design was
one I once "worked" ON the moon. :-)

>Now carry on, soldier, and remember, the number of radios does not
>equate to the number of properly trained operators that are available
>to operate them.

As you were. Dismissed.

When you are ACTUALLY CONFRONTED WITH TERRORISTS, PERSONALLY,
report back (if able) and tell us all about it.

Fall out.

>A former employee of mine (now retired) lost an arm in Vietnam, and receives
>compensation for his disability. He built a fine career as an electronics design
>engineer. What is improper or illegal about that?

There's NOTHING "improper or illegal" about that. In fact, this
individual WAS NOT MENTIONED in anyone's text or context!

Now you are putting on the Grand Champion cload of MORAL ARBITER
and trying to strike down someone who NEVER MENTIONED your "former
employee."

I'm just going to keep your little "moral lesson" in mind the
next time I spot any of your mentions of someone's alleged
moral impropriety, super chief. I know lots of people that I've
never mentioned in here...the next time there's a HINT of
possible "INSULT TO THEM" I will demand YOU apologize to THEM!

> You owe a lot of disabled
>veterans a huge apology for suggesting that succeeding in life is "improper
>and/or illegal".

Have you been dipping into the rum barrel again, super chief?

NOBODY "OWES" ANY "APOLOGIES" FOR NOT KNOWING EVERYONE THAT
>>YOU<< KNOW AND >>NOT MENTIONED IN HERE YET<<.

But, you MISSED someone HERE who goes by the initials SJR...a
mighty warrior, been in "seven hostile actions," will "always
be a marine," and claimed BOTH a medical discharge AND a
disability pension. Yes, "disabled" so much that he received
U.S. money so that he could fly a private aircraft, engage in
rollerblading, engage in hang-gliding, go on weight-packing
"marches" and do all sorts of glorious physical feats of might.

Hello? DISABLED? MEDICAL DISCHARGE (that suddenly turned into
an "Honorable" as if by magic)? EXTRA DISABILITY INCOME (that
he "needs")? Yah, yah, all dat and more...

On top of that, a demonstrated sociopathic liar (repeated) who has never "apologized" for anydamnthing he wrote, who can't ever accept that anyone else has ever challenged him in anything.

By golly, I'm just so glad you are supporting (encouraging?) such an individual...makes it EASY to NOT bother entering amateur radio through federally-authorized licensing...like who would WANT to associate with such as SJR?

Keep up the one-sided Moral Arbiter role. Do it enough and you will have college credits towards an MA in BS.

With all bestest of possible regards,

>Anyone aware of any court challenges to the FCC banning the use of "codes"
>(encryption/decryption) on radio.

Only in the applicable parts of Title 47 C.F.R.

>It seems insane that encrypted data is exchanged freely on the internet and yet
>regulations prevent its use on amateur radio, how such can be prevented on one
>specific form of communications seems insane.

The National Telecommunications and Information Agency (NTIA)
handles the specific formats and contents of the Internet.
The FCC can only govern the "common carrier" aspects of ISPs
and data line tariffs.

As to "codes," the FCC has sometimes (by some) been considered
"insane" for requiring a morse code test for any license having
below-30-MHz operating privileges. Especially so when the same
FCC did NOT require those privileged to operate using morse code
over and above any other mode. That, in itself, is a bit daft.

In Part 97 you will find TRULY DAFT requirements on Spread
Spectrum...STILL there. [Hans Brakob will furnish the correct
Parts and sub-parts for the edification of all]

>Very sophisticated means are even used to embed text/voice data in video and
>binary pictures which is virtually impossible to detect/decrypt with the even
>the fastest computers--within practical time periods (like millions of
>years--let alone lifetimes.)

Radio amateurs and the "amateur community" have for yarns and yarns
considered themselves very legal. They OBEY THE LAW. The LAW
says that encryption is a no-no for radio amateurs.

Hold up example: The late Colonel Rudolph Abel of the KGB, under
a cover name as an "artist" with a "hobby of amateur radio"
operating in NYC around the late 1950s-early 1960s. His HF radio
was used to send-receive encrypted information from the KGB. He
was exchanged for Francis Gary Powers, the missle-shot-down pilot
of a U-2. Abel used "one-time pads" for encipherment, virtually
unbreakable by anything since the encryption key was obtained from
natural random noise (or of "noisy" KGB clerk-typists)(take your
pick).

It's irrelevant whether Abel actually held any sort of amateur
radio license (he probably had a cover for one, no details on

that) but that was his cover excuse for having/using an HF radio when arrested. Amateur radio in espionage activities! Not a good PR thing but so long ago that most have forgotten it or never knew.

The FCC just doesn't "trust" radio amateurs. :-)

To radio amateurs those "spies" are really "CBers," the spawn of satan and are all responsible. :-)

>digital is not better.

You've had experience with a lot of digital voice, have you?

I can show you were MOST folks in here have had experience
with digital voice. Bet you won't know where, though...

> While it performs well under many circumstances,
>it has it's own set of shortcomings.

Such as?

The U.S. military doesn't think so. [but, what do they know,
right?] The WLAN users and installers don't think so. [but,
what do they know, right?] The commercial and government
radio users don't think so. [but, what do they know, right?]
How about the telephone people...do they think so? [but, what
do they know, right?]

> Certainly digital voice is of no particular advantage in Amateur Radio,
>from what I have seen so far.

What have you "seen so far?" Do your ears see? Or is all your
"experience" with digital voice that of others' writings in
here?

'Fess up, Mikey. You HAVE used digital voice and aren't aware
you are using it when you do. <shrug>

There's not even a STANDARD for digital voice on amateur radio
bands yet. There's no way it can be directly compatible with
old-time analog voice...it will need both encoders and decoders
as peripherals with purely-analog radios...or it will need a
radio that has such things built-in. Building-in digital voice

(and data or whatever) will incur a development charge which has to be recouped by amortizing that over a specific time in the manufactured equipment sales prices.

That you can't envision such a thing is of no surprise to me. Few radio amateurs are either flexible enough or experienced enough with new modes and methods, therefore are extreme conservatives when it comes to new developments...if QST hasn't run an article on it, then "it doesn't exist" and "can't be done!" :-)

Len:

Well, it is going to be difficult to argue with you, we seem to be in agreement on a couple of points, and not so far distant on a couple of others where we could not work out some common grounds, however, since you answered the "call of the WILD TROLL" (don't be afraid--just kidding :) here goes...

I just turned over my wireless lan, and yep, there is a type acceptance tag with an VERY impressive FCC notation on it and some VERY impressive numbers, I am in awe! (like a war, all shock and awe, yep, that is me.) But, and back to the real world, I communicate over this device in "encrypted code" so that others cannot read the data off my wan/lan, or gain access and send data over it... I choose a key for all of this and it is a 2048 bit code (million years or so and a bank of supercomputers could gain access to my net, if they got lucky, avg time.)

Now, the important question here, just what kind of felony am I guilty of here, feel free to list titles, paragraphs and sub-paragraphs--heck, if I am going to be a criminal here, I'd enjoy hearing about it in vivid detail. If possible, make it read like a Jessie James novel from the wild west! PLEASE!!!! I am a sucker for old westerns! <grin>

Well, murder mysteries are good to...

John

In your opinion that is.

Hans, we covered all the same territory in this newsgroup
when NCI filed its own petition and also filed responses
to others. For now, anyway, it is a mute point since the
FCC didn't go with the ARRL free upgrades anyway.

Cheers,
Bill K2UNK

Good point, I have noticed some "professional amateurs" about. Couple of "professional idiots" too (deep uncaring concern for politics, maybe damn GREEKS! :), never paid attention to if they happened to be hams or not...

Len:

Don't tell them that digital voice is really a "stream" of numbers which describe your voice/words/tone/etc really, and the other phone (computer really) decodes the instructions and recreates a "clone" of the original analog signal which you will hear.

Also, skip the part about these numbers being encased in packets with a CRC (cyclic redundancy code, read about it on the net, simple to the point of being boring--think "error checking" here) and if there is a "error worth noting" the packet is discarded and a copy of it resent (if it can't be done within a reasonable length of time--microseconds, a defective packet is "played" hoping you can "decode" the error with your ear), so that digital audio can be about as close to perfect as can be obtained (indeed, it can be perfect, if that is what you want--or not at all!) Also, the phones have loads of memory (the good ones) so that packets can be stored and ordered and time spent holding one packet while a previous is being "error corrected."

Well, in a nutshell description, that is... but just don't mention all that, too confusing for "Neanderthal hams", and the few others here probably already know...

TOO LATE!!! I did that a few years ago. Morsemen would have NONE
of that..."morse code gets through when nothing else will"...blah,
blah, blah, blah, blech.

Tsk, these mighty "experimenters" and "state of the art" advancers
don't realize that CDs of music and DVDs of motion pictures are
(horrors) DIGITALLY RECORDED!!!

They don't realize that POTS (Plain Old Telephone System) is
digitized between exchanges...and sometimes inside the same
exchange. Even morsemen's heavy breathing is digitized.

>Also, skip the part about these numbers being encased in packets with a CRC
>(cyclic redundancy code, read about it on the net, simple to the point of being

Irrelevant to here. Morsemen, mighty and macho as they wannabe,
have told us that "CELL PHONES ARE *USELESS* IN ANY EMERGENCY!"
That's that. No goodnik. The telephone system GOES DOWN in any
emergency situation, can't be used at all!

>Well, in a nutshell description, that is... but just don't mention all that,
>too confusing for "Neanderthal hams", and the few others here probably already
>know...

Sorry, John, implying that SOME in here are IGNORANT brings on
accusations of "hating ham radio!!!"

Can't have that! All have to LOVE ham radio as the ARRL taught
everbody sometime...(hic)

Too bad there's no "surplus" SINCGARS radios...the largest field
radio production for U.S. land forces ever...a quarter million

produced since the first went operational in 1989.* Digital voice with (now) built-in communications security or COMSEC with on-line encryption/decryption. NATO allies have the same system, compatible with U.S. SINCGARS radios.

* Some CASES of older SINCGARS have turned up on EBay, but none with intact electronic guts. Those must have been from the "SIP" (SINCGARS Improvement Program) by ITT Fort Wayne, IN.

Heck, not a one in here is familiar with Peterson and Weldon's "Error-Correcting Codes" (MIT Press, nice red hardcover). THE reference for digital coding with/without error correction.

I'd rather reference Brian Burke's statement:

"Morse code gets through when everything else will."

>sucker for old westerns! <grin>

No, I'm not going to strip off certain sub-Parts and make like
a communications lawyer. For one, Phil Kane would get a hissy
fit and make rude noises. Hans Brakob would put on his manager's
hat and try to be a snarly manager type by taking things out of
context and making OTHER rude noises. All othere would just
make ruder noises.

It's all in Part 97, Title 47 C.F.R. Part 97 is one of the
smallest of all Parts. The up-to-date version (supposedly)
is at the ARRL website. The last version published (printed
with real ink on real paper) is viewable at the Government
Printing Office website...and you can get the appropriate
updates as printed in the Federal Register there also...

>Well, murder mysteries are good to...

For fun reading, try the Janet Evanovich series on "Stephanie
Plum." The latest softcover is "Ten Big Ones." The new

hardcover is "Eleven on Top." Funny, funny stuff, lots
better than some of the fantasies parading around in here.

>Extra.

Oh, ohhhh...the AH0A website is hardly an "objective" one
considering that Joe Speroni is a resolute PRO-Code Test
Advocate!

"The only class that is steadily increasing significantly" is
Extra?!?

At present, the Amateur Extra class is 109,543 or 15.17% of the
total of individual licensees (source: www.hamdata.com, FCC
numbers for 0416 UTC on 28 July 2005). In two years' time, the
Amateur Extra class licensees increased by 3,518. In that same
time, Technician class licensees increased by 18,617. [Tech has

been increasing about nine thousand per year since Restructuring]

Are you, as an "engineering pro" trying to flim-flam that the
ratio between Technician and Extra of 5.31:1 means the "Extra
is increasing more rapidly?!?"

The "club" call license numbers increased by 1,050 in two years
or approximately 12.3%...which would make THAT category more
likely as the "most rapidly growing."

>> We'd finally see how much of a "barrier" the
>> 5 wpm code test really is/was, by how many

>don't hear about the change or don't hear that much about the change and so
>won't pursue it. There will also be a handful that aren't really interested
>in HF and so will not upgrade. Still if only 1/4 of the Techs upgrade in
>the next year, it will be quite a burden on the VEs for a while.

As of 0416 UTC, 28 Jul 05, there are 349,936 Technician and
Technician Plus licensees out of a total of 722,083 individual
licensees (exclusive of 9.611 club calls). That is 48.46% of
the total individual U.S. amateur radio licensees.

If one-quarter of the present Technicians "upgrades" then that
will be about 86,484. Yes, I'd imagine THAT would increase
the work of the VEs...it is about 5.4 times the normal number
of new amateur licensees granted each year.

But, on the 10-year grant period of a license, about 34,900 (give
or take) will enter the "grace period" for renewal. Considering
that is the HIGHEST number of "inferior others" in U.S. ham radio,
I'd say that ORDINARY RENEWAL would be a large "burden" on VEs.

By the way, in the last year, 16,088 NEW licensees were added
but 18,644 were expired. That's a delta of -2,556 in one year.
That loss has also been consistent.

Not to worry, you won't read this anyway (my postings are "too
horrid" to respond to, you once said). :-)

>preferential treatment?

There is NO "preferential treatment." A change in LAW has to take
place at a specified time and date. Either fit the LAW or get out.

> All it does is substitutes another problem for the perceived first >problem.

So, how would YOU "fix" it? :-)

> Hans, intellectually dishonest is an understatement! It works on so few
>levels. I'll be howling on both sides. People should *not* get free
>upgrades, and they should *not* be punished for the date on which they
>took the test.

What are you going to do? Retroactively enforce something in
disregard of the LAW? Tsk, tsk, not a good thing.

> Perhaps they could reduce administrative burden, and do all manner of
>other wonderful things by simply having a one time adjustment of
>everyone to Extra?

Tsk, tsk, tsk. If we've told you once, we've told you a million times...don't exaggerate!!!

Your technique of non-argument is just "reducto ad absurdum," just reducing things to an absurd level.

If the LAW changes then all law-abiders should adjust to the changes. If they don't, they are law-breakers. Simple.

If you can't adjust to change, then seek another venue for your hobby. Try ballooning to the "edge of space" or something equally dramatic.

The rules to Newsgroups vary from newsgroup to newsgroup, the problem
with this group (rec.radio.amateur.policy) is that it'snot monerated,
or it is and the monerator isn't doing there job.
unless it is a discussion group rule, again the rules vary from
discussion group to discussion group then it alright.

Rec.radio.amateur.policy is not a moderated newsgroup. There is
no moderator to ensure compliance with discussion group parameters or
maintain civility amongst participants.

> > unless it is a discussion group rule, again the rules vary from
> > discussion group to discussion group then it alright.

He's got me there. I am sure there was a "point" there, but most
likely just the top of his head.

> > Todd N9OGL
>
> Toad, what's a "Monerator", STUPID!?!

We need to get him and Markie to start submitting their made-up
words to Webster's for deciphering.

I still think Toiddie has a good case against the Taylorville
Public Schools for letting him graduate High School with those horrific
English skills. And Markie's always looking to sue SOMEone...He ought
to go after the school district that let HIM loose.

And you are, once again, lying.

Why do you keep doing that, even in the face of archived evidence
to the contrary?

What combination of drugs were the people who "raised' you on that
you get these strange ideas that lying is "OK" and that it is somehow
"justifed"

What do you think you're accomplishing?

> > > > > > continue to lie and deceive others about your "achievements" in general

> matter

Sure I have...starting with his lies about having operated legally
from Somalia.

Follow that up with his insistance that "unlicensed devices play a
major role in emergency comms". Wrap it it (for now) with his
silliness about ARES not bein able to respond to call-outs and it's
service being "overblown".

> > So far all we have are your assertions and your damnations for
> > anyone insisting that you substantiate them.
>

Nope.

He hopes that he can make up stories that will ass fopr valid and
then get's riled when he's called on them. Then he get's even MORE
riled when anyone dares to challenge his "opinions".

He accuses me ot that, but that's more Brain trying to his tracks.

> > I do neither.
> >
> > indeed you bather and rage and act like a child

"bather"....

"rage and act like a child.."?!?!

Riiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiiight.

> > That YOU would expect it to be so is the "faulty thinking".
> >
> > more of stevie making up something then disproving

I didn't make any of it up, Markie.

Making things up is in LennieRealm. That's the home to those who
like to lie, misdirect, cuss and accuse others of "childish" behaviour
all-the-while stomping their feet and demanding that others threat them
a certain way while refusing to do it themselves.

Like you, for example.

Nope. I'd like to carry one meaningful discussions (and
frequently do) about Amateur Radio issues.

The problem is you, Lennie, and just a few other ner-do-wells who
seem to think that what you do is "constructive".

Silly Brain.

Lennie, Lennie, Lennie....

Lies, lies and more lies.

I'd ask you to substantiate it, but you can't even make good on
your own promises, you will have too dig deep to find THOSE assertions
(deep as into your imagination...they didn't happen here...)

> Hello? DISABLED? MEDICAL DISCHARGE (that suddenly turned into
> an "Honorable" as if by magic)? EXTRA DISABILITY INCOME (that
> he "needs")? Yah, yah, all dat and more...

Wondering where you came up with all of that, Lennie.

You're trying to put all the big peices together with .060 thread
and wondering why your stories don't hold water...

> On top of that, a demonstrated sociopathic liar (repeated) who
> has never "apologized" for anydamnthing he wrote, who can't
> ever accept that anyone else has ever challenged him in anything.

Now why would you suddenly change the subject from me to you,
Lennie?

Just can't stand anyone else being in the spotlight for a minute,
can you?

> By golly, I'm just so glad you are supporting (encouraging?)

Uh...675,000 other Americans.

Thankfully none of them are "you", Lennie...

One time vs permananent. We obviously differ as to
what that translates too. For now, again, it is a mute
point.

> Clearly they >DID< want such relaxation, to the tune of almost 2/3 of all
> hams getting "relaxed" right up to the next class of license.

We supported ONE-time upgrades...NOT a permanent
change in testing going forward. Again, we will just have
to disagree as to what that translates to. You are
entitled to your opinion, as am I.

Cheers,
Bill K2UNK

A trip down memory lane, Bill. A few years ago, while he was Executive Director of NCI, we saw this regarding Fred Maia.

Lee Blaske writes: (about W5YI)

In other words, theory and math questions would be removed from the Technician examination.

I think Fred is still a Director at NCI, and even more scary, has influence on the makeup of examinations through NCVEC and his association with W5YI-VEC.

I think Fred's very "unique" ideas about Amatuer Radio and VE
testing are no doubt part-and-parcel of the inordinately high number of
people who require re-test by the FCC.

He should be ashamed.

N9OGL:

Well, there ya go, trouble is, when you give control to an incompetent he is going to focus on control and being a disciplinarian, any real merit is lost. Any successful group must be flexible to the majority's rule, as only if the group is responsive and meets the needs of those is it valid--problems with a "control freak" moderator are the same--most newsgroups with such do not survive--about as many posting as QSO's on HF, they begin dying--moderated newsgroups.

Only reason I don't send binaries, pics etc in moderation here, no one intelligent to uudecode them (also, there has just not been a need), that is obvious and really what the center of most problems we are speaking of--control freaks managing to having halted progress...

John

PSK31 is an encryption/encoding method as is morse encoded cw both
legal becuase they are published (and morse is of course enshined by
name in the rule book) the rules are rather vague on where the line
drwn in these matters esp as technolgy advances so fast to make one
year unbreakable code, todays public key

cuting here from another thread not disputing you but you have a reference for the below ad not heard it and wanted to follow up on it

Hold up example: The late Colonel Rudolph Abel of the KGB, under a cover name as an "artist" with a "hobby of amateur radio" operating in NYC around the late 1950s-early 1960s. His HF radio was used to send-receive encrypted information from the KGB. He was exchanged for Francis Gary Powers, the missle-shot-down pilot of a U-2. Abel used "one-time pads" for encipherment, virtually unbreakable by anything since the encryption key was obtained from natural random noise (or of "noisy" KGB clerk-typists)(take your pick).

It's irrelevant whether Abel actually held any sort of amateur radio license (he probably had a cover for one, no details on that) but that was his cover excuse for having/using an HF radio when arrested. Amateur radio in espionage activities! Not a good PR thing but so long ago that most have forgotten it or never knew.

The

Allow to point out the flaw in your reasoning

Fred W5YI has his opinions, Bill has his opinion (I am sure not all of
which are the same) I have mine which other than supporting the end of
code testing deverge as well

NCI's opinion and action are based on the common threads of the
membership and BoD

Fred and Bill and I are all free to have opinions on other subjects

This line of attack makes no more sense than saying NCI hates code use,
because some of it memeber, like myself, think (and express) the ARS
would be better off if the ARS abandoned Morse code USE

NCI is colaition with members holding a wide range of opinions

"John":

I'm amazed that you are seemingly unaware that almost every e-mail
program on the market decodes UUE automatically. The fact is, you
shouldn't be doing so in a text newsgroup.

Quite obviously.

> There's a limit to even the best error-correcting codes. But they

Yep. I'm quite familar with forward error correction. What Mark needs
is a sort of backward error correction.

I think I see one of your difficulties, Mark. You post gibberish which
others cannot understand and others post in properly (for the most part)
English which you are not able to understand.

> doesn't matter to you if I don't see your logic you just drive on
>
> and you have made a logical post in year on the subject code testing
> for example you don't care just drive on

Your semi-sentence is incomprehensible.

"an old friend" <kb9rqz@yahoo.com> wrote

> Fred and Bill and I are all free to have opinions on other subjects

Fred and Bill are Directors, and presumably represent all of us members.

When Fred, then Executive Director of NCI, makes a speech proposing reduction of the technical content of the entry examination, that implies something about the position of the organization which he leads.

When the Board of Directors does not issue a disclaimer after that speech, observers (including the FCC) are likely presume that the statement is more than just the personal opinion of W5YI.

That presumption is reinforced when the same Board of Directors later enthusiastically supports free upgrades for nearly two-thirds of all licensees without answering a single test question pertaining to their new license class.

K2UNK can express his personal opinion (and I believe him), but the actions of NCI leadership are at direct odds with his personal disclaimers. You and I as individual NCI members can freely express opposing views, but those individual views carry far less weight than the Board of Directors who express "official policy".

2736. RAC Bulletin 013-05 Industry Canada Introduces Alternatives to Morse Requirements for HF

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-29 19:37:30 UTC
From: K&#65533;HB <groupk0hb@earthlink.net>
Message-ID: <_zvGe.6818$Uk3.960@newsread1.news.pas.earthlink.net>
Source record: 114095

Per Canada Gazette notice DGRB-003-05 22 July 2005, Industry Canada has adopted elements of the RAC "Proposal on Morse Code and Related Matters" and has removed the mandatory requirement for the Morse Qualification for access to the HF bands below 30 MHz.

Effective immediately, amateurs certified with BASIC Qualification prior to 2 April 2002, and amateurs certified with both BASIC and ADVANCED Qualifications, may operate on HF. Amateurs with BASIC only Qualification certified after 1 April 2002, and who achieved a pass mark of 80% or greater, will also be allowed to operate on HF. Amateurs certified BASIC only Qualification after 1 April 2002 having achieved less than 80% pass mark, will either have to qualify in Morse, write the Advanced or re-write the Basic examination to obtain HF privileges. This latter requirement is related to a decision to increase the BASIC examination pass mark to ensure that candidates have been tested in all areas of the syllabus.

For details, see the Canada Gazette notice at http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/sf08435e.html and the "Latest News" page on the RAC web site at http://www.rac.ca .

Snarly Stebie doesn't do much else in this newsgroup but
boast generalities of a non-specific nature while generally
insulting everyone who doesn't agree with him.

He has changed his boasting so many times that it is difficult
to know what he has actually done or experienced.

>> > > > (UNSNIP)...and I do have opinions about amateur radio issues.
>
>> > > None of those substantiated by reality either.
>
>> > Not the "reality" that you dwell in.
>
>> My reality is truth.
>
>you have no contact with reality prehaps not even by radio

Snarly Stebie's version of "truth" is whatever he wants to
claim on any particular day. He has NO references on any of
it. Some examples:

Stebie would challenge "call the VA and they can tell you"
[all about Stebie's military record] Actually, they can't
under a law almost two decades old restricting personal
information on individuals. Secondly, the NARA (National
Archives and Records Administration) in St. Louis, MO, is
the place to go for individual military personnel data;
that's where any VA office would go for their information.
Anyone can access the NARA website and even request data,
but that data request has to be accompanied by proof of
who you are and why you are asking (personnel departments
of companies have limited access greater than individuals).

In the beginning of Stebie's tirades he mentioned a Medical
Discharge that cut his marine career to 18 years (rather
than a full 20). He then made that an "Honorable" instead
of a medical discharge; if he had gotten that discharge some
5 years before (his alleged time was 1974 to 1992), why
would he not have said "honorable" in the beginning? That's
all archived, BTW.

Stebie claimed to have been in "seven hostile actions"
during his military career, but it seems he is spinning
that into the USMC being involved in those...while he was
in it. He has no proof at all shown in here that HE was
IN any of those hostile actions. That's in newer archives.

Stebie has claimed "working in military radio communications"
but isn't at all familiar with the very common (quarter
million R/T units made and operational) SINCGARS radio set
that went into service first in 1989 and continues to this
day. Considering his claimed active duty time was 1974 to
1992, he should at least have known about that set...and of
earlier ones. He could NOT name any particular radio set
by its nomenclature which is VERY unusual for anyone working
in that field. That's in archives over several years.

At best, Stebie's claims are only for an "Assistant" NCOIC
position at a MARS station in Okinawa in the 1980s. MARS
stations are NOT a regular part of any service branch radio
communications...are, at best, a sort of special services
like operation where they MIGHT be used for regular comms
in case of catastrophic happenings to the Defense
Communication System (DCS). That's in very recent archives.
Worse yet, it took months for Stebie to acknowledge that
the Department of Defense directs MARS, even when given the
link to the directive itself available on the Internet at
the DoD website.

>> Yours is...well...it's something else...
>
>you would never know
>
>You accept press realeases as gosple turth

>
>that is stupid, and at best niave at worst willfully blind

Stebie works on an emotional level rather than a logical one.
If some PR spin makes him feel good, he "believes" it. If
it doesn't make him feel good, he is offended and thinks it
is an "insult" to both him and amateur radio (as he knows it).

>> > > > You like none of it and so launch your personal attacks.
>
>> > > I consider YOUR "attacks" (mistruths, deceit, etc) about Amateur
>> > > Radio to be an "attack" on me. You make disparaging, untrue statements
>> > > about Amateur Radio and expect it to be blown off.
>
>> > You are easily offended. I think that you wish to be offended.
>
>> Nope. I'd like to carry one meaningful discussions (and
>> frequently do) about Amateur Radio issues.
>
>a real whopper there Stevie

True! Google archives have the proof in them, in thousands of
personal-insult messages generated by Stebie...with only a few
(perhaps a dozen at most) which are actual discussions devoid
of personal attacks at somebody.

>> The problem is you, Lennie, and just a few other ner-do-wells who
>> seem to think that what you do is "constructive".
>
>yes we think it is constructive to look behind the curtain at the real
>world

That would disturb Stebie's fantasy. He wants the nicely-ordered
military-style discipline he is no longer a part of...one where
everything is explained and laid-out, no room for deviation from
the precise order of things. He can fit into that. However, if
the environment changes, he gets very upset and angry. He can't
handle disagreements with his opinions, tries to defend himself
(no need in normal discussion not about a person) by issuing a
series of personal insults directed at his perceived "accuser."

There is, nor has there ever been, a SINGLE "correct" way of
doing things in amateur radio. Amateur radio is NOT a military
branch and the ARRL is NOT a directive-issuing "headquarters" (no
matter what some like to believe). Any "need" to hold tradition
tight and fast, to "work" stations in a particular mode (such as
radiotelegraphy) is purely personal perception. Hewing to one
particular way of doing things is NOT indicative of some kind of
expertise in anything.

But, the old rank-status-privilege class consciousness of the
old six-class license system suits the ordered, disciplined

military psyche. One "works up through the ranks" (in some folks' perception) even though the hobby is just a hobby, not a job, not a branch of the military, not part of a union or craft or guild. It CAN be a fun hobby, an interesting personal recreation, but having to march in ranks to some saber-rattling control freak's idea of what constitutes "real" ham radio is NOT a recreation. Such is more like a variant of sado-masochism.

Radio is radio. Electrons, fields and waves behave by THEIR physical laws, not the laws of various administrations. By the nature of EM propagation, administrations MUST regulate radio use to keep the EM chaos to a minimum. Licensing is just a tool of administrations to regulate civil radio. The "class" of license is a human-made artificiality which does NOT recognize any actual "expertise" (the FCC is NOT an academic institution). Skill at radiotelegraphy does NOT indicate anything but skill in that particular mode; radiotelegraphy does not make a radio operate "better" (or worse) below 30 MHz. Many radio amateurs do think so, but that is their own personal perception which is NOT borne out by natural laws of physics...or the experience of every other radio service.

One MUST look at what other radio services are doing. Firstly, amateurs must co-exist in the EM spectrum with all other radio services. Secondly, other radio services, having (usually) more flexibility in mode type use, can offer insight into possible new methods of communications. Thirdly, closing off minds to what happens elsewhere and claiming it is "for the good of amateur radio" is a simple cop-out, an excuse NOT to learn, investigate, to enquire about new things, new possibilities; it's a rationale for being LAZY.

>cuting here from another thread not disputing you but you have a
>reference for the below ad not heard it and wanted to follow up on it

==========

Hold up example: The late Colonel Rudolph Abel of the KGB, under
a cover name as an "artist" with a "hobby of amateur radio"
operating in NYC around the late 1950s-early 1960s. His HF radio
was used to send-receive encrypted information from the KGB. He
was exchanged for Francis Gary Powers, the missle-shot-down pilot
of a U-2. Abel used "one-time pads" for encipherment, virtually
unbreakable by anything since the encryption key was obtained from
natural random noise (or of "noisy" KGB clerk-typists)(take your
pick).

It's irrelevant whether Abel actually held any sort of amateur
radio license (he probably had a cover for one, no details on
that) but that was his cover excuse for having/using an HF radio
when arrested. Amateur radio in espionage activities! Not a
good PR thing but so long ago that most have forgotten it or
never knew.

==========

For a couple references on the above, the best one I have
is David Kahn's "CODEBREAKERS, A History of Cryptography,"
a non-fiction best-seller of the 1960s. Been reprinted in
soft-cover a couple times, once in hard-cover. Libraries
would have it. A couple inches thick in hard-cover. The
next reference is Francis Gary Powers' own biography. All
of that happened during President Eisenhower's term over 40
years ago...at the time an embarrassment to the United States
due to Eisenhower not admitting it at first. Headline stuff
then, much press. A search of "Rudolph Abel" will turn up
more on the 'web. Search also "one-time pads" for the
method of encryption/decryption.

The U-2 itself was made, but not fully assembled at Building
82 of Lockheed at (then) Burbank, CA, airport. It was a
large hangar-plus-office-space building just off of Winona
Avenue crossing the major north-south street of Hollywood
Way in the east San Fernando Valley section of Los Angeles.
Building 82 was referred to as "the Skunk Works" in reference
to the "Lil Abner" comic strip and a local Burbank plastics

factory nearby that used to emit stinky smells (long since moved). Heavy security outside but the building was in plain view (along with the building number sign) for many years to drivers on Hollywood Way. The Skunk Works was moved to Palmdale in the high desert years ago and all Lockheed Aircraft buildings have been razed at what is now Bob Hope Airport (formerly Burbank-Glendale-Pasadena Airport). I've never worked for Lockheed but have worked for a couple contractors who supplied avionics for Lockheed, desitined for installation in some Skunk Works program (which ranges from the original P-80 Shooting Star through the U-2 and through the SR-71 Blackbird and on into part of the F-22 engineering, plus a few smaller ones). As far as I know, many details of what went on at the Skunk Works and its aircraft are still "sensitive" even though lots of information on them have been made public.

By the way, both the CIA and NSA have virtual museums on the Internet and considerable text on various newsworthy cases of espionage of the last 70+ years. There's also a history of military intelligence found at the Fort Huachuca, AZ, website. Fort Huachuca is the M.I. training center and also the UAV (Unmanned Aerial Vehicle) "flight school." It's also the LAST place where the U.S. government teaches morse code cognition as part of military intelligence electronic intercept military occupation specialty training (four different categories), all branches plus civilian government workers. Needless to say, the morse code classes (all done by computer programs now) are NOT a large part of the M.I. school curriculum.

While they removed the requirement for a Morse exam, note that they increased the written examination passing score for the Basic License. FCC could learn something from these guys.

an_old_friend:

Perhaps spread spectrum is used by spies, who knows, or sat links--we will always catch only the poorest of spies--undoubtedly they DO NOT represent the "good ones."

But, most radio is a poor vector for spies, the internet is a much more viable medium...

A true "random number generator" has escaped being ever realized in a practical form. The "random noise" from the background radiation of the universe comes very, very close.

In computing, if a very high quality "random number generator" is needed, it will always be outboard (white noise generator.) No computer algorithm ever developed is able to generate REAL random numbers. Success is only measured in how close they can come to the ideal...

... the "noise" from a large number of typists keyboards might be close enough, although not perfectly random, for some applications...

John

The RAC site dates it July 30th and if that's not a typo, then one has
to wait till Saturday to make use of these changes. So prompt it is now.
When I was a kid and they dropped the requirement that you be over 15 to
get a ham license, the announcement came in December, but it didn't go
into effect till the end of April.

I'd actually consider another part of the bulletin maybe more significant:
Holders of only the BASIC Qualification may now construct, install
and operate transmitters from kits that have been commercially
designed and packaged. BASIC-only holders still are not authorized to
modify or install and operate modified commercially manufactured
equipment.
It's not a return to complete building, but it's far better than the
previous restriction. (When things were restructured back in 1990,
BASIC holders could not build any transmitters, you had to have the
advanced license.)

Now there's even less difference between the two licenses. If you want
a full kilowatt you need the advanced license, and if you want to control
a repeater you need the advanced license, and if you want to build a
transmitter from scratch you need the advanced license.

Michael:

I can guarantee you, those "regulations" have been broken since they were enacted...

... and logic suggests, how would they ever prove that the transmitter was built by a novice, and not an advanced who then gifted him the transmitter?

That is the real problem, regulatory fools never get a clue, take themselves far too seriously and end up being a form of comedy more hilarious than the three stooges...

but not if you have held your license for some time

quote

(2) Amateurs certified prior to April 2, 2002 will be allowed to
operate in the HF bands below 30 MHz based on the experience and
knowledge they have acquired over this period of time.

unquote

maing that if Ilived a bit futher north than I do and held a canadian
call I would have hf access now (or tomarrow rather) without having had
to make any higher score

Logicaly therefore I would expect in time This to evolve into 80 for
access now or pass the test and wait 2 years for access by experence,
or possibly for the Ca to decicide keeping track of the 2 score levels
is too much work

agreed but not every thing eitehr or any of them do can be construed as
acting as NCI

>
> When Fred, then Executive Director of NCI, makes a speech proposing reduction of
> the technical content of the entry examination, that implies something about the
> position of the organization which he leads.

In your mind I guess it does, not having heard the speech, in context,
I don't assmue that, any more than I assume that everything Roberts has
filled for his cleints represents his own views
>
> When the Board of Directors does not issue a disclaimer after that speech,
> observers (including the FCC) are likely presume that the statement is more than
> just the personal opinion of W5YI.

obviously you do, but if he made that speech in his capity as head of
W5YI VEc group then I would be less likely to assume that

and you should KNOW what assuming does Hans
>
> That presumption is reinforced when the same Board of Directors later
> enthusiastically supports free upgrades for nearly two-thirds of all licensees
> without answering a single test question pertaining to their new license class.

you bust the chops of NCI and Not the ARRL for this, interesting

Nope, if you pass the Basic written (but don't make an 80% score) you must then take the Morse exam to get on HF.

You asked for links, I gave you links.

I realize that it is a common practice on Usenet to criticize the source, and not the merits, of the ideas presented. That's why I summarized the arguments and invited you to consider their validity independent of sources and personalities. The invitation is still open...

>... the other two simply recommend using common sense ... DUH!!!

Sometimes it is necessary to repeat good common sense, even package it in easily understood summaries, especially in a community where even basic common sense is lost on some participants. Common sense can also serve as a useful gateway to more subtle and complicated concepts. I liked Professor Timo Salmi's concise article, especially the graphics in front of the bullet points. I even think he would be flattered that you find his words to be common sense. I only wish that his command of idiomatic and colloquial English was sharper (he's Finnish), so that his writing would be more approachable and familiar to the average Usenetter.

>Sometime around the mid-late 90's myths began to float about, we live in a
>"echo chamber" and simply because these myths come echoing back in force is
>only proof that some where successful in generating belief in the myths, are in
>a remarkable number of people...

>Attempting to limit the internet is insane... this has been and will remain a
>more powerful medium of exchange than many can accept, big deal...

Ah yes, Power To The People, and all that. Just don't forget that without the cooperation of many large ISP's, communications backbone providers, and hub server sites, what we recognize as Usenet would quickly collapse. Such entities are already enforcing de-facto policies by dropping binaries and cancelling SPAM. If the hub sites don't carry it, that means that their downstream sites won't get it either. Posting binaries in this newsgroup may subject it to powerful, and potentially undesirable, forces beyond your (and my) control.

>Some dreamed of passing binaries back and forth here, worked and developed
>methods--for some strange reason--others came later attempting to halt it. I

>admit this insanity is hard to understand--I simply note it exists... I don't
>even care what the reason are, or the arguments of the "control freaks" consist
>of...

So you don't even want to listen to any arguments other than your own?
Well, that does explain your reaction.

>Google groups? NO ONE SHOULD EVEN BE USING GOOGLE GROUPS!!!!

Why not? Oh, I realize that the current Beta is in many ways inferior
to the former Google Groups. I also dislike having to crunch on its
various bugs during the Beta rollout. But for many on the net,
precisely because of the 300+ GB of binaries per day that are being
thrown back and forth, their ISP's simply don't want to deal with
Usenet, and thus Google Groups is one of their only access points to it.
It's even free. My postgraduate alma mater, unomaha.edu, recommends
that its students who want to read Usenet go to Google Groups, as
news.unomaha.edu went away several years back. My employer also wasn't
interested in running the necessary multi-Terabyte disk farm and
dedicated T-1 or T-3 links either, and gave up newsgroups at about the
same time.

Also, where else are you going to find 23+ years of archived articles?
I still have Usenet news, and a good newsreader (nn), through my ISP
from home. Still, I often find myself going to Google Groups for
archival material, advice on specific questions (avoiding the flamage
that usually contains words other than the specific key words for which
I am searching), as well as a cross-check on the propagation of articles
I post locally. For this newsgroup, I find its long-term memory
invaluable to separate the wheat from the chaff, and the experts from
the kooks.

sorry you confused me with you 2 posts

I am not saying what the now current (or tomarrow current) rule

I was speculating on the future as you would seen if you had bothered
not to emove the staement from its context

quote

(2) Amateurs certified prior to April 2, 2002 will be allowed to
operate in the HF bands below 30 MHz based on the experience and
knowledge they have acquired over this period of time.

maing that if Ilived a bit futher north than I do and held a canadian
call I would have hf access now (or tomarrow rather) without having had

to make any higher score

Logicaly therefore I would expect in time This to evolve into 80 for
access now or pass the test and wait 2 years for access by experence,
or possibly for the Ca to decicide keeping track of the 2 score levels
is too much work

unquote

your tendency to do is rising to point of apealing like deliberate

Yep

What's interesting too is that new Basics can access HF two ways:

1) Pass the written with 80% or more right

2) Pass the written with less than 80% right *and* pass the Morse Code
test.

IIRC, the basic pass level is 60% (!)

Sounds a little like my old "Chinese Menu" idea.

Read my comments to the FCC regarding the ARRL proposal. I did a lot more than "bust their chops". If you've a copy of the FCC NPRM, turn to page 17, paragraph 31, then look up the document rerenced at footnote 142. It's on public record at the FCC ECFS web site.

Paul:

I realize YOU wish to see binary banned, I realize YOU are NOT alone...

I think you can probably come up with a lot of reasons YOU think they should be banned--and are good enough, but, freedom of exchange over-rides anything you can come up with! end of story...

But, they are not good enough reasons to block the exchange of ideas, there is no "gentleman's agreement", there is a bunch of cheap-shot idiots like you attempting to push your control on the mindless.

You think if you argue long enough and hard enough you may pull the wool over the simple minded masses eyes.

This is the internet, it was founded on the idea of free, un-hindered exchange of information and data--you are best suited for the amateur bands where the common mode is to suppress freedoms through regulations--GO HOME, DO NOT DARKEN OUR DOORSTEPS!!!

You are nothing but a simple idiot we have seen before, and dealt with...

An NCI Director showed up here, so I challenged him on the issue.

If an ARRL Director or NCVEC Director shows up here, I'll do likewise.

An interesting announcement! Here in Canada, Morse Code is now an
alternative method of qualifying for HF privileges.

In other words - Morse survived!

A couple of the other requests from the Amateur community (via the
RAC proposal) were granted as well - increasing the pass marks on the
exams to 70% from 60%, and the addition of commercial kit-building
privileges for Basic license holders.

Not bad - now there's a regulatory agency that listens. Well done,
Industry Canada!

John,
Since you don't use a callsign, I believe you are not a licensed amateur radio operator.
I wonder why so many unlicensed people (mostly CB'ers) post their opinions in Amateur Radio groups?

I believe that most licensed amateur radio operators, don't care what the opinions of unlicensed people are about amateur radio. I know I don't care.

And as for the trolls who say "I don't use my callsign on the internet because of privacy concerns", that's just another way of saying that they are unlicensed CB'ers without a callsign.

The internet is big enough for all people to post their opinions. I am sure there are many news groups dedicated to CB'ers. They should use them instead of Amateur Radio groups.

Tsk, tsk, TSK! You FORGOT to mention the "papers" on the ARRL
website describing Peter Martinez' PSK31. [that's not like you]

You are skirting a very grey line on "cryptology." PSK31 is
NOT about "intentional obscuration of the meaning of a
communications," the boilerplate statement in Part 97 on
what can be sent or not sent by radio amateurs.

On the other hand, PSK31 is sufficiently UNLIKE conventional
TTY codings that it cannot be decoded by any TTY machinery
or even Hellschreiber.

Too many have the emotional labeling of "cryptology" in regards
to secrets and spies. In checking out Webster's New World
Dictionary, Prentice-Hall 1989, it defines "cryptography" as
"the art of writing or deciphering messages in code." Tsk, that
would apply to morse codes, wouldn't it? :-)

Have they SAID so, in public? I don't think so. It IS implicit
that any "directors" DO represent the membership, though.

Has the ARRL said it "represents all radio amateurs?" You betcha
and for years. That's "okay" but a small special-interest group
is in ten kinds of hot water, ain't it? :-)

>When Fred, then Executive Director of NCI, makes a speech proposing reduction of
>the technical content of the entry examination, that implies something about the
>position of the organization which he leads.

Tsk, you've messed up present and past tenses. Are you tense?

I think that regular readers are fully aware of your personal
dislike of Fred Maia. You need not repeat yourself too much.

>When the Board of Directors does not issue a disclaimer after that speech,
>observers (including the FCC) are likely presume that the statement is more than
>just the personal opinion of W5YI.

I love it when the ARRL is somehow sacrosact and NO ONE dare
question THEIR board of directors...yet a small special-interest
group is suddenly ACCUSED of implied perfidy!

>That presumption is reinforced when the same Board of Directors later
>enthusiastically supports free upgrades for nearly two-thirds of all licensees
>without answering a single test question pertaining to their new license class.

Tsk, tsk. If the FCC wished, they could eliminate ALL testing
and licensing of U.S. radio amateurs...or not...all without the
permission of K stroke-O H B! Really...

>K2UNK can express his personal opinion (and I believe him), but the actions of

Ah, Raddio Kopp Court is now in session, dishonorable Judge Heil
presiding! Oyez, oyez.

Other than "committing public fraud" (somewhat questionable)
I'd say that Mark's seven statements are CORRECT. The proof
is in Google archives.

But, Gruppenfuhrer (excuse me, JUDGE) Heil LIKES to pick on
those he perceives "weak" and unmercifully berate them in
anywhichway he can. Only two such postings berating Mark
this morning? Tsk, Judge (mental) Heil is falling down...

>> more steve lying to evade his respoinilty for his own words

>I think more of us should take respoinilty for our actions.

Tsk. So far, you've not done very good at all on that!

Tsk, tsk. I think "more of youse" ought to take some
responsibility for another PCTA extra's "actions" in
here. At least take up a collection to buy him some
downers...and make sure he TAKES them...

What was that FCC phrase about amateur radio..."a
natural propensity towards international good will?"
Golly gosh and gee, shouldn't all these royal PCTA

extras push a little of that "good will" domestically?

I guess not. Their version of amateur radio is coming
to a nasty, inevitable END. They are just so SURLY!

Have a nice Oriongasm.

>convey. Perhaps you thought you did so. You were wrong.

Oh, oh...self-promotion to a JUDGE of ALL.

"Heah come de judge, heah come de judge!"

>No, Mark, it is still *your* problem. You aren't able to communicate
>with others by use of the written word.

Tsk. Fearless Leader speaks!

Can we understand, your holiness, that all MUST make fun of
those with dyslexia? Apparantly that is the RULE in here.
[or is it RILE instead?]

>1. You write gibberish. That is not a lie.

You've written personal insults to people who disagree with
you. That is not a lie.

>2. You were questioned about what you wrote and what it was supposed to
> mean. That is not a lie.

You've been questioned about what you wrote and what it was
supposed to mean...you've only responded with personal insults
to those who have disagreed with you. That is not a lie.

>3. You write crap which others can't understand and you've claimed
> "abuse" when someone tells you so. That is not a lie.

So? You write CRAP (merde, shit, whatever) which only PCTA
extras can understand and claimed that NCTAs "abuse" you,
therefore "justifying" your personal insults against them.
That is not a lie.

Have fun making fun at others' expense, Herr Gruppenfuhrer.
That is your nature, apparently.

You are a God of Radio and JUDGE over all others who don't
agree with you. Charming behavior. Not.

Part of me is thinking that there was a reduction in the passing mark
at some point, and this just addresses it. I've not paid attention, and
the documents issued in 1990 after the restructuring says nothing about
the passing mark. But though I've not paid full attention, it is
something I have a vague feeling might have happened. If there
was such a reduction, then obviously that date is when it happened,
and this new bit just acknowledges that a higher pass mark is
deemed necessary for HF.

Or perhaps it's just simply in grandfathering people, they decided
that it wouldn't be as automatic as some might have wanted.

Well, according to the bulletin, the passing mark is no 70%.

But your're right about the menu. When they restructured back in
1990, some people interpreted it as a coherent number of steps,
with the Basic license at one and and the advanced with code
at the other. But it was (and still is) more of a mix and match
setup. People could pass the Basic and Advanced tests without
needing to pass a code test. Of course, that meant no HF privileges.
Pass a code test, and you got some HF; pass the faster code test
and you got full HF privileges. Code determined whether or not
you could operate at HF.

A few years back, I think it was 2000, they dropped the faster
code test.

Another way of looking at it is.

1) They've raised the passing score on the written exam to 70%.

2) With that passing score, and a 5WPM Morse exam you gain access to HF.

3) If you pass with a score of 80% or greater, the Morse exam is waived for HF.

I've never met the guy, so it'd be pretty far fetched to suggest have a "personal dislike" for him.

I certainly, however, disagree with a lot of his philosophy.

Same applies to you. My guess, from what I see here, is that you're a humorous guy, good conversationalist, and that we'd find much in common. But having never met you, I can't pretend a "personal like" or a "personal dislike" for you. I certainly, however, disagree with much of the philosophy you express here.

Ahem...those "number stations" on HF aren't for sports scores or
lottery numbers... :-)

>A true "random number generator" has escaped being ever realized in a practical
>form.

Untrue, John. PRSG (Pseudo-Random Sequence Generators) have been
in common use in both communications and instrumentation for about
three decades now. Using just 9 standard digital logic packages
with a 10 MHz clock, the PRSG I built for instrumentation would
not repeat until 913 years had passed. Reference: Electronics
Designer's Casebook Number 3, a collection of Electronics
magazine articles published between February '78 and January '79.
I was the author of that. "Electronics" magazine was a bi-weekly
industry/subscription periodical published by McGraw-Hill; McGraw
Hill morphed it into four separate monthlies.

>The "random noise" from the background radiation of the universe comes
>very, very close.

No, does NOT "come close," that IS the definition of random.

>In computing, if a very high quality "random number generator" is needed, it
>will always be outboard (white noise generator.) No computer algorithm ever
>developed is able to generate REAL random numbers. Success is only measured in
>how close they can come to the ideal...

Sigh. PERIODICITY is at question? I would say that a repeat
period of a century or more is pretty dang good. Periodicity
greater than that is found in the DES and some of the algorithms
at the NSA.

SOME finite periodicity is NECESSARY to set code keys and thus
enabling a decode to start to prepare to get ready to begin.
That just cannot be done with true random noise thingies.

In some of the Swiss (formerly Swedish) Crypto AG products, a true natural random noise source generates the random key patterns for both encryption and decryption sequences. A problem there is that the decrypt sequence MUST be identical to the encrypt sequence and that decrypt sequence transported to a recipient. With the DES and similar PRSG-driven sequences, the decrypt key is NOT required to be sent separately...all that is required is to set the sequence at some pre-determined state (the "code key" enters that) and this aligns the sequence with the received sequence...a sync is possible and decrypt can proceed.

As to "simple algorithm" periodicity, a 913 year pattern repeat at a 10 MHz clock is quite long. That was achieved with a 2^33-1 sequence bit pattern Exclusive-ORed with a 2^25-1 bit pattern. Each of the individual PRSGs had NO common factors in periodicity so they Ex-ORed to a pattern of 2.88 x 10^17 clock periods. That could be implemented on any PC (I did that just for funzies) with a 2 GHz clock and sequence faster than the hardware version clock at 10 MHz. So that one repeated about every 100 years...

>... the "noise" from a large number of typists keyboards might be close enough,
>although not perfectly random, for some applications...

The humans-replacing-monkeys (at the KGB) was taken from David Kahn's "The Codebreakers" and was a quote from someone else.

Today, at this "late" hour of 5:15 PM PDT, thousands of WLANs are very busy within RF range of one another, NOT interfering with each other thanks to some clever and longer PRSGs. All those WLANs can also synchronize with one another should they have to start from power-down condition.

Add to that the garage door openers which have a very short data burst on an RF carrier...add millions more in remote keyless entry automobile "watch fob" transmitters. Their pattern security is so good that they CAN and HAVE replaced mechanical counterparts in any environment. [yes, the auto fob transmitters have keys attached as a security in case the car battery goes kafooey...and for the mental/emotional security of the numbnuts conservatives who don't trust those new-fangled digital gizmos]

For pseudo-random number generation in theory, along with tests on things therein being random, there are 155 pages worth of good stuff in Donald E. Knuth's "The Art of Computer Programming," Chapter 3, Volume 2. I have the three-volume set and will entertain any offers of purchase (plus shipping costs)...provided I can trust the buyer (this group doesn't ensure my trust much...).

> Dictionary, Prentice-Hall 1989, it defines "cryptography" as
> "the art of writing or deciphering messages in code." Tsk, that
> would apply to morse codes, wouldn't it? :-)

indeed it does as has been pointed out to hands in this or other
threads to Hans

a point or 2 about Morse as it compares to PSK 31

When someone says PSK 31 they mean the modulation and the character set

much like Morse Code you have the modulation which is assumed to be
OOKed CW, but doesn't have to realy (we have MCW sounds of dit and dah
on FM voice, or maybe alsoused to ID anautoumatic SSB to for all I
know)and the letter set

One could send Morse by FSK keying makeing it sound more like RTTY than
anything any ham would reconize and Morse, but one always means int eh
ARS the very specail mode/letter set

Len:

10mhz?
My gawd man, I can walk that fast!

I stand behind what I said, no perfect random number generators exist, if you need a really good one--it can't be done with computer algorithms (but, the one doing our lottery is a really piss poor one--probably worse than your "no repeats for 913 year one @ 10mhz" even... <grin>

It most EXACTLY becomes a question of, "How good of a random number generator do you need?"

I grant you, most apps do not need that good of one, games of chance in reno/las vegas are ran off damn poor ones...

Also, if you read about egg at princeton.edu, you will see that computer random number generators are really a bad idea, the human mind can influence results... on some quantum-metaphysical level it seems the mind has powers which we have only guessed about in fairy tales... I leave that to your further research however...

Remember Len, we really do agree on most though... or, close enough...

John

I did not say that either

I said I could claim abuse if I liked, I did not in fact make any such
claim

You lied when you siad I could not claim abuse. I can certainly claim
abuse anytime I wish, any statement by you or anyone else is a lie

I count 4-6 replies (today) where you go on and on about your inabilty
to read my stuff,

then do yourself a kindness and don't try

If it is realy beyond your ken then don't bother. I'll not be offended
in the least

OTOH just becuase you ask me something doesn't mean I have to answer at
all or in the manner you choose

Your effort to try and "make" me are clearly abusive

an_old_friend:

Really, deep inside, I am a decent human being, or would like to think I am.

Your text has degraded here old friend, if you live alone, time to see a doctor
and get a check-up, you may have suffered a light stroke...

I am not being flippant about this, and all joking has been set aside, but I
really do get a sense something is wrong, and fear for your health...

You may ignore my advice if you choose, but I have a real concern...

If I had just sat here without mentioning this, and something undesirable would
happen to you, it would truly cause me great grief to know, so no need to flame
me back. I really have considered my own mental health in all this too...

Warmest regards,
John

> would apply to morse codes, wouldn't it? :-)

indeed it does as has been pointed out to hands in this or other threads to Hans

a point or 2 about Morse as it compares to PSK 31

When someone says PSK 31 they mean the modulation and the character set

much like Morse Code you have the modulation which is assumed to be OOKed CW, but doesn't have to realy (we have MCW sounds of dit and dah on FM voice, or maybe alsoused to ID anautoumatic SSB to for all I know)and the letter set

One could send Morse by FSK keying makeing it sound more like RTTY than anything any ham would reconize and Morse, but one always means int eh ARS the very specail mode/letter set

> privileges, they show that development by upgrading.

The problem is that such an implementation of the concept
contradicts the FCC's own arguments and reasons!

The only testing difference between a Tech and Tech Plus/Tech-with-HF
is that the latter passed Element 1 and the former did not. The latter
has some HF privileges and the former has none.

The FCC says that Element 1 is no longer necessary, and proposes
to remove it completely. If someone accepts that reasoning, it
follows that all Techs should have the same privileges - but that's not
what FCC proposes?!

The only explanation I can think of is that FCC is looking for
long-range simplification. Perhaps what FCC wants in the long
term is for all entry-level licensees to be on VHF/UHF only,
and require at least a General for HF.

That may sound farfetched, but consider that the number of Novices is
slowly dropping since that license class has been closed to new issues.
If Element 1 disappears, the number of code-tested Techs will have to
drop, too, as there won't be any more new ones. Eventually there won't
be any of Novices or code-tested Techs left - which means no more
entry-level licensees with HF privileges.

Of course it will take years for all of them to disappear, but
such a system doesn't cost FCC any admin resources.

> > But more telling would be how many Techs would
> > get Generals or Extras in order to get HF.

Nobody really knows what will happen. The VEs will rise to the
challenge, just they did in 2000.

Look again at the AH0A data from 2000, and from this week. Or compare
the numbers I post twice a month. Are the changes really that dramatic?

N2EY:

I think that is excellent, indeed, I think they should start at general with
HF.
Here is a link to all the correct answers for the general test:
http://blake.prohosting.com/mailguy2/generaltest.txt

If they simply can't memorize these correct answers, they have no business
being generals in arrl's army!

John

Hello, Len

Oh, come on! There are some folks you can trust. You can trust me!

Would you have a spare 10 or 20 grand you can loan me until payday?

When's payday? I dunno, you're the one that's working.

:)))

So long as the key is changed *before* any repeat of the pattern, no harm is done - at least I would suspect.

Just remember, one dot if by land and two dots if by sea .... or is that one dash?

Hey, care to loan me 50K?

73 from Rochester, NY

b.b.:

Fact is, soon as CW falls, the CB'ers will have their ham radios and will be able to take over these responsibilities. They are younger, won't seem such a burden, the hams really do need a rest... a long one... might be able to recover their sense of humor even, if well rested...

I have noticed that one post may be very readable and the next very difficult to decipher. I looked up Aphasia, and you are laboring under a very difficult disability. Thus please accept my apology for the comments I have made and it shant happen again. I applaud you for hanging in there, this can be a tough bunch.

Len:

Many computer studies have been done on those numbers stations attempting to correlate them with detectable events/changes/occurrences in the world--to deduce what they are about. Last time I really checked, some were claiming it had to do with banks, markets, money...

That is all wet?

Cross-posted to: alt.radio.scanner.flame_fest,rec.radio.amateur.misc,rec.radio.amateur.policy

Wogie had some minor surgery last week. Of course he won't tell you, but he did. The outpatient surgery was a success from what we have been told.

The doctor said that Roger's first question, after coming out of the anesthesia, was to ask if his sex life will be normal.

The doctor was a bit confused at first. He told Wogie that this was the first time a patient has asked him this after a simple tonsillectomy.

It'd be easier to deal with Mark if he didn't claim that 1) his earlier newsreader didn't have a spell checker 2) he can't be bothered to use the spellchecker in his current newsreader, 3) proofreading his material is just too much bother for the likes of us and 4) his mistakes are *our* problem, not his.

There is special equipment available to those with his handicap:
electronic spellers and dictionaries
word processors
talking calculators

It is evident that he does not choose to use them.

Finally, we have his past fabrications on his military service and why he needs to keep a low profile. Mark has sought victim status here on numerous occasions.

I agree 100%!

They found a way to give everyone some of what they wanted.
They listened to what the majority of those expressing an
opinion supported, and acted on it. They produced a set of
regulations designed to reconcile or at least minimize
polarization, rather than increase it.

What concepts, eh? ;-)

Perhaps we in the USA should suggest such a system to FCC....

I don't think he is, Brian - Jim was surprised when I mentioned that
the pass mark was only 60% a while back. This has been fixed now - it
has been raised to 70%, effective today!

But it does completely satisfy those who kept hammering on no automatic
upgrades and then some as I got the impression that most would not have
minded Techs being consolidated with Tech Plus at the Tech Plus privileges
even though otherwise against automatic upgrades.

> The only testing difference between a Tech and Tech Plus/Tech-with-HF

> and require at least a General for HF.
>

It is hard to say what the FCC was thinking. However perhaps they too are looking at the statistics and interpret it as no need for the introductory license to have HF privileges. Afterall the Novice are declining at a fast enough pace that it looks like almost none are active and that almost all are failing to renew. They can easily go into the data as they have it and see how many Tech Pluses actually upgraded, let themselves lapse, or simply renewed. The last indicating a low activity level and/or interest level since they have not upgraded.

Also, they may be thinking that this keeps the minimum number to tests to get onto HF at least at two. The Novices had to take two and Techs after April 2000 had to take two to get on HF. Prior to that, Techs had to take 3 tests to get on HF (Novice written, Tech written, and code).

They also discussed the concept that they do not want Techs to stay at the Tech level. They consider upgrading as a significant element in individuals fulfilling the basis and purpose of ham radio (i.e. self training, etc). Allowing the Technicians some HF privileges reduces the motivation to upgrade. And the FCC repeately referred to the Techs being able to get on HF by taking the simple written test to upgrade to General.

> That may sound farfetched, but consider that the number of Novices is
> slowly dropping since that license class has been closed to new issues.
> If Element 1 disappears, the number of code-tested Techs will have to
> drop, too, as there won't be any more new ones. Eventually there won't
> be any of Novices or code-tested Techs left - which means no more
> entry-level licensees with HF privileges.
>

As a VE and instructor, it's been my observation that not that many Techs bother to take the code until they are ready to upgrade to General. Of course this is limited to the sessions that I have participated in. However in the last 5 years, we've only tested a couple of Techs for code privileges. And those two were not taking it as an upgrade to Tech but at the same session with their Tech written. The rest were all trying for their General licenses (i.e. had their General written CSCE in hand or were trying for their General written at the same session).

> Of course it will take years for all of them to disappear, but
> such a system doesn't cost FCC any admin resources.
>

Maximum of ten years from the date of the R&O if they don't renew or upgrade. Potentially far longer if they do renew.

Yes they will. In reality, I don't expect that we will be swamped as the excuses will begin ("I don't have time to study right now", etc). We will get hit with a bump in the numbers but it won't be that bad. Afterall just look at the bump in 2000. There were something like 100,000+ Tech Pluses and the number of upgrades while higher for a few months wasn't all that large.

> Look again at the AH0A data from 2000, and from this week. Or compare
> the numbers I post twice a month. Are the changes really that dramatic?
>

Not really. Although as I mentioned earlier, I think under the new system, we will gradually drift towards a de facto two class system (General & Extra) at least among the hams who are actually active.

I believe so. I saw something on that very thing somewhere on the internet but can't remember where. Or alternatively, they can still take the Morse test.

My reality touches on things you never conceptualized of.
Markie...Mostly due to your poor English skills and inability to
assimilate the knowledge.

> > Yours is...well...it's something else...
>
> you would never know

I bet I know more than you think I do.

> You accept press realeases as gosple turth

Nope.

But I know what actually transpired in most of the recent ARES
mount-outs as opposed to what was "reported", and I ahve yet to find
any discrepancy between the two.

> that is stupid, and at best niave at worst willfully blind

Read the above, Markie.

Insisting others are "blind" when you can't even find the light
switch is assinine.

> > > > > You like none of it and so launch your personal attacks.

> the Extra Class licensees the way you do. You should be proud of
> yourselves.

I don't bring "discredit upon the Extra Class licensees", Brain.
If I bring any discredit, and I serious doubt it, it's just on me.

Just like YOUR lying and deceit does not bring "discredit" on Air
Force veterans or Amateur Radio General class licensee...

Just Brian P Burke, who happens to have been those things at one
time or another.

So what are you going to do to fix it?

Steve, K4YZ

Untrue, but then when has "truth" been your suit, Lennie?

> He has changed his boasting so many times that it is difficult
> to know what he has actually done or experienced.

I haven't been boasting.

On the otherhand this post I am replying to is over 300 lines
long.

> Snarly Stebie's version of "truth" is whatever he wants to
> claim on any particular day. He has NO references on any of
> it. Some examples:
>
> Stebie would challenge "call the VA and they can tell you"
> [all about Stebie's military record]

Untrue.

You at one time doubted my having served at all. The VA CAN
varify that information. You refused, of course...Lot's of
excuses...Nothing new there...

Big snip

> In the beginning of Stebie's tirades he mentioned a Medical
> Discharge that cut his marine career to 18 years (rather
> than a full 20). He then made that an "Honorable" instead
> of a medical discharge; if he had gotten that discharge some
> 5 years before (his alleged time was 1974 to 1992), why
> would he not have said "honorable" in the beginning? That's
> all archived, BTW.

Well...MOST of it is archived. You've taken some literary license
with what was said, but I am sure it's much more colorful in your mind
that way.

> Stebie claimed to have been in "seven hostile actions"
> during his military career, but it seems he is spinning
> that into the USMC being involved in those...while he was
> in it. He has no proof at all shown in here that HE was

> IN any of those hostile actions. That's in newer archives.

And we won't discuss any of them.

Just like you harrangue Dave Heil over his service in the State Department (all of it fact-based and verifyable), I shant give you the pleasure. You can go ahead and insist "it didn't happen" based upon my refusal to tell you the details, if you care to, but ti still doesn't make it any less factual.

> Stebie has claimed "working in military radio communications"
> but isn't at all familiar with the very common (quarter
> million R/T units made and operational) SINCGARS...(SNIP)

Lennie, I guess it's silly to point out to you that SINCGARS is NOT the end-all of radio communications in the Armed Forces.

Your 3000th telling of yet another SINCGARS story does not make it any more valuable than any other communications resource...Then, now or in the future.

Nore snip

> At best, Stebie's claims are only for an "Assistant" NCOIC
> position at a MARS station in Okinawa in the 1980s. MARS
> stations are NOT a regular part of any service branch radio
> communications...are, at best, a sort of special services
> like operation where they MIGHT be used for regular comms
> in case of catastrophic happenings to the Defense
> Communication System (DCS).

But...but...but...LENNIE!

YOU are the one who made the big deal about who runs MARS, etc etc even when it wasn't an issue!

> That's in very recent archives.
> Worse yet, it took months for Stebie to acknowledge that
> the Department of Defense directs MARS, even when given the
> link to the directive itself available on the Internet at
> the DoD website.

It was never in question.

Lennie is uttering a blatant falsehood every time he repeats this.

Lying IS Lennie's forte. This is why Lennie H doesn't get the respect and admiration he THINKS he deserves...

More Big Snip

> >a real whopper there Stevie
>
> True! Google archives have the proof in them, in thousands of
> personal-insult messages generated by Stebie...with only a few

> (perhaps a dozen at most) which are actual discussions devoid
> of personal attacks at somebody.

Nice try, Lennie.

Looking in the mirror again, obviously.

A survey of the posts of "Lenof21", "Lenover21", etc etc will show
precious few that don't "diss" "Rev Jimmie", "Katapult Kellie", "Der
Feldwebel", etc etc etc.

PRECIOUS few...

And the darned ironic thing is that I'm the one who usually jabs
Lennie, yet Lennie engages in all these "persoanl insult" diatribes at
almost everyone...

> >> The problem is you, Lennie, and just a few other ner-do-wells who
> >> seem to think that what you do is "constructive".
> >
> >yes we think it is constructive to look behind the curtain at the real
> >world
>
> That would disturb Stebie's fantasy. He wants the nicely-ordered
> military-style discipline he is no longer a part of...(SNIP)

Wrong.

> (UNSNIP)...one where
> everything is explained and laid-out, no room for deviation from
> the precise order of things. He can fit into that. However, if
> the environment changes, he gets very upset and angry. He can't
> handle disagreements with his opinions, tries to defend himself
> (no need in normal discussion not about a person) by issuing a
> series of personal insults directed at his perceived "accuser."

Even MORE ironic that I have never addressed you (or anyone) as
the "accuser"...that would be a LennieTerm. One that helps to
establish "victim status"

> There is, nor has there ever been, a SINGLE "correct" way of
> doing things in amateur radio.

There's been ONE constant in Amatuer Radio...

The license.

The one you don't have...The one you CAN'T get.

> Amateur radio is NOT a military...(SNIP)

Your reality is slipping again, Lennie...

You really stretch to make these up, don't you..?!?!

Or is it just an excuse to tell Mrs Lennie "Just one more minute Dear...", hoping she'll fall asleep before you have to go "do your duty".

> But, the old rank-status-privilege class consciousness of the
> old six-class license system suits the ordered, disciplined
> military psyche.

You keep mentioning "military psyche" along with your 1950's-era radio stories, Lennie...

It doesn't take an LMHSW to figure you out...

More big snip.

> Radio is radio.

No, it's not. Not in the APPLICATION.

This forum is about AMATEUR RADIO...Not Army, or PLMRS, or GMRS, etc etc etc.

Big snip.

> One MUST look at what other radio services are doing. Firstly,
> amateurs must co-exist in the EM spectrum with all other radio
> services.

We must co-exist in that we do not cause any disruption of service to OTHER radio services. What goes on inside those band edges is a whole different story.

> Secondly, other radio services, having (usually)
> more flexibility in mode type use, can offer insight into
> possible new methods of communications.

But...but...but...LENNIE!

YOU are the one who keeps yelling "IT'S JUST A HOBBY!"

Where does the FUN of operating radios that are software defined and require almost NO human interaction to make work go...?!?!

> Thirdly, closing off
> minds to what happens elsewhere and claiming it is "for the
> good of amateur radio" is a simple cop-out, an excuse NOT to
> learn, investigate, to enquire about new things, new
> possibilities; it's a rationale for being LAZY.

Lennie...YOU keep repeating that threadbare and untruthful rant over and over, and it's no more true today than when you first sprout it.

> LenDidIbaffleThemWithEnoughBSthisTimeAnderson@ieee.org

Simple, John.

Hide in plain sight. Make it look like a duck, sound like a duck
and quack like a duck, everyone thinks it's just another duck.

Just like 20 middle eastern guys did at flight schools around the
United States a few years back and then perpetrated one of the most
heinous acts of terrorism the world had ever seen.

Just my 0.02....

Most of the CB'ers that I see are showing the same phenomenon as amateur
radio, i.e. an aging population. This seems to be striking every activity
as far as I can see.

Doesn't matter, Dave.

That was all eight of Markie's lies and allegations. Seems it's
going to take a bigger hammer to get his attention this time.

Like I said above...I wonder if Markie would allow himself or a
loved one to undergo surgery if the Surgeon's written orders were
written like Markie writes...

Not in most cases.

As I read it, you are authorized HF access as of today, without further testing, if...

1) ...you got your Basic certificate >>before<< April 2, 2002.
2) ...if you got your Basic certificate >>after<< April 2, 2002 AND at a score of 80% or higher.
3) ...if you got your Basic certificate >>after<< April 2, 2002 at a score lower than 80% AND pass a 5WPM Morse exam

Perhaps Leo can confirm (or correct) my understanding.

If you have the advanced license, that also gives you HF privileges with this
new change.

The retaking the test is only if someone didn't receive the 80% pass mark but
want HF and fits none of the above four possibilities.

The RAC bulletin reads like only if you were licensed before April 2, 2002
that you automatically get HF privileges. But on reading the Canadian
Gazette entry on this,
http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/sf08435e.html
it seems less clearcut.

They start off with the bit about before April 2, 2002:
(2) Amateurs certified prior to April 2, 2002 will be allowed to
operate in the HF bands below 30 MHz based on the experience and
knowledge they have acquired over this period of time.

But then further down:
Amateurs holding a Basic Certificate who have been certified for at
least three years will automatically receive authority to operate in
the HF bands. This is based on the rationale that three years of
experience will have allowed the amateur to acquire sufficient
experience to operate proficiently in the HF bands. Amateurs who
received their Basic Certificate within the three year interval prior
to the date of the new standards will be required to prove that they
had attained a mark of at least 80%.

Those two paragraphs don't fully mesh. The first is a hardcoding of a date, but the second suggests that all one needs is a 3 year waiting period. I'm not sure which takes control.

I agree 100%!

They found a way to give everyone some of what they wanted. They listened to what the majority of those expressing an opinion supported, and acted on it. They produced a set of regulations designed to reconcile or at least minimize polarization, rather than increase it.

What concepts, eh? ;-)

Perhaps we in the USA should suggest such a system to FCC....

Dr. Pepper:

Ham license? Well, that makes one a glorified CB'er now doesn't it?

I realize you think a ham ticket is some great accomplishment, something with signifies that individual has some mental acuity or powers above mere mortals.

All that is, is a damn hobby license, get a clue.

If you expect a ham license to demand some type of respect for its' possessor--you are sorely mistaken. Some complete ignorant jerks possess these things. Get a MS or doctorate in a science of math field, that is what you really need...

That is all I was pointing out, and the fact you don't seem to have a clue to those facts...

Dee:

It is obvious, the FCC has chosen the "Time Solution."

Now people can grab their licenses with no problems from CW. Time passes, the problem cures itself when all protesters have gone SK, and the real final changes can be instituted.

It is probably the best decision given the religious zealots surrounding CW.

I have gone through 60 pages of titles of your posts and not found
them, You truely don'tseem to realize the amount of shit you spew out

in RRAP making very hard to find something esp when you don't provide
enough info to know what one is looking for

but the translation of your word is that you are too lazy to do so, or
the "acheivements" are so small that you are emabrrashed to restate
them

>

I am sure your "reality" touchs things I no concept of, and mostly
things that totaly the product of your twisted mind too

> Markie...Mostly due to your poor English skills and inability to
> assimilate the knowledge.

Not at all

I just prefer a better grade of SciFI

>
> > > Yours is...well...it's something else...
> >

> Nope.

yes you rarely discuss anything to do radio amateur or otherwise.

such post comprise less than 5% of your posting of the last few days,
and those post are small in size compared your volume of personal
attacks

>
> > > The problem is you, Lennie, and just a few other ner-do-wells who

flailing Character Steve, gee you are the one that goes flaiing al the
time

if you meant failing well i suppose that Brain and Myself don't care
how you define character, indeed if you were an example of good
character it says much fr the merits of being evil

>

>I certainly, however, disagree with a lot of his philosophy.

In the CONTEXT of the subject, "personal dislike" in newsgroups
is to be expected...ACTING on such personal dislike in a puerile
juvenile middle-school manner instead of the subject matter is
an indication that the responder has no valid argument on the
SUBJECT.

As a manager, you should be aware that personal preferences in
personalities have NO validity for business purposes. Yes,
there should be a balance there in order to preserve a working
crew, to avoid an evacuation en masse (I've seen it happen) due
to overbearing management techniques. The purpose of business
is business. Similarly, discussion of regulations affecting
the ENTIRETY of citizens under an administration, should be
conducted in a venue concentrating on the SUBJECTS, not the
present form of juvenile very-personal insults and cat-calls
by those whose only interest is very, very personal desires.

Those looking for "hail fellow well met" type of ambience should
go straight to the nearest lodge hall and hang out. There
WILL ALWAYS be disagreement on subjects. Amateur radio is not
a military unit of national service, not a union, not a guild,
not a craft of professionals. It isn't even a fraternal order
of the local variety. There is NO "requirement" except in the
minds of too many that "all must think/do/perform in the SAME
manner" or be forever consigned to some mythical hell.

There IS a great variety in amateur radio, a personal recreation
spread over the entire country, not just at some imaginary
local lodge hall. The "rank" and "status" and "privilege"
put on various classes of federal license is largely an
artificiality applied by previous humans into codified law.

>Same applies to you. My guess, from what I see here, is that you're a humorous
>guy, good conversationalist, and that we'd find much in common.

TOTALLY IRRELEVANT for the purposes of discussing anything in regards to federal regulations affecting ALL citizens, interested or not interested in taking up licensed amateur radio. As I just said, if you NEED a local lodge hall environment, go there and feel more comfortable with like-minded individuals. All can think in the same line of thought, feel secure in the company of "peers."

Evidenciary in here is that MOST of the posters NEED this commonality, indeed thrive on it. Those who do not agree with such common, like-minded thinking, are treated with the basest sort of outright BIGOTRY not confined solely to race.

I really don't care one bit what YOU personally like or dislike. Matters not to the SUBJECT which can affect each and every citizen of the USA who might be interested in amateur radio...regulations that would apply to ALL and not the self-propelled few who insist in ham radio built in THEIR image.

> But having
>never met you, I can't pretend a "personal like" or a "personal dislike" for
>you. I certainly, however, disagree with much of the philosophy you express
>here.

That is, again, totally irrelevant to the SUBJECT of federal regulations which involve the totality of ALL citizens in regards to radio matters. This venue is NOT a popularity contest, of personalities who see themselves as "leaders" (yet it is obvious that this is what they seek in here). Those who have a NEED to control others, to be "leaders," can find sustenance in local fraternal orders by running for office THERE. In HERE it is a discussion on ISSUES of amateur radio policy...or that was the intention however else its inhabitants have failed in carrying out the purpose.

On "philosophy" (of some imaginary grouping), that is a very presonal inside-the-head construct, a complex matter that is very NOT shared by all others except in gross generalities.

As I've often remarked, electrons fields and waves do NOT obey any human desires, wishes, or fantasies. Those very electrons, fields, and waves are the HEART of the entirety of radio, the things that make it work. Magic and fantsay do nothing in technology that obeys only physical laws. That some HUMANS have codified laws in a certain manner does NOT mean that such human laws affect the physical laws. Radio itself does not work on the emotional state of federally-authorized licensed (certificate suitable for framing) radio operators.

Someone once wrote in here "gentlemen can disagree without being disagreeable." Wonder who that was?

bit bit

Len:

In this new "feels good generation" I suppose you are supposed to disguise all dislikes and keep them a "state secret."

Frankly, I hail from a time when you were tested and knew your worth, from then on you went about your business, independent of others expectations or demands.

Back then, it was considered poor form to not allow others their personal opinions, beliefs and prejudices.

Since I made it though that time, I accepted that NOT all others could be expected to "like" me, indeed, I have never found the occasion where another mans' opinion either "makes me" or "breaks me." And, tools have been provided to me by my creator (whether that creator hailed from a mud puddle or exists as a GOD) and placed between my ears to allow me to realize all of this.

Now it seems, others expect to control the opinion one forms of them--the future will see if they are successful or not... I think NOT!

and worse yet as Long as I remember a something I have written I see
what I intended, not what is there, my mind and memory. gnag up trying
to be helpful but jst making things worse, and as you have noticed the
degree varies constantly, but esp on other aspects of my health, or if
I get angery, and so the medical pro Steve who claims to know about
these condictions does his best to provoke and make me angery so he can
continue to make fun of me

2856. We can end it all right here

Rather than continue to waste perfectly good electrons on non-terminating loops about "you're a liar --- no YOU're a liar" and similar topics, we can end it all with a single thread.

Simply respond to this message by selecting the numbers which reflect your personal philosphy, write them down on a notepad, add them up, and report ONLY THE SUM here. We'll all then have a clear understanding of your position on these matters, and can move on to other productive discussions regarding Amateur Radio Policy.

1. Len Anderson is a hero to the downtrodden.
2. Len Anderson is a liar and a putz.
3. K4YZ is a war hero and radio whiz.
4. K4YZ is a lowlife disability cheat.
5. K8MN is the best DXer since Danny Weil
6. K8MN is a sneak who lures unsuspecting French hams into out-of-band QSO's
7. K0HB is a war hero and radio whiz.
8. K0HB is a stalker and harrasser.
9. N9OLG is a highly educated philosopher
10. N9OLG is a sponge
11. John Smith is
12. John Smith isn't
13. N0IMD is a war hero and rare DX
14. N0IMD is a liar and discredits the Burke family name
15. KB9RQZ is a Major in the Chemical Corps and a war hero
16. KB9RQZ is K4YZ in disguise
17. AA2QA is a war hero and a radio whiz
18. AA2QA was barred from the Duva Den for excess consumption
19. W4NTI is a war hero and radio whiz
20. W4NTI is a redneck
21. Leo is a hero of the Great White North
22. Leo is a hoser
23. N8UZE is a superb contester and a fox
24. N8UZE is a W5TIT wannabe
25. W5TIT is a great IT person and a fox
26. Kim has an unrepeatable call sign
27. N2EY is a QRP hero and a radio wheeze
28. N2EY is a secret member of NCI
29. K2UNK is a hero of NCI
30. K2UNK is a secret member of FISTS
31. K2ASP is an FCC hero and a radio whiz
32. K2ASP once gave N0IMD a pink ticket for sending sloppy code
33. KB3EIA is a balloon launcher and radio whiz
34. KB3EIA is full of helium
35. K3LT should come back to rrap.

36. Hey, Larry, don't let the doorknob hit you in the ass on your way out.
37. _____ is a _____ and a radio whiz.
38. _____ is a _____ and a bottom dwelling scum sucker.

Remember, respond with ONLY the sum of the item numbers of your selections.

73, de Hans, K0HB

KXHB:

I am having a problem with your test, it does not give true multiple choices and there is no element 1 to stroke my ego!

While I commend you in the brilliant thinking which now takes us in this new direction--the test is simply unacceptable.

You will need to present this test to the board and get comments from the community...

John

KXHB:

On these questions:
11. John Smith is
12. John Smith isn't

... for number 11, he ain't! (and, I got the tea leaves to prove it! Well, I ran out of tea leaves--I am taking it for granted these marijuana leaves work just as well, if inhaled first.)

... for number 12, he isn't! (and, Sylvia Browne agrees with me!

(Just in case you think I am mistaken (or lying), you can consult with her directly at:
http://www.sylvia.org/home/index.cfm
)

But hell, what do I know--a dumb guy who hangs with freebanding CHICKEN BANDERS (yuck!)....
<completely-blank-expression>

P.S.
I love this idea and little test of yours! Up until this point, I was debating just how extensive was/is your sense of humor? I now stand aware and in awe... just wish I'd have though of it!

Warmest regards,
John

Duhhhhh... :-)

Yup, them evil, nasty, wicked CBers are aging very rapidly,
just like all those no-code-test Technicians are "rapidly
NOT renewing" their ham licenses after 2003 and their
numbers are "shrinking at an alarming rate." Uh huh. :-)

Excess testosterone, for sure. Inability to socialize with
others, concentration solely on himself, downsized from the
murines, personal family tragedies, early divorce, that's
quite a list of "reasons." Gonad the Librarian is a good
moniker for him.

>> And this posting I make will just inflame him more...tsk, tsk.
>>

>Len:
>
>10mhz?
>My gawd man, I can walk that fast!

Heh heh heh...we'll just put you down on a bench with a good
scope, warm up the soldering iron, hand you a bunch of DIPs
and see if all your gate delays will allow you to get all of
the sequence states in order... :-)

Reset the time to about 1976 with conventional TTL DIPs, well
before the "HC" CMOS zilch-gate-delay technology was developed.
It was also well before the GIGAHertz-clock PCs appeared. At
best the PC clocks were struggling to keep up at 10 MHz (at
least the affordable ones) and microprocessors running at that
clock rate were "inconceivable."

>I stand behind what I said, no perfect random number generators exist, if you
>need a really good one--it can't be done with computer algorithms (but, the one
>doing our lottery is a really piss poor one--probably worse than your "no
>repeats for 913 year one @ 10mhz" even... <grin>

John, that's why they call it a PSEUDO-random sequence generator.
PSEUDO, "close enough" but not exact.

I gave up playing any Lotto years ago. I won all of $55 and
spent at least three times that in order to "win" that. It
was a cheap thrill while it lasted. :-)

Just because YOU didn't win anything is not a reason to be
accusatory. :-)

>It most EXACTLY becomes a question of, "How good of a random number generator
>do you need?"

Depends on the application. If you want to scramble (encrypt)
voice/data/video/whatever, you want one to SYNCHRONIZE the
unscrambler (decrypt) to enable restoration to the original.
That's where the PSEUDO-random thing comes in.

PRSGs are invaluable in certain kinds of measurements that
require "noise" added...and then that "noise" subtracted in
order to "see" whatever non-random stuff is there. One of
those is building stability (especially for robustness
during earthquakes). H-P Test and Measurement Div (Agilent)

had a good series of AppNotes on that with a high-power
shaker (low-power compared to quakes) "modulated" with a
PRSG and the sync off of the PRSG used to subtract the
deliberate shaking from vibration sensors in order to gain
the resonant modes of the building. Another series of App
Notes described a similar method to extract resonances in
electronic circuits, even do a pseuod-reconstruct of frequency
response. That was three decades ago.

If you get into any metrology at all, you WILL find that this
"artificial noise" is an accepted practice in many physical
analyses from mechanics of structures to electronics. It just
CANNOT be done any other way except by PSUEDO-random
techniques.

>I grant you, most apps do not need that good of one, games of chance in
>reno/las vegas are ran off damn poor ones...

Tsk. Sounds like you've been to Vegas and haven't won much?

:-)

No problem to me. Wife and I will be in Vegas along about
the beginning of October and try a few of those games...
along with the other R&R available.

We use electronic banking methods a lot now for personal
finances. Quick, easy, and COMFORTABLY SECURE coding that
we can depend on. Nobody has hacked our bank accounts
yet. The worst we can expect is some doofus courier
"losing" a back-up tape during physical transport.

>Also, if you read about egg at princeton.edu, you will see that computer random
>number generators are really a bad idea, the human mind can influence
>results... on some quantum-metaphysical level it seems the mind has powers
>which we have only guessed about in fairy tales... I leave that to your
>further research however...

Yah, yah, yah. You are beginning to sound like a "small medium
at large," John. Or, you read the same series of science-
fiction stories in old ANALOG magazines as I did! :-)

"Egg?" Edgerton, Germehausen, and Grier, the company?
"The Cuckoo's Egg" by an astronomer-turned-hacker-catcher?
[that's a BOOK if anyone else is looking in and wondering
what the fork we are talking about...]

In THIS newsgrope we've got "state-of-the-art" radio amateurs
who insist and insist and insist that morse code comms are
WAY, WAY faster than any (hack, ptui) TTY and MUCH, MUCH
better (and "easier") than sending text messages over a cell
phone! Just ask them and they will issue Pronouncements to
that effect! [and they HAVE] Their spiritual metaphysics

will defeat ordinary physical laws three ways from Sunday!

>Remember Len, we really do agree on most though... or, close enough...

Not really...but, carry on, auld chap... :-)

>chant a little rap with it too!

Sounds good! Message Drums were in use long before morse and
telegraphy...very TRADITIONAL. The first use of "comm nets"
with "message relays" too!

Problem is, USA ham radio is basically done by WHITE MALES so
it wouldn't go over big. Dunno about Canadian demographics
but British Columbia is largely white...

>Some testing in the care maintenance of carrier pigeons might be in order to,
>for the guys who wanted real DX!

Har! The United States Army Signal Corps actually had a
Carrier Pigeon Service...trainers, handlers, mobile coops,
the whole magilla. Came into being before WW 1 but was
disbanded afterwards. Sounded like a good idea at the time,
faster than a land courier, minimal handling, no electricity
needed (bird poop is safer than RF burns). That time might
have been the start of the phrase "eat the bird," though.
Anyone on WW 1 field rations might look at pigeons with a
hungry eye. "DX" wasn't so hot and "propagation" effects
weren't good using "pigeon code."

I like the Message Drum idea, though! Sounds like a plan...

That's in regard to the FCC regulations on permissible codings.
IF A CODING HAS BEEN PUBLISHED (and supposedly well-enough
known) then it is okay to use by radio amateurs. That ties
into the basic warning of amateur radio communications shall
not be intended to obscure the true meaning (as with 'secret'
codes).

>>
>> Too many have the emotional labeling of "cryptology" in regards

>
>indeed it does as has been pointed out to hands in this or other
>threads to Hans

I'm of the understanding that Hans DOES understand it, but is trying some wordplay. "Cryptic" as in "cryptology" or "cryptography" carries with it some emotional baggage for many in being related to espionage activities. "Morse code" of course is absolutely not (in more emotional baggage of morsemen) any "code" of any kind...ahem...yet morse code is IS a CODE of aperiodic on-off states representing the English alphabet, numerals, and some punctuation marks.

That morse code is an "international language" is more nonsense by morsemen. The CCITT and later ITU-R simply STANDARDIZED the "International Morse Code" as being the standard for radio amateurs. Has NO relation to a "language" other than being a representation of the English language characters.

>a point or 2 about Morse as it compares to PSK 31
>
>When someone says PSK 31 they mean the modulation and the character set
>much like Morse Code you have the modulation which is assumed to be
>OOKed CW, but doesn't have to realy (we have MCW sounds of dit and dah
>on FM voice, or maybe alsoused to ID anautoumatic SSB to for all I
>know)and the letter set

Peter Martinez' innovation (he is G3PLX) uses PHASE modulation which can be picked up with an FM demodulator. Peter goes one step further in the character coding...that of - in effect - altering the modulation spectrum by the CHOICE of bits and bit lengths. [there's a very long explanation of the effect on spectral content which can't be done in here without some pictures or whiteboard sketching]

Phase modulation has some definite advantages insofar as very low received signal levels are concerned. [again, that gets to a complex explanation involving some statistics knowledge] It CAN actually work BETTER than on-off-keyed CW at very low signal levels, aided by only a simple hardware expansion of the detector system in a receiver. Conservative traditionalist radio amateurs are horrified at such upstart ideas (only four decades or so old) and will have NONE of that!

As long as a message/communications is being sent, the transmitter MUST be on for PM or FM. The carrier is always present. Again, the conservative traditionalists argue that this is "inefficient" and other ill-informed horse pucky, not counting on the added electronic stress on the power supply or final amplifier or the resulting shock to the primary power source. [I've seen some truly marvelous rationalizations on that, little more than nonsensical imaginings of those that haven't learned enough of FM and PM]

>One could send Morse by FSK keying makeing it sound more like RTTY than
>anything any ham would reconize and Morse, but one always means int eh
>ARS the very specail mode/letter set

FSK and PSK "sound" almost identical. Their modulation
spectra are VERY close, almost exact if only magnitude of
the spectral components are considered (the difference is
in the phase of their sidebands relative to the carrier
phase and modulation phase). With a binary (two-state)
modulation signal, PSK is a tiny bit easier to implement
on a transmitter than FSK.

But, on regulatory matters, the FCC is quite firm on the
"public knowledge" aspect of ANY coding. For OOK CW, they
reference the CCITT/ITU-T standard on commercial telegraphy
as the International Morse Code. For RTTY they reference
the 5-level so-called Baudot code and the 7-level-plus-
parity ASCII code. PSK31 was allowed for use (followed
up by specific communications from the FCC) when it was new
due to extensive publication in Europe for years before
it was published in QST.

On Spread Spectrum techniques, there's still a gray area in
the regulations. FCC regulations have allowed a greater
range in the pseudo-random sequences for direct-sequence
spreading (than the original regs) but they still require
some form of "recording" of EVERY transmission for "later"
use! [that's the interpretation of that very general
regulation on SS] On the other hand, there's a difficulty
in obtaining the EXACT nature of just about EVERY commercial
SS sequence in commercial use...from keyless auto entry
fob transmitters to garage door openers to LANs and WLANs*
to remote electrical meter useage transmitters. Millions
of commercial SS sequences being sent but there are NO
regulatios imposed on THEIR transmission recordings!

* I'm classifying all those "cordless" devices from 'phones
to remote TV monitors to home networking gadgets in the WLAN
category...that's a few million or so more devices.

Len:

I thought you would look, the "egg project" is a series of pseudo-random number generators, deployed worldwide... they can be used to predict major catastrophes, and such, they work... no scientist in his right mind would deny it... some psychic-ether bond exists to the human mind which is yet undiscovered, yet its existence can be demonstrated--undoubtedly, the future has much in store for "new technology" centered around this "law", I suspect the CIA is already investigating its uses in espionage, maybe even some of the "amateur spies here!"

You may even be forced to stop laughing at Sylvia Browne in the future!

Me, I just rely on my tea leaves! (marijuana leaves actually, you inhale them first--then read the ashes! I deduced it from other hams, they obviously know this trick!) <innocent-look>

2878. Re: PGP encryption of data on amateur radio?

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-30 21:47:16 UTC
From: John Smith <assemblywizard@gmail.com>
Message-ID: <ZzSGe.266$tC.9522316@news.sisna.com>
Source record: 114186

Len:

So then, you have decided that free speech is only allowed if the government can understand it (decrypt it.)

Interesting, my idea of free speech is that they (my public servants--from bush on down) don't have anything to say about what I say, nor who I say it to, nor need to be aware of the contents of my messages (unless they find me yelling "fire" in a crowded theatre)... however, I am an american citizen... now if they want to hassle some other individual in another country, I guess they can, depending if they get a pencil shoved in their ear or not, I suppose...

Not only that, but the constitution of my forefathers demands I keep an eye on my "public servants", maintaining a constant vigil, and if they even look like they are attempting to limit and/or subvert the liberties and freedoms of the citizens here, I am demanded to use whatever means necessary to halt and prevent them, it is how I repay those individuals who gave their lives to win my freedoms and liberties--that is a REAL "GENTLEMAN's AGREEMENT!"...

... now I would be a damn fool to tell them what I would have planned in such an necessity, wouldn't I?

Sometimes, I think we have already lost a battle, at this point, and a foreign influence is in some kind of control of this country...

... perhaps the time approaches to repay that debt, much quicker than I would like ...

When a government begins to fear its' very own citizens--the problem is NEVER the citizens...

Len:

My gawd man, my eyes just watered up on me...

Your words reminded me of country western song I enjoy:
"Oak Ridge Boys -- All the Gold in California"

... the lyrics go, "try'in to be a hero, windin' up a zero..."

Story of my life there! You know that tune?

If not, grab a copy of "Winmx" (free download, they guarantee NO spyware -
http://www.winmx.com/) and use it, you can get any song you can imagine in
.mp3 format (windows media player can play 'em for ya) and listen to it...
everything you need to know about calif, like when the lyrics go:
"... all the gold in California is in the middle of a bank in Beverly Hills in
somebody else's name..."

Warmest regards,
John

Then your 'docs' are as big of idiots as you.

Refer to standards for scriptwriting per the AMA and JCAHO.

Jim wasn't being difficult, just responding to an 'inside' comment.

About 40 years ago Jim and I worked together on Guam ("Duva" in the local Chamorran lingo). "Duva Den" was the enlisted watering hole at the Naval Communications Station. Consumption at happy hour (10-cents-a-can "Lucky Lager", laced with formeldahyde for preservation during ocean shipment) tended to be liberal.

You can admire a photo of the "Duva Den" at
http://www.anzwers.org/free/navyscpo4/guam_frank_lynch_2.html

Hello, Hans

Did you forget that they introduced Old Milwaukee beer - a 16 oz can for a *nickle*! You could be almost flat broke; all you needed was a quarter. I got sloshed there a few times. Almost got in one guys face until I noticed the stripes he had on ..... I shut my yap just in time ;)

Hello again, Hans

CT3 .... hmmmm ... I wonder if he was one of the guys I irritated when I found out they monitored the shack and had a half-hour chat in American Land Line Morse. I did that just for the CTs benefit. Only time in my life I used Land-Line Morse. I got thinking about someone playing a tape for hours figuring out what we said. The tears were streaming down my face. LOL, they took the beer cooler out of the shack after that stunt ;)

Perhaps.

Or perhaps FCC thinks that anybody who really wants HF should just go
for General or Extra.

> > The only testing difference between a Tech and Tech Plus/Tech-> > with-HF

The number of upgrades isn't easily obtained from the database, though.

True enough!

And when you consider that the old, pre-restructuring 20 wpm *Extra*
was earned by at least one third-grader at the age of 8,
it's a bit hard to accept that the written tests are "too hard".

(OTOH, the same can be said about the code tests...)
>

It gets more and more interesting. Sounds like a rebirth of
Incentive Licensing.

Think about it: FCC saying that it's *not OK* to stay a Tech!?!
That upgrading is part of being a good ham and supporting the
Basis and Purpose...

> > That may sound farfetched, but consider that the number of

> trying for their General written at the same session).

Which all makes sense.

On top of that, since 1991 I have known many hams who bypassed
Novice and went to Tech with the reasoning that they could
then upgrade one step at a time, rather than having to prepare
for two tests at the same time.

> > Of course it will take years for all of them to disappear, but

Yup. In less than 5 years there will be no more Tech Pluses in
the database even if the rules don't change.

> and the number of upgrades while higher for a few months wasn't > all that large.

And a lot of them were paper-only upgrades.

Another factor: if the rules do change, we will probably see a surge of
VE action as soon as the changes are announced. This
surge will be driven by two forces, as was the pre-April-2000
surge:

1) - Hams getting licenses *before* the rules change so they can
say they did

2) - Hams getting CSCEs ahead of time so that they can upgrade under
the new rules on the day the rules change. Back in April 2000, there
were several no-test VE sessions set up to handle the
CSCE surge...
>
> > Look again at the AH0A data from 2000, and from this week. Or > > compare
> > the numbers I post twice a month. Are the changes really that > > dramatic?
> >
>
> Not really. Although as I mentioned earlier, I think under the > new system,
> we will gradually drift towards a de facto two class system
> (General &
> Extra) at least among the hams who are actually active.

I disagree somewhat. Two observations:

1) Notice how slowly the Advanced is declining. 5 years and 3 months
since it was closed to new issues, and yet the number
of Advanceds is about 75% of what it was then. This is despite
the attrition to expirations and the written-test-only upgrade to
Extra.

2) The number of Generals surged after 2000, but is not growing
anymore. General has become a intermediate step on the way to Extra.

What we're heading for may be more of a 4 class system -
Tech/General/Advanced/Extra.

If we do get a de facto 2 class system, it will probably
be more like Tech/Extra rather than General/Extra.

In light of the likelyhood that all US Amateur Radio testing may soon become code-free, this 16-year-old article from WA6ITF has new applicability.

GEARVAKf Research Basis of No-Code Tape

Turlock, California-- April 32, 1989 - In a surprise announcement that has completely rocked the foundation of the educational community, the Wet-Link C.B. Radio Network has prematurely introduced a new "No-Code CW Training Tape Cassette' which was developed using lack of research material supplied by the world famous Gorbinsky Learning and Forgetting Center of Ohio.

This GEARVAKf-sponsored facility is the hub of the GEARVAKf-funded research into "things."

In a 1955 report authored two decades before the center was opened, it'sformer Director of Research Into Things, Dr. R. U. Kidding, PhD. (phud), posed the question: "Why is the sky blue and what does this have to do with learning morse code?"

Using grant monies provided by the GEARVAKf Grant Monies Institute to Research Things, Dr. Kidding attempted to contact the late Samuel F.B. Morse to ascertain the answer. By 1966, Dr. Kidding had discovered that Morse had been dead for several decades and therefore was not a plausable source for garnering his information.

While Dr. Kidding never did learn why the sky is blue, his 1979 paper titled "To Code or Not to Code--Is That a Question?" went unnoticed by the communications community for almost two decades, mainly because it as written in a VIC-20 computer, printed in 23-letter columns, and looked like a grocery list. The paper was resurrected about four days ago by the production staff at Wet-Link C.B. Radio as an excuse to put out a useless tape cassette to teach people No-Code at 0 WPM. Hosted by Niles East, the cassette is designed to instruct the listener and impart enough knowledge so that he or she can pass the Morse Code portion of the FCC No-Code ham radio exam.

Since nobody in their right or left mind would buy such trash, the only way to get one is at the WESTLINK REPORT/220 NOTES booth at the 1989 Amateur RadioVention in Dayton, Ohio. The tapes are almost for free, but not quite. GEARVAKf members are advised to show their lack of ID cards while non-members need not.

"...cappable...?

What do I care that the Doctor wears headgear or not?

And no, "idiots' means idiots. If they WANT to place themselves
in potential jeopardy for mis-scripted medications, then they can go
ahead and write like you do.

> > Refer to standards for scriptwriting per the AMA and JCAHO.
>
> why I can just check the copies the I keep of the written ones, I am
> never quite sure what the med is and I am amazed that I get the right
> ones

Two comments:

First, if your doctor's writing can't be read, s/he's incompetent,
regardless of how nice a guy/gal they are. Not to mention they are
opening thenselves up to a hu-mongous law suit.

Secondly, if YOU don't take the time to sit down with your doctor
and go over those medications to understand what each one is, it's
benefits, expected outcomes, potential side effects and possible
alternatives to their use, then you're the idiot I have always claimed
you are.

> and you should know that Doc are notorious for poor handwriting

Maybe YOUR docs are...The one's I work with are a bit more
professional than that, Markie.

Quod erat demonstrandum...Latin for "it is as demonstrated."

Stebie has to begin by snarling and hurling epithets. :-)

>> > He has changed his boasting so many times that it is difficult
>> > to know what he has actually done or experienced.
>>
>> I haven't been boasting.
>
>sure have been boasting about your achivements sayning they are better
>than Lenn without of course saying what they are

[just one N in the short form of my given name...:-)]

Stebie has been "IN" those now-famous "seven hostile actions."

Actually, he has been IN military service WHILE those occurred.
He has NO presentable proof that he was "IN" those ("in" as
being a participant in). That's a good "little white lie"
kind of boast, but a BOAST nonetheless.

He has BOASTED of his physical prowess in civilian life (flying
general aviation aircraft, flying hang-gliders, roller-blading,
marching with heavy pack, etc.) while supposedly pulling in
medical pension from an early release from service, that
supposedly due to an "accident." [accident unspecified] Now,
it stands to reason that if one can do all those things as
a civilian, he is quite physically capable of completing his
"20" (years)...or he is DEFRAUDING the United States
government. Granted, the medical examination for a private
pilot license is minimal, but a job as a nurse (licensed
practical version) requires physical ability to move patients
whether in a ward or in the "ER."

>> On the otherhand this post I am replying to is over 300 lines
>> long.
>
>So? Now you are trying to ditate how people may express themselves

Stebie's whole point in BEING here seems to be his need to
SUBJUGATE OTHERS. He LIKES pushing people around plus
"having fun" denigrating anyone he feels is "too weak" to
reply or has some kind of disadvantage. He wants to make a
"name" for himself. In that, he has, but the kind of name
he's gotten isn't a good one...:-)

Subjugation is a common technique of non-commissioned officers.
While that works in recruit depots, it is ten kinds of no-no
when used in social or semi-social groups.

>But they can't verify a claim that you will make spefic enough to even
>ask about

Poor Stebie did a bit of BLUFFING with that "call the VA" claim.
One just cannot get such information unless one is in a position
such as the personnel or security department of a business. Even
so, the information is minimal. There's a couple of public laws
on that subject for the armchair lawyers but it is of no matter.

One CAN download a standard form from NARA's St. Louis website
and send it in by mail. That's still no guarantee that any
information WILL be returned nor the extent of that information.
At best, one MIGHT get a copy of a DD214 (release from active duty)
or other one-page document provided one can supply a social
security number, both the requestor's and the person's SSN being
queried. In my case, it would be BOTH my ASN and my SSN before
they would release anything. [the changeover from service
branch specific serial numbers to social security numbers for
all branch members began in the 1960s]

>and you admit to this or not?

Stebie NEVER admits to anything he is challenged on. :-)

What I've written is FROM his own postings in here. Whether or
not Google got ALL the archives from DejaNews since 1998 is
unknown. It is beside the point, really, one can't spend the
whole of one's computer-modem activity re-arguing and re-re-
arguing old, old arguments which some sore loser (Stebie) failed
to win.

Stebie NEVER DOES ANYTHING WRONG in here. :-)

>> > Stebie claimed to have been in "seven hostile actions"

>>
>> And we won't discuss any of them.
>
>then they are claims without proof, or BYS Stevie lies

Stebie is just doing his BLUFFING thing as I remarked on.

It works with some people who read some unspecific generalities
and half-truths. I've seen others do it elsewhere much better
than Stebie, years ago. In fact, with two decades of experience
in computer-modem communications (BBSs first, then the Internet),
I've seen a LOT of variations on a few themes of boasting and
bluffing. [21 years in December of this year]

>> Just like you harrangue Dave Heil over his service in the State
>> Department (all of it fact-based and verifyable), I shant give you the
>> pleasure. You can go ahead and insist "it didn't happen" based upon my

>> make it any less factual.
>
>just appling YOUR OWN STANDARDS Stevie

[Stebie is starting to get stressed, he is making typos and using
bad punctuation...:-)]

Tsk, tsk, tsk. In my personal case, I've got reproducible
documents (including a reduced size DD214 that I carry for fun
in my wallet), photographs (with mimeoed SigC legends on the
back), some of the mimeographed order sheets received in three
years (xerographed since the acidic paper would make them self-
destruct if handled...and copied courtesy of the Burbank, CA,
Social Security office), communications with those who were
THERE in my unit doing the same work I did, one of whom has had
an amateur extra license for a long time. What is worse, I've
tried to send a digitized copy of my first First 'Phone license
to Stebie and HE REFUSED to accept it. :-)

It would seem that Stebie ONLY accepts things that prove HIS
case. That's consistent with his newsgroup "battle plan" (or
whatever it is for trying to win message points) of MAKING
others accept HIS unspecific general claims.

>> > Stebie has claimed "working in military radio communications"
>> > but isn't at all familiar with the very common (quarter
>> > million R/T units made and operational) SINCGARS...(SNIP)
>>
>> Lennie, I guess it's silly to point out to you that SINCGARS is
>> NOT the end-all of radio communications in the Armed Forces.
>
>but you know nothing of the system where I a 54E know a afair about
>them, without having served a commo related MOS. make it very dubious

The SINCGARS "family" of R/Ts is now a QUARTER MILLION in number
of supplied and operational small-unit radios used by ALL
branches (USCG use unknown), primarily for land and land-air
tactical communications. They began operational life in 1989,
first in Korea. Designed and made by ITT, Fort Wayne, IN,
(other production by General Dynamics Land Division now
disbanded and reorganized), a QUARTER MILLION radio sets of the
same type exceeds every other U.S. military radio set/system in
number. Ever.

Stebie had five years of his service life to see one, yet is
"unfamiliar" with it. [the USMC does indeed use it, is using
it now in Iraq and Afghanistan, as is the USA] For that matter,
Stebie cannot recall/remember/mention ANY nomenclature of any
military radio except some MARS equipment, despite 18 years
claimed as a military radio whiz-bang. That's NOT consistent
with ANY radio-interested person. [Stebie is unfamiliar with
the HF-band AN/PRC-104 manpack in service since 1986 with
land forces...nice little "QRP" rig designed and made by
Hughes Aircraft Ground systems, operational with USMC and USA]

>> Your 3000th telling of yet another SINCGARS story does not make it
>> any more valuable than any other communications resource...Then, now or

>> in the future.

Tsk, tsk. A QUARTER MILLION radio sets is not "significant?"
How about a type that has selectable encrypted voice plus
selectable frequency hopping...both features making it quite
difficult to DF, almost impossible (in the field) to decrypt?
It's been in operational use for 16 years and will be
(eventually, but soon now) supplanted by the AN/PRC-150 by
Harris Corporation.

Tsk, only in Stebieworld (at the signpost up ahead) is a foot
soldier's secure communication means "insignificant!" :-)

>
>more stevie lies

True enough, Mark. Poor Stebie made a reply to Hans Brakob
writing "Sorry, Hans, MARS >>IS<< amateur radio." Brian
Burke then picked up on that and chided him. Stebie became
outraged and tried three ways from Sunday to rationalize it.
I went and looked for the DoD directive on MARS, found it,
posted the link, included a short-form history of how MARS
came to be (it was 'born' in the U.S. Army before WW2).

MARS >>IS NOT<< amateur radio but a MILITARY radio service,
an auxilliary or "affiliate" (the A in MARS), operates
OUTSIDE the U.S. ham bands, has its own callsigns. Amateurs
are volunteers for MARS activities. The Army wanted amateur
participation in the early radio days prior to WW2 in order
to improve its own radio abilities...which were improved,
indeed leap-frogged in technology advancement, by commercial
firms just prior to the U.S. involvement in WW2.

NONE of the pre- or post WW2 military radio communications
networks USED MARS for everyday tactical radio comms. During
the old Vietnam War times ('Nam ended 30 years ago), it was
a definite morale-booster for personal communications to
"stateside." There's no need of such morale-boosting service
now with the much-improved worldwide military communications
such as the DSN and satellite relay. MARS has shifted its

focus to become a tertiary communications system in case of
catastrophic events for the military but is now active as a
liason service to tie together other government communications.

>> > That's in very recent archives.
>> > Worse yet, it took months for Stebie to acknowledge that
>> > the Department of Defense directs MARS, even when given the
>> > link to the directive itself available on the Internet at
>> > the DoD website.
>
>you claimed otherwise

Stebie claimed that otherwise. :-)

I doubt that Stebie EVER went to the DoD website to find the
directive document. Anyone can. It isn't "classified."

>> It was never in question.
>>
>> Lennie is uttering a blatant falsehood every time he repeats this.
>>
>> Lying IS Lennie's forte. This is why Lennie H doesn't get the

>>
>
>Stevie just goes and on dening his own words

True enough, Mark. I think Stebie has actual ATTACKS within
his own mind where little voices in his head scream "they LIE,
they LIE, they LIE!" :-)

TRUTH is its own "admiration." TRUTH is "respectable."

A continual repetition of "LIE, LIE, LIE" in the face of proof
that anyone can view is a sickness on Stebie's part.

>> And the darned ironic thing is that I'm the one who usually jabs
>> Lennie, yet Lennie engages in all these "persoanl insult" diatribes at

>
>you must be reading a different Usenet than I am Stevie or be lying or
>delusional

Mark, I'd pick DELUSIONAL. Stebie's flipped out, gone bananas,
wigged out (he looks like he's ready for a hairpiece anyway).

"The truth is out there..." which is still true even if "X-Files"
ceased production. :-)

>> > >> The problem is you, Lennie, and just a few other ner-do-wells who

The delusional can only recognize the "truth" existing in their
fantasy. They have great difficulty with reality, therefore
cling mightily to their fantasy "truths."

>> > (UNSNIP)...one where
>> > everything is explained and laid-out, no room for deviation from

>> Even MORE ironic that I have never addressed you (or anyone) as
>> the "accuser"...that would be a LennieTerm. One that helps to
>> establish "victim status"
>
>more Steve evasion, and another lie you have called me on accusing you

Stebie attempted some wordplay in there, made like a "victim"
of a "false charge." :-) It doesn't work but he doesn't
realize it yet. :-)

Stebie constantly ACCUSES certain others of heinous things like
"LYING!" even though such things are truth. He can no longer
separate right from wrong, let alone emerge from fantasy into
reality.

>> > There is, nor has there ever been, a SINGLE "correct" way of
>> > doing things in amateur radio.
>>
>> There's been ONE constant in Amatuer Radio...
>>
>> The license.
>
>then why don't and why have you never treated other license holder with
>any respect?

Mark, you just don't fit Stebie's fantasyworld concepts. :-)

[note that Stebie misspelled "amateur" as "Amatuer" again,
something that is common with his upset/stressed state...]

To Stebie, ham radio is ALL about the LICENSE! Not the fun
of communicating, not the camaraderie of white male club-
house fun, not the interest in the radio hardware, it's the

LICENSE! That makes Stebie a SOMEBODY! He's "federally-
authorized!" Wow. What a concept!

>even if I granted you abuse of Lenn on that issue it doesn't explian
>your treatment of Myself of Todd and of Brain

Brian Burke, that is...but you are right, Mark, his comments
ARE hypocritical. It's his "PCTA extra Double Standard"
hypocrisy operational again...sigh.

>> The one you don't have...The one you CAN'T get.
>
>More Libel Steve the second half of the statement is liekly not true
>and you should know it is likely not true

You are right again, Mark. But Stebie is hot and fired-up on
his ATTACK mode again...as if any U.S. amateur radio class
license is "impossible for me to get." :-)

>> > Amateur radio is NOT a military...(SNIP)
>>
>> Your reality is slipping again, Lennie...
>
>no he is trying to guess at the nature of your twisted mind

No guessing...he's a bit nuts. I was making a comment that
U.S. amateur radio is NOT any sort of military service.

It isn't. It is a "service" insofar as a service of the
government to licensees. The word "service" all throughout
Title 47 C.F.R. is as a regulatory term denoting a type and
kind of radio use/activity in a particular Part.

>> You really stretch to make these up, don't you..?!?!
>
>not at all you seem to act like a drill sgt (whatever the fool marines
>call the army calls em that), and expect the rest of us are going to
>fall in

Stebie stormed into this newsgroup long ago acting like "super-
marine," a regular DILL Sergeant (my term), he of the pursed
lips (puckered from too much dill and vinegar) and tried to
make all of us who disagreed with him "drop and give me ten!"

Along the way his DILL Sergeant campaign hat got all askew
and he wound up barking orders to a bunch of blank walls.

>> > But, the old rank-status-privilege class consciousness of the
>> > old six-class license system suits the ordered, disciplined
>> > military psyche.
>>
>> You keep mentioning "military psyche" along with your 1950's-era
>> radio stories, Lennie...
>

>yes he does. your point?

Actually, Mark, I've mentioned 1960s radio, 1970s radio, 1980s
radio, 1990s radio, 2000s radio all along.

Stebie tried to MISDIRECT into "blaming his accuser" again. :-)

Poor guy still hasn't been able to separate civilian life
from military life. He still thinks he is SOME kind of
national service through his "amatuer" [sic] radio license.

>> > Radio is radio.
>>
>> No, it's not. Not in the APPLICATION.
>
>Radio is NOT radio Stevie? my, my you do need your meds

He won't take them, Mark. :-)

He still thinks that his DILL Sergeant barking can get all
those electrons, fields, and waves to do Stebie's bidding.

Tsk. The only reason there is licensing in amateur radio
is as a regulatory tool for the government, in this case
the FCC. All nations do that. Unfortunately, some take
this "amatuer" [sic] radio thing as a LIFESTYLE and magnify
it far beyond what it is...a hobby.

>> This forum is about AMATEUR RADIO...Not Army, or PLMRS, or GMRS,
>> etc etc etc.
>
>then why don't you write about Amateur Radio once and awhile

He's having too much fun gabbling and boasting about MARS and
CAP and the murines and stuff where he was a SOMEBODY! :-)

>> Big snip.
>>
>> > One MUST look at what other radio services are doing. Firstly,
>> > amateurs must co-exist in the EM spectrum with all other radio

>> it.
>
>you operate that way, Jim N2EY is politer about but operates that way

True enough. Stebie thinks I am "growing" opinions because
they "sprout?" :-)

He's a case...mental case growing worse. Terribly fascinating
to watch his psychosis develop over the years, much better than
classroom learning in psychology. His blabberings are more and
more black-and-white, no shades of gray. Emotionally more
volatile than a vial of nitroglycerine. :-)

nit pik

I know in Edmonton, Alberta there is at least one Chinese male and a fairly active group of Philipino's. Also some women. But yes predominantly in Edmonton I'd say at least 80% are white male.

I do not recall seeing any folks at the meetings who were black or East Indian. In the Edmonton demographics there aren't many blacks but there are a fair number of East Indians.

BTW there are a considerably number of hams in their 20s and 30s. I'd say a third or so of the executive of the larger organizations is in that age bracket.

It is very difficult to guess but I would expect a significant number of
people to take the Tech & General at the same time as there is only a small
jump in difficulty level so that their original licenses will be General.
In any classes that I teach, that will be the approach that I take and I
will have a syllabus geared towards that goal. If you are familiar with the
"Now You're Talking" study guides from the 1992 era, you will recall that it
covered both the Novice written and Technician written. It actively
encouraged students to take the road of studying for both writtens (and
code) and take all the tests. I'll take the same approach. This way the
material that is repeated between the Tech & General needs to be studied
only once.

However, it wouldn't surprise me to see Extra eventually become the largest class under the upcoming system.

>on you went about your business, independent of others expectations or demands.

You spent time in hail? Hail, hail, the gang's all here?

No, no, NO, good sir, in HERE one MUST "demonstrate dedication
and committment to the amateur community" by CONFORMING to old,
trite, archaic standards and practices!

In other words, one has to simply LOVE (and cherish, til death
do you part) MORSMANSHIP! It's the "amateur way!"

>Back then, it was considered poor form to not allow others their personal
>opinions, beliefs and prejudices.

Yah, yah, bin dere, done dat.

Remember, I "hail" from an earlier time. However, when I first
got "into" radio, HF radio at that, tube amps still tuned up by
"dipping the plate and peaking the grid." Half a century later
there are STILL HF transmitters with tube finals and they STILL
tune up "dipping the plate and peaking the grid!"

Sunnuvagun!

>Since I made it though that time, I accepted that NOT all others could be

>a GOD) and placed between my ears to allow me to realize all of this.

Ah, yas, me too. BUT...this be Mighty Macho Morseman hang-out
and Blog where you MUST CONFORM or they (the MMM) try to make
you die. Independent thought is NOT ALLOWED!

>Now it seems, others expect to control the opinion one forms of them--the
>future will see if they are successful or not... I think NOT!

Every generation spawns a new set of CONTROL FREAKS. Like leeches
they crawl in and try to suck blood from independent thought

processes. Or, they OD on "caffeinated drinks" and expect to piss on your grave. :-)

Or, they expect you to "take holy orders" at the Church of St. Hiram and take Vows of morsemanship while always obeying the papal bull from Newington. Amen.

<up Gregorian chant in BG, overlay credit crawl, take black>

>I am afraid we cannot grant you the benefit of the doubt, and the possibility
>you are only frugal with your money.

Nah. I'm a regular "Mr. Moneybags" who "got it all on investments"
according to our resident noise, er, nurse. :-)

Back in 1960 I was working for Ramo-Wooldridge in Canoga Park
and had decided to "upgrade" to a new set of wheels. Got a 1961
Cebby Impala convertible. [babe magnet and a half...:-)]
Had a great loan term from the company Credit Union. Then some
"downsizing" happened and I was looking for another job. Credit
Union said "no problem" on the loan, just keep paying on it,
which I did. Got another job. When that two-year loan ended,
I kept paying MYSELF the same amount into my savings account.

By 1966 I had enough saved to buy a new car, a 1967 Camaro SS.
Paid Ca$h for it. Haven't taken out any auto loans since, not
for the '70 Camaro or the '82 Camaro Berlinetta, and now the
new Malibu Maxx.

Am I bragging? No. I'm illustrating a point in directed
THRIFT. I'm not frugal, just disciplined insofar as ca$h is
concerned. And I've had some unforseen expenses from an early
personal tragedy also.

>Since you now have refused all unreasonable requests for a sizeable loan, we
>must dismiss you as a "Tight A$$ED Dude", you will not be asked again! <grin>

Good! I've been taking "NO" lessons from Capital One.

I agree that the sentence could be interpreted to be a three year waiting period. That's certainly how I would read it too.

However when I review the Radiocommunication Information Circular RIC-3 - Information on the Amateur Radio Service as at http://strategis.ic.gc.ca/epic/internet/insmt-gst.nsf/en/sf01008e.html it is quite clear.

1.3 General Criteria for Operation on HF Bands
Privileges granted to amateurs with an existing authorization will be based on the following criteria:
(1) All Amateurs holding Basic and Advanced Qualifications will be allowed to operate on the HF bands below 30 MHz.
(2) Amateurs certified prior to April 2, 2002 will be allowed to operate on the HF bands below 30 MHz based on the experience and knowledge they will have acquired over this period of time.
(3) Amateurs certified after April 1, 2002, who have demonstrated a superior knowledge of operational, technical and regulatory requirements by achieving a mark on the Basic examination of 80% or above will be allowed to operate on the HF bands below 30 MHz.

Nothing there about getting automatic access to HF after three years
of getting your Basic license.

Tony

It's more a puzzler than anything else. In effect they are saying
anyone who's been licensed for three years at this point has experience,
while in the future 3 years experience is not sufficient.

It seems odd that if they feel a need to grandfather some, it's not
a blanket grandfathering at the time the new rules go into effect.
But given that they do specify a date, that would seem to be the case.

Of course, if this was the old days, they'd have to bring their log
in to show that they had a good three years of experience, rather
than just sitting on the license. Who can forget the old endorsement
for the amateur license that gave some limited HF phone, but you had
to prove that you had been active on HF CW in that time period.

I'm just really curious why they picked three years and not one.
The experience angle seems more to justify a partial grandfathering
than that experience can be generally traded in for HF priviliges.

I've only been a ham since November 2004 so I can't speak for the good old days.

But it would've made sense to me to get an examiner to sign off that you have some experience such as knowing how to use the PTT button, the DTMF on your keypad, participate in some nets without being disruptive and being able to program memories into your radio.

Somewhat seriously though I can see a practical exam being somewhat useful here.

Tony

2923. Codgers and Surgeries

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-31 09:40:07 UTC
From: Kardiac Korner <StentCity@Cumadin>
Message-ID: <dci681adp0@pita.alt.net>
Source record: 114283
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

Previous posters have commented that the HF bands are populated by Seventy-Somethings who oft compare their surgeries with their fellows. Well, this is not endemic to the HF bands.

Case in point. This afternoon three of the youth challenged Old Timers tied up a local repeater as they compared notes and even argued over whose heart surgery was the worst. They droned on and on about the incisions made in their legs, their chests, and even went into graphic detail about the drainage tube that had been implanted in one of their abdomens.

And it this was not depressing enough, one of the Codgers went on to regale the listeners with details of his wife's cancer and chemo treatments and detailed the prescription drugs his wife uses.

Come on, guys. My heart goes out to you, but MUST you discuss it for hours on end? On a repeater? Or anywhere? These oldsters are understandably caught up in their dilemma but someone, some day, is going to have to ask them to please, please, stop.

These Oldsters, all Extra licensees, have no idea how depressing it is to listen to them.

And, guys. When someone asks you how you are doing, don't go into an hour long history of your medical trials and health tribulations. Spare us the details and the resultant depression. Please?

> supposedly due to an "accident."...(SNIP)

Once again, Lennie's only got part of it right, but not enough to
be truthful.

I don't roller blade to start with.

"Physical prowess" is not required for flying a light civil
aircraft, and I know parapalegics who hang glide.

That having been said, even if I WAS getting the "medical pension"
you claim I am getting (I have never said any such thing, but you go
right on twisting it to suit your rant...) I'd have to be grossly
disabled to not do those things.

> (UNSNIP)...[accident unspecified] Now,

> whether in a ward or in the "ER."

Even if I were receiving the aforementioned "medical pension",
Lennie, the criteria for such a pension must be not being able to meet
MILITARY criteria for duty...Not civilian...

And thankfully I rarely have to "move" anyone in the ER...And when
I do, we have a newly implemented concept called "teamwork" that is
supplemented by "proper body mechanics" to effect safe moves of flail
patients.

> >> On the otherhand this post I am replying to is over 300 lines

Nope. Just pointing out that Lennie's well known for his "Don't
Say In 10 Words When you Can Baffle Them With 1000"...

Lennie's gift of gab hides his personal failures and
incompetencies.

More snip. Scroll back a post if you need to read all of his
blusteriness.

And put into service only 3 years before I left. They were NOT
that wekk known even in early 1992 in ALL aspects of military useage,
Lennie.

And again you show us the very narrow scope of experience you have
of communications, once again walking us down SINCGARS Lane.

More snippage of excessive bandwidth wastage.

> Stebie had five years of his service life to see one, yet is
> "unfamiliar" with it.

Nope. Wrong, wrong and more wrong.

For once you got some things right, Lennie.

> A continual repetition of "LIE, LIE, LIE" in the face of proof
> that anyone can view is a sickness on Stebie's part.

But YOUR lies are evident and documented, Lennie.

You ARE a liar, so I wonder why you get so defensive?

Take a clue from Markie there...He just ante's up to being a liar.

More snippage of same insults and defensive bluster.

> You are right again, Mark. But Stebie is hot and fired-up on
> his ATTACK mode again...as if any U.S. amateur radio class
> license is "impossible for me to get."

Obviously it is.

You said you'd get the Amateur "Extra Lite" "out of the box"...

You've never done it. It's quite apparent that your knowledge of
Amatuer Radio is inversely proportional to the distance from a
searchable resource.

And even then you manage to muck-it-up on regular occassion.

> He's a case...mental case growing worse. Terribly fascinating

Steve, K4YZ

2925. What is Ham Radio coming to?

Newsgroup: rec.radio.amateur.policy
Date: 2005-07-31 11:25:49 UTC
From: Polymath <invalid@invalid.invalid>
Message-ID: <42ecb4db$1_2@x-privat.org>
Source record: 114285
Cross-posted to: uk.radio.amateur,rec.radio.amateur.policy

Ham Radio has a well-regarded position in society as the
nest from which the engineers of the country fledge; but
what is its position today; and, do we wish to do anything
about that tradition?

1. We have a privileged position in that we are authorised both
to make and also to operate our own transmitters. No-one else has the
privileges of both and hence we are in a unique position. Do we wish
to preserve this status quo, or, are we happy that our numbers
are increasingly over-run by CB types, by which category I mean those
who buy their rigs ready-made off-the-shelf and even send them back
when minor repairs are needed?

2. Ham Radio has traditions of international gentlemanliness, but you might
think otherwise from reading these NG. The foul-mouthed infantile temper
tantrum is an increasing problem, and, as such, it reflects badly upon us.
Do
we wish this to continue, or should we set ourselves firmly apart from
such people AND REFUSE EVEN TO DISCOURSE WITH THEM,
THESE CHILDISH BROADCASTERS (CBERS), IN THESE NG?

3. The self-styled "national" society, in Britland at least, is going
through a
financial crisis as the _REAL_ Radio Hams leave in their droves when faced
with an influx of what can only be described as CBers. (How else can you
describe
a 6-year-old licensee who does not have the mathematical skill set to
deal with decimals, let alone the elementary transpositions that are
necessary
to deal with Ohm's Law?). Do we wish to have a society that represents the
technical aficionado that is the _REAL_ Radio Ham?

In short, do we simply stand by whilst the Mongolian Hordes of
Ne'er-Do-Wells
destroy what we and out predecessors have setup?

2926. Steve never lying at any time Re: doctors write worse? I doubt it.

AL-Queda, or any other terrorist group would use the hams bands anyway, they would go out to the local Wal-mart and buy GMRS radio off the shelves. Any terrorist, spy or what ever, isn't going to worry about going through the process of getting a license, or even applying.

What's all this childish, long running fuss about?

There's nothing whatever to prevent radio hams from carrying on in
their traditional, relatively well-ordered, self-disciplined ways.

There's plenty of room on the bands to share with a little more QRM.

And CB-ers cannot possibly interfere with use of soldering irons on
the kitchen table. There always has been obstruction by the XYL.

Just give it time and the more unruly band users will either fall into
line or change hobby to tropical fish.

English, Markie...You were almost "armchair copy" the last couple
days, but you're slipping again.

And you can't show a single line where I am "practiv(ing)
medicine".

I've not written anything libellous.

To what were you refering?

No one is required to build to their sets (at least no license that I
aware there are some odd byways in theworld) and the we do get tired of
the whining about how you used to have to blow the galls for your own
tubes over a hot fire

You mean this?
QUOTE:

First, if your doctor's writing can't be read, s/he's incompetent,
regardless of how nice a guy/gal they are. Not to mention they are
opening thenselves up to a hu-mongous law suit.

UNQUOTE

No libel there, Markie.

First of all, I said "IF" his/her writing can't be read...

Sorry Markie, but such modifiers are YOUR argument as to why YOU
are not "respoinble" for making such statements to me.

Secondly, as I said, AMA and JCAHO are the one's who call the
shots on legible physician orders. That's due to FDA requirements that
demand that script writers do so clearly and consisely.

> cutting stevie praticing med without a license again

You mean this?

QUOTE

Secondly, if YOU don't take the time to sit down with your doctor
and go over those medications to understand what each one is, it's
benefits, expected outcomes, potential side effects and possible
alternatives to their use, then you're the idiot I have always claimed
you are

UNQUOTE

What practicing medicine? There's not one word there that even
remotely suggests inappropriate professional conduct.

Show me the "practicing medicine" part. A diagnosis? A
prescribed threapy or medication?

As a matter of fact, it's considered absolutely accurate Patient
Education....(Other than the calling you an "idiot"...that was just for
fun)

You need to get a good proctologist to help you get your head out of it's present "up and locked" position, Markie...

As I understand it, the original proposal required an Advanced or 80% in the Basic, but records of pass marks don't go back all that far, hence the cut off date to avoid unfairness to anyone who can't find out their pass mark. Then it sounds like they tacked on the three year clause which makes that date irrelevant!

Vive la Canada!

It's a little late, isn't it Jim?

I find it interesting that South Africa was the first one to propose such a system, but I don't think the ZAs adopted it in the end. I have no trouble in principle with an alternative theory/code system, but how would you do it? Maybe Elements 2 and 3 + 20 wpm or elements 2, 3 and 4 to get full privileges?

It's all moot now anyway. We all know the NPRM will become the R&O.

There is one loose end, though. I read the NPRM to say that Tech+ would become closed, so that all new Techs would have to get element 3 to get on HF, but others have read it that all Techs would get Tech+ privileges. Does anyone know which is right?

My XYL (N3MKR) is a no-code Tech, but she will be taking element 3 anyway. Her object is to get a UK licence. As she is not a US citizen (neither am I), the only way for her to do that short of taking the UK tests is to get her General, which would entitle her to a UK Full licence. She isn't prepared to learn code to do it, but then neither is she in the least interested in getting on HF, or anything besides 2m FM as a matter of fact.

I reckon she could take her element 3 now (or could if she had studied, LOL!), as it shouldn't have expired by the time the R&O comes out. Hopefully, by the time she got her General the free lifetime licences should have been introduced in the UK, which would work out very nicely.

I have reverted to my original no-code call for the UK, as it is now a Full licence. For a while I held an 'A' call, G0VUK, obtained on the basis of my US Advanced as then was. Over there calls can only be re-issued to an immediate family member or to a club, and only with the licencee's permission (or next of kin). So, just for a laugh, I could let her have my A call while I now have a B (no-code) call, although I have passed 20wpm CW and she can't read code atall! That should wind up a few people.

I think you will find that resonance ACROSS the 40 mt. band is relative to
the "girth" of the fish rather than length.

Yours piscatorially KW.

At first reading the text is confusing. However after going over it several times, the FCC does explicitly state that Techs will have to take the simple General exam to get HF privileges. They state that since the test is simple, it is unwarrented to give Techs HF privileges.

Also on eHam, one of the posters states that he has called the FCC and gotten clarification that it is indeed their intent to require Techs to upgrade to get additional privileges. However I haven't confirmed if the poster has or has not called.

The best thing to do would be to read it yourself several times through (it is a bit confusing at first).

Ok, this is confusing. If she isn't interested in anything besides 2m FM, why is she upgrading and why is she interested in a full UK license since you are now residents of the US. Not that there's anything wrong with this but it doesn't make sense.

Mark, in your absence Steve has claimed to have been appointed to a
leadership role in Navy MARS on Okinawa. Yet Steve has displayed a
remarkable ignorance of MARS, all the while making outrageous claims
that, "Sorry Hans, MARS >>>IS<<< Amateur Radio!"

In the end, no one beleived him.

(Steve's accusations of having sex with dogs snipped)

Mark, in your absence Steve has claimed to have been appointed to a
leadership role in Navy MARS on Okinawa. Yet Steve has displayed a
remarkable ignorance of MARS, all the while making outrageous claims
that, "Sorry Hans, MARS >>>IS<<< Amateur Radio!"

In the end, no one beleived him.

(Steve's accusations of having sex with dogs snipped)

I think Steve took a quick glimpse of reality, then closed his eyes
tightly and went back to discrediting his fellow Extra's and his family
name.

And so it goes. Steve has the deserved reputation of the playground
bully on RRAP. But Steve is an adult and should put away childish
behavio[u]r. He won't because he is defective.

Hans, perhaps now amateurs can learn Morse Code without having
unnecessary distraction/hurdles to jump through like the 5WPM, 13WPM,
or 20WPM barriers.

How long will it take the code teachers and code advocates to catch on
to the concept, or will they coninue on with the stepped hoops?

"Stepped hoops"? In my experience, people tend to learn Morse not in steps, but by gradual increases. Granted that there are some "plateaus" (approximately 10WPM and 25WPM) but these are found to be related to the "mental mechanics" of learning.

Up to about 10WPM trainees can still "count the dits", so moving beyond that speed requires them to learn to recognize the "sound of the character" without deliberate "counting the dits". This is what makes the Farnsworth training method effective, in that the trainee is early acquainted to the "sound of the character" at the higher speeds.

The 25WPM plateau seems related to sublimating copying to a "middle conscious" level, where the characters flow at an almost sub-conscious level from the ear to the fingertip without active thought about the actual characters heard.

Tsk. I think Stebie thinks ALL should be concerned with Stebie's
demands! :-)

Note the use of "flailing" in place of "failing" in Stebie's
sentence. A Freudian slip of his mirroring his own FLAILING
about when he says all disagreers "LIE, LIE, LIE!" :-)

>> > > > > > > > > > (UNSNIP)...and I do have opinions about amateur radio issues.

Is Ripley's "Believe It Or Not" still published? If it is, we
ought to send Stebie's marvelous accomplishment to them for
wider distribution and acclaim!

You hit that one "bang on", Brian. Very plausible. :-)

Brian, you are too subtle for Stebie. He failed to notice your
plural form of "yourselves" (as in reference to multiple
personalities). :-)

Welp, Stebie has just admitted to hypocrisy. It used to was that
anyone talking back to Stebie "HATED ALL HAM RADIO!" Now Stebie
admits he is only "representing" HIMSELF (and all his personalities
of course). There's a tiny promise for optimists there. :-)

John, a whole series of postings in this thread seems to have
migrated over from rec.radio.amateur.homebrew. One over there
("Polymath") goes off some deep end every once in a while and
starts one of these brouhahas...sigh.

Reg Edwards is a long time UK ham and author of dozens of
excellent small stand-alone programs for specialized
calculations on ham radio technology. Reg has his own site
where these small programs are downloadable free. Good
stuff there!

There's a better chance they would use a cellphone with an ecryption
device then a radio, or get their information through carriers and
given the information in person. The encryption rules have been on the
books since the 30's. Amateur's can uses digital codes as well as
unspecified codes above 30 MHz.

N9OGL:

Well, they might pick up cell phones, I would caution them NOT to. There is no form of communications so well logged.

Also, each cell phone registers at each call with an assigned code which is kept track of--false codes are ignored... you don't make a call unless they know who you are and where you are...

No better way to locate someone than to have them carrying a cell phone, even when they think it is off it is finking on 'em and maintaining contact with the nearest 3 towers, if available, strange, but that is exactly the minimum number to triangulate their exact location...

Drug dealers are very, very leery of cell phones... too many have been busted for using 'em!

Like I said...

Maybe Morse can go back to being an encoding scheme, and Farnsworth can
go back to being a teaching method. And maybe without artificial
testing steps, Morse can develop more along the lines human learning
and consciousness.

b.b.:

The internet is wonderful. I just completed an exhaustive search and located that CW training tape in question, I downloaded it in .mp3 format and listened to it.

Don't bother with getting it yourself, when I played it, all it said was, "Grab a BEEG RADIO (cb & leen-e-air) and go to it, if you want to have fun.

Then it asked for a "donation" to be sent to the arrl for the tape!

There was also a disgusting ad on the tape (the background sounded like it had been recorded at a flea market), some old ham trying to sell bicycle seats which had only been sniffed one time before!

Keep your money!

Sigh, I hope to get to this level eventually. I'm at the point where I'm just starting to "hear" words like tnx, abt, the, fer, qsl, qsb, name, op, rst, etc. rather than spelling them in my head.

Bert casually remarked at the "self-improvment session", "I'm at the point
where I'm
just starting to "hear" words..."

My gawd man, we are making progress.

The first step is always the hardest--admitting you have a problem.

For right now, we have some meds to stop the voices, while we work on that
little problem.

Agreed ..... I was tuning across 75 the other night just too see if my old receiver worked ....heard some health stuff and a discussion on using a baseball bat for sexual satisfaction ..... oh well I guess this is the bum society ...ya know I never really heard or had a QSO on CW that I remember that dealt with health problems ..... although a fellow on the Isle of Mann would tell me about his hangovers on Saturday morning ......

JOHN:

My point is simply that there is better ways that terrorist and other criminal elements can communicate, amateur radio isn't on of them. The encryption rules in the amateur radio service (as written) are not need (or need to be modified) and in fact may hold amateur radio back, because there are some encryption technology that is more spectrum effecient.

John:

My remarks were not about disposable cell phones--which DO give more anonymity.

However...

Don't buy the phone with a credit card or check--don't buy it where they have cams and take a pic of you, beware of the cams in the parking lot, don't let the checkout person get a good look at your face (or, have someone else buy it for you), and drive over to another town (preferably far away) to purchase it.

However, they still know exactly where that phone is being used, what time it is used and who you are calling, the guy on the other end better have one too or they might go ask him who called him...

And, don't purchase them from the same store or chain store all the time, switch around!

And, it will still be keeping in touch with the cell towers, use it once and chuck it!

Other than those few "little problems", hey, real reliable communications there...

John

Nice try.

I've been battling the "age" thing for a bit. I had to take a job well below my capabilities, but I took a particular job. I was putting a pallet atop a stack of pallets. I put one end up one the stack, picked the other end and a kid came up and started to grab the side of it. I figured he wanted to help. Nope, he grabbed the pallet and pushed it atop the stack saying "take it easy; you're too old man!".

Well, I grabbed another pallet, picked the thing up and threw it atop the stack. Then I told him that neither he nor I had gloves and I didn't particularly wish to get any splinters in my hands. I should have challenged him to see who could do 25 push-ups in less time. Guaranteed I buryl him. 50 could be dicey if he was in good shape.

The next time someone says "we don't type anymore, we use word processors", I'm going to suggest they bring their best on. Microsoft Office or Star office. Either one. I can type 65 words per minute without error on a bad day with a hangover and can do a bit better if I get upset. I have pushed a teletype to 92 words per minute (on a 100 word per minute machine - dang thing fights you!). I can handle a little more than 65 on a simple keyboard. A fair amount more.

I can also add/subtract a few numbers faster than the kids can punch the numbers into a calculator. Found that out plenty of times.

Direct your whines to the extra-lights that only had to take a 5 word per minute exam. I took 20 (and passed) 3 times - once for my commercial telegraph ticket and twice for my extra (once in 1966 and once in 1993 after I let my tickets expire). BTW, the code doesn't really matter either. I've found that the kids that want to try and find a way to push the oldsters aside really want to find a way to artifically get a job; they often don't want to work. I know. I won't drive folks to work anymore after one guy was drinking a beer on the way *in to* work! No open containers in my car. No drugs, either.

Now, I am going to head off next week to repair a road sign. The pay isn't great, but not bad ($25.00 per hour). Hopefully, the problem won't be too bad (sign struck by lightning - the pc, apparently, works).

N9OGL:

I think my view on it was given away with the question (subject) of this thread...

Simply ignore the FCC rule, as long as you are an american and using encryption for a VALID PURPOSE (and that means NOT for terrorist activities), a valid purpose would be so no one (that included the gov't (think BIG BROTHER here) is listening in.

In any court of law, I do not see where it could be argued that radio is such a unique threat that encryption cannot be allowed there, yet can be done on the internet without regulation (other than you cannot share high security encryption software with other nations--and "God" himself knows that regulation is not violated!)

If you are a terrorist, they can hang you for your activities, and very rightly so...

Kardiac:

If the "powers which be" in the arrl all had their own hair and teeth, a much different mindset would be found in amateur radio.

Indeed, younger fellows would encourage more new hams to enter the hobby. I am sure arrl membership would go up by leaps and bounds also...

While the ancients run it, a lot stay far from the shadow...

Don't need to, Brain, as much as you'd like to think I do...You and Lennie will just go on doing those things that MAKE you "Brain and Lennie", and it's there for all to see.

I'd be interested in figuring out where you got that "Steve admitted ot hypocricy" thing, but then Lord knows where the two of you pull things out from...

But it was fun watching the two of you pat each others backs here again...Now if you'd just invited Markie and Toadie in, you'd have had the whole gang in.
